The vocal score was made up of the following persons: Miss C. Hugunin, soprano, Miss Mary Bristol, alto, A. Marechall and H. C. Boutwell, tenors, J. B. Thompson, baritone, J. G. Lumbard, basso. In October a local company, the Metropolitan Serenaders, gave a concert at Metropolitan Hall, and on the 17th of the month the Chicago "Freier Sangerbund," a new musi-cal organization, gave its first concert at North Market Hall. In this month the New York Italian Opera Company en route for St. Louis, New Orleans and other southern cities gave one entertainment at Metropolitan Hall. At the same hall November 21, the Philharmonic Society gave a concert, composed of classic and modern selections; this was conducted by Professor Bergmann and was a pronounced success. In the early part of this month the Ole Bull and Strakosch troupe again visited the city, playing to packed houses, and giving a rich and varied programme, which in excellence and style of rendition was of the very highest order. In the closing month of the year concerts were given by the Philharmonic Society and an Italian Opera Company, headed by Madam Rosa de Vries, who it will be remembered, sang here in the previous year.

It is worthy of note that in the year 1854 the first music printed in Chicago, from movable music type, was set in the composing rooms of the Literary Budget, by Joseph Cockroft; the words to the music being written by Francis Clarke. In January there appeared in the Budget a piece of music, a song—"It will be all right in the morning." The words were from the pen of the poet Benjamin F. Taylor, the music by J. Dyhrenfurth. Also another a few weeks later, "The Moonlight Serenade." This piece was composed and arranged by George P. Graff, of this city, and dedicated to Miss Anna M. Edwards, of Rockfort, Ill. The piece was sung by a club calling itself the Moonlight Har-

The year 1855 opened with a concert, by the Philharmonic Society at Metropolitan Hall, being a benefit tendered to Henry E. Lippert, the popular music teacher. In February came the Continental Vocalists at South Market Hall, and early in March the American Harmonic Opera Troupe appeared at Metropolitan Hall. In April, the Peake family of Swiss bell ringers, and a few concerts by local companies, made up the list. Among the leading companies here during the remainder of the year were, Madame De Vries, the Campbell Concert Company, M'lle. Theresa Parodi, the Hutchinson family, Christy's Minstrels and Adelina Patti. A notable local entertainment was given at Phelps's Burlesque Opera House, by Frank Lumbard's "Best Quartette in the World," which consisted of Frank Lumbard, J. G. Lumbard, R. Sylvia and M. J. Ritter. In January, 1856, the Ephonians, a local society,

In January, 1856, the Ephonians, a local society, gave a concert at the Metropolitan Hall, and in February an entertainment at the same hall was given by volunteer performers, for the benefit of St. Paul's Lutheran Church. In May the Alleghanians returned and appeared at Metropolitan Hall. In this month, too, M'lle. Theresa Parodi, assisted by Mme. Amelia Patti Strakosch and Mr. Arthurson, under the direction of Maurice Strakosch, gave two concerts, which were among the notable musical events of the year. June 27 Ole Bull, assisted by Adelina Patti, surnamed the young Malibran; Signor Morino, baritone; Louis Schreiber, cornet player, and Franz Rath, pianist, were at Metropolitan Hall. In July, at the same place, appeared Madame Albamowicz and Herr Ernest Jaeger,

pianist. August 20 and 22 the Pyne and Harrison English Opera Company gave two excellent concerts at Metropolitan Hall, the programme embracing selections from the popular English and Italian operas. In September a local company gave, at German Hall, a comic opera, "The Village Barber," and the papers also announced others in course of preparation. On the 29th Mrs. Emma Gallingham Bostwick, assisted by Henry D'Antin and W. H. Curry, and orchestra by the Great Western Band, gave a grand concert at the Metropolitan Hall. In November Henry Ahner began a series of Saturday afternoon concerts at this Hall, and on the 1th of the month M'lle. Theresa Parodi and company appeared for the second time during this season.

The only event of note in the closing month of the year was the appearance of a troupe, the New England Bards, in a series of holiday concerts. On Christmas night a benefit was tendered to Frank Lumbard, at

which the New England Bards assisted.

In this sketch of the growth of musical culture in Chicago, no attempt has been made to discuss it as an abstract theme. Glancing over the subject in its mere chronological presentation, the deductions are apparent, in fact unavoidable, that in the earliest days Chicago was made up of a music-loving people. The fact is also broadly presented that in this, as in everything which tends to ennoble, elevate and refine, its people have ever striven, and with that success born of earnest effort, to attain the highest standard of excellence. Marked as has been the progress in musical taste and culture from 1835 to 1857, the period treated in the present chapter, yet a still more surprising advancement remains to be noted in the succeeding years, the history of which must form a part of the other volumes of this work.

## EARLY LITERATURE.

WILLIAM ASBURV KENVON.—It is not strange that in the earlier history of Chicago there is a paucity of local literature. A people engaged in the work of building for themselves homes and habitations, in a comparative wilderness, and in reclaiming the soil from a state of nature, until it blossoms and teems with the fruits of their civilizing labors, have but little time at their command which they can devote to literary pursuits. Still, among those who were pioneers in this particular spot in the West, there were those who have left behind them works that are entitled to mention as being distinctively of those days. The writers were persons of education and culture, and possessed of intellectual attainments fitting them to adorn any of the highest stations in life.

It is impossible to notice the literary productions which appeared only in fugitive forms. Many of them were contributed by local writers to the magazines and newspapers of that day, either anonymously or under assumed names, which effectually buries in oblivion the identity of the authors. Those only which appeared in

book form can be referred to in these pages.

In the columns of the Gem of the Prairie, a literary paper published here as early as 1844, are to be found many poems which bear abundant testimony that their authors were gifted with true poetic instincts. But the first writer, so far as known, who published a book of poems in this city was William Asbury Kenyon. There is to-day in the library of the Chicago Historical Society a copy of this book, a small duodecimo volume, bound in cloth, looking not unlike a pocket edition of Cushing's Manual. Turning to the title page we read: "Miscellaneous Poems, to which are added writings in

prose on various subjects, by William Asbury Kenyon; Chicago, printed by James Campbell & Co., 1845." In his preface and speaking of the poems found in the work, the author says:

"I should indeed be culpable in augmenting the poetical flood (which, if the universal wish is universally attained, is likely to soon deluge the literary world) if I did not believe there was something of merit in the productions thus put forth. But while I am thus convinced, I am also assured there are some to which no important value will attach. \* \* \* As a whole, the collection has been designed for this community. The specimens here presented have spontaneously sprung and blossomed upon the prairie, and, it is hoped, if they possess either beauty or fragrance, will not, like the flowers which spring to greet us, become extinct by the hoofs of rudeness."

The preface bears date Chicago, January, 1845, although no evidence has been obtained that the author ever lived in this city; yet it must be inferred that he resided so near to it that, for all practical purposes, he could and did claim it as his home. To one of his poems, written in 1842, is a note appended concerning the gaiety of the society in the town of Warrenville, one of the oldest villages in DuPage Connty. And again in his preface the author has returned his sincere thanks to Captain Joseph Naper, Mr. Ellsworth and Mr. Skinner, all citizens of Naperville, for material assistance rendered in bringing out his book. To show the poet in his lighter and doubtless his happiest moods, as well as to express the character of his work, a few stanzas from a "Prairie Song" are given:

- "Oh, some may choose the forest glade, And some may love the sea, Others may seek the city's din: But none of these for me.
- "No hermit's cave, no crowded hive, No storm-tossed prison lone; But life at ease, in joy's own breeze, A prairie cot my own.
- "A prairie cot? What joys do not Come clustering around the charm; Scarce ripening fruits to autumn cling As pleasures hither swarm.
- "Dream, hunters, dream of seas of game, Unused to following hound; The generous Lord, his bounteous board, And plenty laughing round.
- "Dream of the home where hearts have room,
  Where nice restraint is not;
  Dream, dream of joy free from alloy,
  Found in the prairie cot.
- "Here, Clara, here love's mutual care Shall smile around our hearth; While hand in hand, we prove the land The paradise of earth."

The poet has also put into some rhythmic lines his impressions concerning the Black Hawk War, his views of which are here reproduced for the edification of those who have read the history of that bloody strife. Mr. Kenyon has entitled his lines, "Our Late Indian Hunt," a title strongly suggestive of the poet's grave doubts of the justice of the white men's cause "against the famished remnants of a murdered race."

- "Say: Did yon hear of Black Hawk's War, When nature's own was struggled for? Terror struck all the country through, Raised by aggression's bugaboo.
- "A few poor Indians, cornered up, Saw, day by day, the whites usurp Their lost game-grounds, their childhood's homes, And even profane their father's tombs.
- "They saw, they wept with deep, still grief: Hope held no prospect of relief; 'Farther, yet farther, we must go: Swim to new wilds, like buffalo!'

- "They bore in silence till their wives,
  'Whipped like the dogs, we loath our lives,'
  Till from their mouths was snatched their bread
  Till the last star of peace had sped.
- "Then roused they pride's expiring ray,
  Their thickening deaths to hold at bay;
  They roused for home, they stood for life;
  Peace heaped their wrongs,—wrongs called for strife.
- "Blow came for blow! The cry was raised, Behold, by savage fury blazed, The frontier wide in ruins lies," Death to the race, the aggressor cries.
- "Death to the race? Ves, when no more They turned the cheek, as heretofore, 'Tis 'savage fury' prompts the stand On the last hold of childhood's land.
- "Take back the term! The wild man's heart Abhors the deeds of savage art; Expiring, starved, they fled like deer; Still, still the gorgeless hounds pressed near.
- "Wiskonsan, and the Broad-Axe, tell Tales which your final dirge may knell A war! Alas! A ruthless chase For famished remnants of a murdered race."

Turning over the leaves of this quaintly written, yet really interesting, little volume, there are to be found many selections, the perusal of which would doubtless interest the reader. Indeed the author's merits as a poet must not be judged wholly from the character of his stanzas given; for the shorter poems are not his best efforts. Among the more pretentious ones are many really fine evidences of superior thought and grace of diction. Here is one, for instance, which in the very opening lines, seems to have caught the fresh breezy air of winter, the merry jingle of the bells, and the light, joyous mirth inseparably connected with the delights of a winter's night "Sleigh Ride."

- "Come! The moonbeams are glancing, the horses are prancing,
  The land-shallop waits at the door,
- The land-shallop waits at the door,
  Hearts akin to the lark, let us gaily embark;
  Heed Winter's keen pinching no more:
- "In Winter 'tis time to be gay;

  Love glows with its quickening ray;

  For the fresher the air, the more bright is the glare;
- For the tresher the air, the more bright is the glare;
  All ready;—now swiftly away

  "At the whips' sounding thwack, now we speed o'er the track,
  - 'Mid joyous confusion of bells And the shrill creaking of snow as we rapidly go, The mingling wild harmony swells.
- "The music of mirth is as light
  As rays from the army of night,
  When they play on the snow with a luminous glow,
  And radiate witching delight."

The poet drew his inspirations from the genial surroundings and amid the primal beauties of "our own Prairie State." He has left behind him evidences that he was a man of thoughtful and observant mind, that he possessed an apt appreciation of the beautiful in art and of the grand and sublime in nature. That he has studied man with his faults and his follies, his virtues and his vices; and, running through all his poetry, there is much of a plain philosophy, which although in homely phrase, is pure in its teachings, and leaves no doubt that he wrote to better, to elevate and to refine, and to grave "the living virtues on the heart."

JUDGE HENRY BROWN.—Passing from the field of Poetry to the more practical one of History, it is a source of pleasure to note the fact that, in this most important domain of literary work, Chicago was early represented. In 1844 Henry Brown, a Chicago lawyer, and a Judge, wrote a work, which was at that time, doubtless, not only the most complete history of Illi-

nois but also of the Northwest Territory. Although put forth as being only a history of the State "from its first discovery and settlement" to the time at which the book was written, yet it contains almost necessarily a full and comprehensive account of the earliest explorations in the Northwest, together with brief histories of those sanguinary contests for the control of this territory, which for years raged between the French and English nations. The history of this region from its formation as a Territory to 1845 is fully and exhaustively given. The story is well told, being written in easy, narrative style, and so embellished with incident that the usually dry historic details are invested with almost romantic charm and interest. In fact the book is as pleasant and entertaining as the facts treated of are useful and instructive. The book was written at a time when the author was busily engaged in the practice of his profession (see Bench and Bar), but it was well done, with a careful detail attending the selection and arrangement of matter, and with a patience and closeness of inquiry, which illustrates the author's conscientious regard for the truth. Not that the history does not, in the light of subsequent research, contain many errors, both as to dates and in the correctness of its subject matter, yet no one would be warranted in the assertion that Judge Brown did not make the best use of all available means to secure accuracy. Moreover, he did the work at a time when it was needed; and, with whatever imperfections it may have possessed, it met the popular want, was appreciated by those who read it, and it still lives a modest but enduring memento to the memory of its author, who was an able lawyer, a just Judge, and an impartial historian.

RICHARD L. WILSON,—In 1842 a little book of tracts, from the pen of Richard L. Wilson, the wellknown journalist, made its appearance, and met with public favor. The book was entitled, "A Trip to Santa Fé," and was a graphic description of a country about which at that time comparatively little was known. A few years later Mr. Wilson published another small volume, "Short Ravellings from a Long Yarn," which met with quite as hearty a reception as did his first production. Like its predecessor, this was also a book of travel, and contained a well-written account of a trip made by its author by the overland route, then a long and perilous journey, to the newly discovered land of

gold. MRS. JULIETTE A. KINZIE.—An interesting book is "Waubun, or the Early Day in the Northwest," by the lady whose name appears at the head of this article. Herself one of the early pioneers of the West, a woman who had the historical distinction of living in the first house built in Chicago, of remaining here until she saw the fort and its few straggling houses grow to a thrifty little town, and, later, of witnessing its rapid and truly marvelous strides as a city, she was eminently well qualified in her later years to put into narrative form her personal reminiscences of early life in this region. But what enhances more than anything else the value of the book, is its importance as a faithful history of persons and things as they were in Chicago a half century ago. True, to the citizen of to-day, it reads like a romance, and to those who have never experienced "life on the frontier," it seems hard to realize that the story of Waubun is not a tale of fiction, rather than an authentic account of life, and in those times. But the well-known character of the author, and her connection with the oldest family in Chicago, aside from her own early residence here, leaves no more room for doubting the truthfulness of the narrative than for disputing the

authenticity of the book itself. Indeed, neither has ever been questioned; but after reading its interesting pages, one lays the book down with the thought almost involuntarily expressed, "it is true; and verily truth is stranger than fiction." The thrilling and pathetic account of the massacre of 1812, as told by Mrs. Kinzie, who obtained her facts concerning it from a relative who was an eye-witness and in a degree a sufferer from its horrors, has been read by thousands. Waubun was first published in 1855, but the edition was soon exhausted, and about ten years later, in accordance with a popular demand for the work, a second edition was printed, which was speedily sold. To-day the book is out of print, and copies of it are difficult to obtain. The author has years since gone to her reward; but in Waubun her name and character, as well as those of many of her associates in the early days in the Northwest, will long be preserved in this tribute to the memory of those brave pioneers who paved the way, and laid the foundations of what has since become the great metropolis of the West. See history of the Kinzie

family on page 98.

T. HERBERT WHIPPLE.—As a writer of short stories, sketches, reviews and biographies T. Herbert Whipple, still a resident of Chicago, early won for himself a reputation, which at that time augured well for a brilliant literary career. And while he wrote much which served to convince the public of his decided talent in a literary way, it is to be regretted that he so soon abandoned his purely literary labors to engage in the routine duties of editorial work on a daily paper. Mr. Whipple's father, Thomas P. Whipple, came to this State in 1836 from Buffalo, N. Y., and settled on a farm about thirty-five miles west of Chicago. Here the subject of this sketch, who was six years of age at the time of his arrival in Illinois, grew up and remained until 1852. He then began the publication of a temperance paper in St. Charles, which was subsequently removed to this city, and became a prominent temperance organ under the name of the Temperance Messenger. In 1854 Mr. Whipple was made the editor of a literary weekly, published in this city by W. W. Danenhower and called the Literary Budget. He remained here until 1856, when he resigned his position, on account of the paper being changed from a literary journal to a political organ, espousing the doctrine of Know-nothingism; a political faith to which Mr. Whipple did not heartily subscribe. January 10, 1854, Mr. Whipple married Miss Mira B. Fuller, a lady of St. Charles, and with her returned to his father's farm, that year, following the quiet pursuits of a farmer until 1857, when he took a position as night editor and local reporter on the Democratic Press of this city. From then until 1861 he was engaged on several of the city papers, but on the commencement of active hostilities in the South, he was sent to the front as the war correspondent of the Chicago Tribune. In that position Mr. Whipple discharged his duties so well, and his enterprise and ability as a writer and gatherer of news attracted so much attention that, at the close of the war, he was offered a position on the New York Herald, and shortly afterward became its city editor. In two years a change in the force of that paper was effected, new influences controlling. Mr. Whipple resigned his position and returned to Chicago. Mr. Storey offered him a place on the Times, which he accepted. His next move was the establishment of a private detective agency; and from that time up to 1878, he edited newspapers at Galesburg, Ill., Vidalia, La., and Denver, Col. In the last named year, his health failing in the West, he

MUSIC. 503

returned to Chicago and entered the employ of Captain Turtle, as a detective, superintending his business and assisting upon the Penny Press at Cleveland, Ohio, until 1882, at which date the Mooney & Boland Detective Agency, of New York, established a branch agency here, and he accepted the position of superintendent, a place he still holds (1884). As editor, from 1854 to 1856, of a paper that ranked as the leading literary journal of the West, he was better acquainted with the writers of the country than most men at that time. Among the more noted of his own works, in fact the one which, perhaps, gained him most reputation, was a novelette, "Ethzelda, or Sunbeams and Shadows," published as a serial in the columns of the Literary Budget. It was a tale of the prairie region as it once existed, and was subsequently issued in book form by Rufus Blanchard, who then had a publishing house on LaSalle Street, and also in Philadelphia by a prominent publishing house. The story deals with a band of robbers and counterfeiters whose headquarters were in a large cave in the banks of the Mississippi, somewhere on the western boundary of the State of Illinois. Its dramatic arrangement is very good, the incidents as interesting and exciting as the nature of the tale would suggest. In addition to this, Mr. Whipple contributed a great number of short sketches to the columns of the Literary Budget, together with book reviews and biographical sketches of the then leading writers of the West. Among the latter was an extended and ably written article on the life and writings of that popular novelist, Emerson Bennett. This article was widely read and copied by the leading papers of

the country.

W. H. Bushnell.—Previous to and contemporary with Mr. Whipple, and also a popular writer and contributor to the paper of which he was editor, was a gentleman, by profession a civil engineer, William H. Bushnell, then of this city. This gentleman, aside from being a poet of acknowledged ability, a sketch of whose life, together with specimens of his poetry, can be found in "Coggshall's Poets and Poetry of the West," was a pleasing and graceful writer of prose stories, sketches, Indian legends, etc. He was born in the city of Hudson, N. Y., June 4, 1823, and was educated at the University of New York City. He was first announced as a poet in the year 1843, when he delivered, before the Young Men's Lyceum of Chicago a poem entitled "Knowledge is Power." He then lived in this city engaged in the practice of his profession, but found, it seems, time to contribute to the columns of the Gem of the Prairie, and later to the Literary Budget, stories, poems, and graphic sketches of Indian life in the West. He was also connected in various capacities, editorially or otherwise, to many other Chicago publications. Under the pseudonym of "Frank Weber" he wrote a novel, "Prairie Fire," first published in the Garden City, which was well received throughout the West; in fact so popular did it become that it was printed in book form, rapidly ran through six editions, and is to-day found in the trade. Subsequently he became one of the editors and contributed largely to the Sunday Leader, the proprietor of which was the now public printer, Hon. S. P. Rounds, who was also the publisher of the Printer's Cabinet, for which Mr. Bushnell has continuously written for over a quarter of a century. Leaving Chicago for New York, just prior to the war, Mr. Bushnell then devoted his time mainly to authorship. He became a contributor to the best literary publications, and has written many serial novels, sketches, poems, etc., which have made his name familiar throughout the land. As a writer of passionate fiction he may justly be proud of the name he has won;

as a writer of Indian romance so great an authority as B. P. Shillaber ("Mrs. Partington") has declared he had no equal since Cooper; and Mrs. Ann S. Stephens that his "Indians were too good and true to their subtle character to be appreciated by the masses" and that "each of his poems contained a sufficient number of beautiful similes to exhaust any author." He has been twice married

A writer in the Criterion for August, 1882, said:

"Haste of composition has much marred the literary work of Bushnell. All of his productions reveal this, and it is to be regretted. He has written an amount scarcely to be credited, his other engagements considered, and still accomplishes far more than many a younger man, and one who has all his hours at command. Yet, as a rule, he has written strong, well, and with a wonderful command of language and illustration; his serials exhibiting a deep insight into the mature passions of the human heart, and his poetry the love of the beautiful and tenderness of a woman."

Mr. Bushnell is now engaged as a proof-reader in the Treasury Branch of the Government Printing Office at Washington, a position his years of newspaper life have well fitted him to fill. He still finds time to write much for the Press.

HENRY A. CLARK.—Another writer of those days, also an occasional contributor to the literary journals, was Henry A. Clark, an attorney of this city. Mr. Clark wrote, among others, a novel, the "Banditti of the Prairie," which was published early in the fifties, though at that time its authorship was credited to Edward Bonny, a then noted detective who lived in Du Page County, near what is now Prospect Park. Later, however, it became well known that Mr. Clark was the anthor. The book had an immense sale, and at once took its place among the popular romances of the day.

Benjamin F. Taylor, whose literary works have long since given him more than a national reputation, was for many years a resident of this city. For thirteen years he occupied an editorial position on the Chicago Evening Journal, during which time he wrote much that contributed to the fame which has since been accorded him as one of the most graceful and pleasing writers in the West. Mr. Taylor was born in the town of Lowville, Cass Co., N. Y., in 1822. His father, Stephen W. Taylor, LL. D., was president for many years of the Madison University, at Madison, N. Y. The son received a good education and, coming

Benj. W. Faeglor

West while yet a young man, began life surrounded with all the generous possibilities of a new and growing His writings early attracted attention, and were distinguished by an originality of thought and a vigor of style hitherto almost unknown in the literature of the West. Among the earlier poems written by Mr. Taylor, and which at once gave him prominence, were: "Rhymes of the River," "June Dews," "Shall I Know Her Again?" "God Bless Our Stars," and "The World's Embodied Thought." In 1855 a volume of his editorial writings, entitled "January and June," was published in New York, and a few years later a second edition was issued by a firm in this city. Mr. Taylor now lives on a farm in northern Indiana, from the quiet seclusion of which he contributes occasional articles to several of the leading periodicals in the East, as well as to various journals in this and other States.

WILLIAM ROUNSEVILLE, who began, in October,

1845, the publication of the Western Magazine, the first literary periodical published in this city, was a writer of rare and versatile talent. Bits of poetry, charming sketches in prose, historical reminiscences, and wellwritten fiction, all flowed from his ready pen; and into whatever field he entered, he treated his subject with a grace, vigor, and thoroughness which bespoke the rarest qualities of intellectual strength and culture. Aside from his editorial duties, he contributed a great number of articles to his magazine, which well deserve to be preserved as among the best specimens of early literature in the West. In the initial number of the Magazine, there appear credited to his pen the following articles: A charming sketch, "The Pioneer of the Prairies;" a well-written article on the "Arms and Armour of the Ancients," a subject which he carried through all the numbers in the first volume; an historical sketch, "An Incident of the Revolution;" and two short poems, "They Bid me be Sad," and "Can the Mother Forget her Child?" The pages of every number teem with the fruits of his prolific pen. Among the other contributors to this periodical were W. H. Bushnell and Judge Brown, whose works have already been noticed in this chapter. The Western Magazine lived but one year, when it was discontinued, and its editor turned his attention to journalism, but later engaged in the publication of an Odd-Fellows' Menthly. Mr. Rounseville then removed to Peoria, where he remained several years. He again returned to this city, living here until his death, in 1878.

### ARCHITECTURE.

The first house built in Chicago from plans drawn by an architect was the residence of William B. Ogden. In the fall of 1836, Mr. Ogden, being then in New York on a visit, employed the services of J. M. Van-Osdel, an architect of that city, in drawing plans for a dwelling which he proposed building during the following year. Hs also induced Mr. VanOsdel to come to Chicago, in the spring of 1837, and personally superintend the erection of the house. This residence, which was still standing at the time of the fire of 1871, was the finest and most attractive in the city. It stood in the center of Block 35, Kinzie's addition, and was bounded on the east by Rush, on the south by Ontario, on the west by Cass and on the north by Erie. The building was of the Grecian style of architecture, and was almost square, two stories in height, the roof surmounted with an observatory, while on two sides were recess-porches flanked with large ornamental columns, Mr. VanOsdel, after completing the building, decided to make Chicago his home and is now living here. Not long since he began a series of articles on the "History of Chicago Architecture," which were published in the Inland Architect, a monthly journal of this city. In the first paper are found the following interesting recollections, stated in the third person:

"Mr. VanOsdel arrived early in June of 1837. Passing from the landing toward Mr. Ogden's office on Kinzie Street, he noticed a block of three buildings, three stories high, the fronts of which had fallen outward and laid prone upon the street. Upon inquiring he found that the frost of the preceding winter had penetrated to a great depth below the foundations, and the buildings, having a south front, the sun acting upon the frozen quicksand under the south half of the block, rendered it incapable of sustaining the weight of the building. At the same time, the rear, or north part, of the block, being in shadow, the frozen ground thawed gradually and continued to support the weight resting upon it. The consequence was that the block careened. Mr. VanOsdel's first work in Chicago was to readjust the floors in this block, which, at first designed for stores, was completed for dwelling houses, \* \*\*

The brick buildings in the city in the spring of 1837 were the Lake House, on the southeast corner of Rush and Michigan streets, a building about eighty by one hundred feet, four stories hight, the St. James church, a pretentious semi-Gothic structure, with a square brick tower, located on Cass, between Michigan and Illinois; William Norton who built the first bridge across the river at Dearborn Street, had a two story brick residence on Indiana, near Dearborn Street; there were two stores, two stories high, on North Water Street near the foot of Cass. These, with the frontless block first mentioned, included all the brick structures in the North Division of the city. There were but two brick buildings in the West Division, one a two story dwelling, corner of Jackson and Canal streets, owned by Laframboise, an Indian chief; the other was Archibald Clybourne's residence, in the (then) extreme northwest corner of the city. In the South Division was the court-house, on the northeast corner of the public square, having a basement and principal story, dimensions about thirty by sixty feet; the court-room and jury rooms on the principal floor; clerk's and recorder's offices and vaults in the basement; the front was ornamented with a four-column Doric portico of wood work."

On the opposite corner, where the Sherman House now stands, was the City Hotel, and north of that, on Clark Street, was a two-story building occupied by Peter Pruyn, and the "Saloon Building," which was four stories high. It was discovered, after the roof was put on, that there were no chimney tops, and not a flue in the building, and they were constructed afterward inside the walls, as they were needed. There was a three-story building on the southwest corner of South Water and LaSalle streets; also a three-story dwelling, southwest corner of Randolph and Wells, owned by Charles Chapman, and a two-story dwelling, southwest corner of La-Salle and Washington streets, the property of P. F. W. Peck. The foregoing comprises all the brick buildings in Chicago in the spring of 1837. In that year the principal builders in the city were A. D. Taylor, Azel Peck, Alexander Loyd, Peter L. Updike, Charles Lowber, Asbel Steele, F. C. Sherman, Alson S. Sherman, and William Worthington. In his second paper Mr. VanOsdel continues as follows:

"Among the very few buildings that made any pretentions to architectual ornament were the residences of W, H. Brown and John H. Kinzie in the North Division, and of Dr. John T. Temple and George W. Snow in the South Division. Mr. Snow was the inventor of the 'balloon frame' method of constructing wooden buildings, which in this city, completely superseded the old style of framing with posts, girts, beams and braces. The great rapidity in the construction and the large saving in cost, compared with the old fashioned frame, brought the 'balloon frame' into general use. It is conceded that a frame with every part spiked together offers greater resistance to lateral force than any other method of construction. As an evidence of its power to resist such force it may be stated that the 'Bull's Head Hotel,' built by Mathew Laffin in 1848, at the junction of Ogden Avenne and Madison Street, was a three-story 'balloon frame' of large dimensions. Standing upon the open prairie, with hardly a building within a mile of it, this structure was exposed to the fierce, unbroken prairie winds, yet remained unshaken for many years, until it was taken down to give place to the Washingtonian Home, which now occupies its former site."

The balloon frame, however, proved its dangerous character in the fire of 1871, since which time, the erection of frame buildings within the city limits is forbidden by law. That confagration destroyed nearly every building in the city which had been erected before 1838, only a few which had been removed to the outskirts of the town being left. Among them was a block of buildings which formerly stood on Lake Street, but were, long before 1871, removed to State Street, near Twelfth. The corniced pediment of these buildings was of the Grecian-Ionic order; the broad entablature, under the front eaves, was surmounted with a frieze, ornamented with oblong quadrangular openings, which besides serving to adorn were also utilized to light the attic story of the building. In 1839 this was the finest business block in the city.

The difficulties and obstacles which faced the archi-

tect and builder in the early days of Chicago have now long since disappeared; indeed many of them are almost forgotten by the builders of to-day. The most serious difficulty encountered was in the character of the soil and the low elevation of the original surface of the ground, on which the main part of the city is situated. As is now well known, the strata underlying the city was first a black loam soil, varying in depth from one to two feet; underneath was a bed of quicksand, three to four feet in depth, resting on a stratum of blue clay, which was almost impervious to water. In wet seasons it was next to impossible to dig trenches for foundations, as the water would fill such excavations to the surface; drainage was out of the question, owing to the low and level surface of the ground; and, owing to the water-tight stratum of blue clay, already mentioned; the only resource of builders was to wait until the ground became dry and firm by the slow process of evaporation. In consequence of these difficulties many of the earlier frame buildings of Chicago were built on posts, sunk into the ground and resting on the hard clay, which under the circumstances furnished the best foundation to be had. The convenience of having a cellar under a building was practically impossible. Mr. Van-Osdel on this subject says:

"In 1849 the owner of a brick building on the southwest corner of Lake and State streets determined to have a cellar under his store. He made the necessary excavations, and succeeded in planking the bottom and walls with three-inch plank, with caulked and pitched seams, rendering the basement water-tight. The depth was about five feet. Upright posts were placed between the floor and ceiling to resist the upward floating tendency of the cellar floor; but it was soon discovered that the hydrostatic force was more than equal to the weight of the principal floor, and all the goods resting thereon; and an upward movement of the interior of the building was manifest. The ark was scuttled and filled in with earth, thus ending the first attempt at cellar construction in the business portion of our city."

Prior to 1852 there were few brick buildings noted for architectural beauty. The majority of them were conspicuous for their plain and simple style and for the utter absence of anything tending to embellish or adorn. In those days, men who built had not the means to indulge in architectural ornament nor any other extravagance; hence four walls, well roofed, properly lighted and ventilated, and partitioned into suitable apartments answered every purpose. However, as Mr. VanOsdel observes, "the increase of wealth and prosperity in after years permitted these same men to indulge their latent taste and desire for the beautiful, in causing the erection of many business edifices that would ornament and adorn any city in the world."

Another difficulty in the way of constructing elegant and permanent buildings in early times, was the scarcity of suitable stone for building purposes. The nearest quarries were located at Joliet, a distance of forty miles, and before the opening of the canal, in 1848, the only means of transportation was by wagons. The Scammon school building, which was built in 1846, had its caps, sills and water-tables cut at these quarries, from which they were transported across the country by teams to Chicago.

The Tremont House (see Chapter on Hotels), which was eighty by one hundred feet in dimensions, and five stories in height, was furnished with cut stone from the quarries at Lockport, N. V., as was also the court-house, built in 1853. In May, 1855, the system of sewerage (q. v.) was devised which led to the elevation of the street grades; and a few years later, the Tremont House, notwithstanding the size of the building and its massive character, being built wholly of brick and stone,

was placed on jack-screws and elevated to a level with the new grade. The distance necessary to raise it was seven feet. This remarkable undertaking was safely accomplished, and a new basement was constructed under the building. To better enable the reader to understand the importance of elevating the grade of the city, for the purpose of promoting its architectural and sanitary advancement, reference is made to the topic entitled "Street Improvements," which will be found elsewhere in this volume. But as has already been indicated, until this elevation of grade was accomplished, the difficulties to be met in the construction of large buildings were of the most serious and aggravating character.

The court-house (q. v.) was of the Roman Gothic style and was a handsome and well-proportioned structure. It stood in the center of the public square and was one hundred and sixty feet front from east to west, and one hundred and thirty-two feet in depth from front to rear. The county jail was in the basement, offices, court-rooms, etc., on the upper floors.

In filling the square about the court house up to the required grade, it was essential that the lighting and ventilating of the jail apartments should not be interfered with. To avoid doing this "an area wall was built on a circular plan, one hundred and eighty feet in diameter, and circumscribing the entire building." It was built three feet above the street-grade with a coping of heavy cut stone, the whole surmounted with heavy iron railing. This arrangement gave ample space for light and air in the basement of the building, while the surrounding yard was filled with dirt obtained in dredging the river.

The first brick building in the city to be raised, by means of jack-screws, to the new grade, was a brick store, situated on the northeast corner of Dearborn and Randolph streets, and owned by J. D. Jennings. This was done in 1859, and the work was done by James Brown, of Boston. Two years later an entire block of buildings on Lake Street, extending from Clark to LaSalle, was raised by the same process simultaneously and without damaging the block in the least. The business of raising stores and blocks continued through a period of seven years, from 1857 to 1864.

The first churches of Chicago (see Religious), while exceedingly plain and simple in style and construction, as compared with the costly and magnificent edifices of the present time, were yet buildings in which was displayed a decided taste in architectural design and finish. The First Universalist church on Washington Street, between Clark and Dearborn, built in 1844, was a frame building, resting on a stone foundation six feet in height. The building was of the Ionic order and cost near \$3,000. The First Methodist church, completed in 1845, was then one of the most beautiful and spacious church edifices in the city. Two plans for the building were drawn by Mr. Sullivan and Mr. VanOsdel, and the church was built embodying features from both designs. It was of the Doric style of architecture, though the entablature was void of any ornament. The other churches in the city, belonging to the same school of architecture, were the Tabernaele church, built in 1843, on LaSalle Street, and the Unitarian church on Washington Street, built in 1840. The latter was rather a handsome edifice, being erected at a cost of \$5,000. St. Mary's church Catholic), erected in 1843, on the corner of Wabash Avenue and Madison Street, was an imposing structure, built of brick, with stone foundation, and was one hundred and twelve feet long by fiftyfive feet in breadth. The side walls were thirty-four

feet in height. Twelve feet of the length in front was devoted to a portico, or recess porch, supported by six Ionic columns, which order of architecture prevailed throughout the entire building. Another building of the Ionic school was the First Baptist church, built in 1844-45, on the corner of Washington and LaSalle streets. The St. James church, built in 1836, was a large and handsome building of the English Gothic style-one of the first houses in the city constructed on this order of architecture. Rush Medical College q. v., erected in 1844, the plan of which was drawn by Mr. VanOsdel, was a heavy massive building of the Roman order. From its center arose a huge circular dome, which gave to the structure a marked resemblance to the roof of that celebrated Roman edifice of ancient times, the Pantheon. The Second Presbyterian church, which was built in 1849, was, from an architectural standpoint, a splendid and imposing edifice of the English-Gothic style. A peculiarity about it which made it almost a famous building was the character of the stone of which it was built. Its walls were constructed from a limestone rock, taken from the quarries near this city, and was the first building of any importance constructed of material thus obtained at home. This stone was filled with a black, bituminous substance, strongly impregnated with petroleum, which from the action of the sun exuded from the pores of the stone, and, running down the face of the walls, gave to the edifice an appearance strikingly peculiar and antiquated. The house was regarded as a curiosity, and sightseers in the Garden City were always shown, as among its objects of interest, the Second Presbyterian church. It was destroyed in the fire of 1871, but the stones, uninjured by the heat, were removed, and to-day form a part of the walls of a church since created on Wabash Avenue.

Having thus noticed the character of the early architecture of Chicago, its subsequent growth and development are subjects which logically belong to a later period, in the history of which it will be fully and

appropriately treated.

## ART AND ARTISTS.

Samuel M. Brooks, who was here as early as 1833, was the first artist in Chicago. He subsequently removed to California. In 1845 he offered for sale the paintings then owned by him, to enable him to indulge in European study.

In 1842 Mrs. Strangman advertised in the Daily American that she was prepared to give instruction in

music, painting and ornamental needlework.

J. L. Porter, a miniature painter, had a studio in the Exchange Building. His advertisements show that he

remained here from 1845 to 1847, and possibly

R. M. White, an engraver, was also a lover of art work, and in 1845 received a complimentary notice in the Democrat.

In November, 1850, Powers's "Greek Slave" was exhibited at Tremont Hall, and aroused much discussion as to the propriety of the nude in art.

A large painting entitled "Christ Healing the Sick," was exhibited here in 1850, but did not receive profit-

able natronage

The dagnerrean artists at that period were C. C. Kelsey, 136 Lake Street, P. Von Schneidau, 122 Lake Street, and John Hunter, at 85 on the same thorough-fare

Charles Peck painted a panorama of the Mississippi and scenes from Chicago to the Pacific, in an early day, which was exhibited in this country and Europe.

Monsieur Andreu, an excellent artist in landscape work, resided here in 1854-55. In the latter year he painted and exhibited a representation of the Garden City, in four sections. His views were taken from the observatory of the Tremont House.

Monsieur Montel, an artist in monochromatic drawing, oil and water colors, also a teacher of the French language, in 1854 had his studio at 84 Dearborn Street, opposite the theater. In the next year there were C. V. Bond in the Exchange Building, C. E. Cridland at 189 La Salle Street, E. S. Lennox and W. W. Pendergast at 131 Lake Street, H. D. Theilcke in the Metropolitan Block; of this number, Mr. Cridland excelled in landscape pieces. He painted that year for Robert Fergus a piece of this kind, which was pronounced a very fine painting. Mr. Fergus exhibited it at the State fair, where it received the award of being the best landscape work on exhibition.

St. Alary, an artist of some note, was here in 1856, and later. Among his pieces which attracted much attention, and which were painted in this city, were "Contemplation," "Calypso," the "Spanish Belle," the "Canadian Belle," and "Child at the Brook."

J. Healy, an excellent portrait artist, in 1856-57 had his studio in the Exchange Building. An item in a number of the Democratic Press of that time, says that Mr. Healy had painted portraits of William B. Ögden, E. L. Wadsworth and wife, Dr. Brainard and wife, Mrs.

E. Tinkham, and many others.

In October of that year, a very fine painting, "An English Farm-yard," by J. F. Herring, was brought to this city and exhibited in a room rented for the purpose at No. 10 South Clark Street. Each animal in the picture was painted from life. The painting which was valued at \$3,000, was pronounced the best which at that time had ever been brought to Chicago.

## BENEVOLENT, LITERARY AND SOCIAL SOCIETIES.

### MASONIC.

Who was the first Freemason to become a resident of Chicago, is a difficult question to answer, and one that is not essential to the history of the fraternity in the city. Masons in the segregate may do a great deal by personal example, but the increase of the Order, and the dissemination of its recognized principles and doctrines, only become practicable upon the organization of a lodge, and its establishment as a working body.

The primitive germ, the first "sprig of acacia," planted in the soil of Illinois, was the lodge established at Kaskaskia by a dispensation from the Grand Lodge of Pennsylvania, dated September 24, 1805, and at their meeting on December 14, 1805, the lodge received an auto-baptism, which gave it the name of Western Star

Lodge.

The officers of this first of Illinois lodges were James Edgar, W. M.; Rufus Easton, S. W.; Michael Jones, J. W.; Robert Robinson, S. D.; Alexander Anderson, J. D.; William Arundel, secretary. Thomas J. V. Owen, a subsequent Chicagoan, was a member of the lodge in 1826. The first initiation of record in the State was that of Charles Querey, who took the Entered Apprentice degree in this lodge, on February 3, 1866, Upon September 13, 1866, the lodge assembled under a charter dated June 18, 1866, from the Grand Lodge of Pennsylvania, wherein the lodge was established as "Western Star Lodge, No. 107."

The Order increased and multiplied, and at a convention held at Vandalia, December 9, 1822, a Grand Lodge was instituted, whereof Shadrack Bond was Grand Master. This Grand Lodge\* lasted until about 1828, but received the homage of several of the Illinois lodges during its continuance, as they withdrew from the various Grand Lodges by whom they were constituted, and paid tribute unto the Masonic Cæsar of

Illinois.

Until 1835, from the date of the discontinuance of the Grand Lodge, the history of Masonry in Illinois is a tabula rasa. The supposition is that "they lived and moved, and had a being;" but their existence was overt, their motions unattended with publicity, and their being emulative of the cryptic status of the early Christians at Rome. History records the fiery trials, the unjust opprobrium, the bigoted antagonism that were heaped upon Masons in these years, inaugurated in 1826; and Illinois Masons apparently bowed their heads before the tornado of blind passion and fury that swept over the country, disbanded their organizations and waited until the calm light of reason should again have assumed its dominance. The last to surrender its existence was "Western Star Lodge, No. 107."

In 1835 the dispersed brethren commenced re-uniting, and the impetus this year given to the Masonic fraternity has but gathered momentum with each succeeding year; the light then kindled has burnt with a

steady, lambent, increasing flame.

\*Richard J. Hamilton was G. J. W. in 1824, †The History of the Grand Lodge of Illinois, by H. G. Reynolds; and the proceedings of the Grand Lodge, from 1840 to 1860, have been invaluable in the compilation of this topic. On February 24, 1838, is the first instance of a corner-stone having been laid with Masonic ceremonies in the State; Equality Lodge, No. 102, having performed that office for the public works at Shawncetown.

One word of explanation is necessary relative to the numbers borne by the early lodges of Illinois; they derived their charters from various Grand Lodges, and took the numbers from the category of each specific

source of being.

On April 6, 1840, at the Masons' Hall, in Jacksonville, a convocation assembled and formed the Grand Lodge of Masons of Illinois, said Grand Lodge having a constituency of one hundred and twenty-seven members in a segregation of six lodges. In 1841, Stephen A. Douglas was elected Grand Orator, but was unable to serve. He was at the time Junior Warden of Springfield Lodge, No. 4.

Upon October 4, 1841, charters were voted to lodges at Dixon, Chicago, and Joliet upon their complying with Section six of the by-laws of the Grand Lodge. In the case of the Chicago Lodge, the by-laws would appear to have not been obeyed, as no charter is recorded

as having been issued.

Dr. William B. Herrick, subsequently Master of Oriental Lodge, took the third degree on January 29, 1842; he having been initiated June 16, 1841, and passed June 21, 1841. The lodge to which he belonged at this time was called Mount Moriah, No. 33, but was chartered as Hillsboro Lodge. Dr. John T. Temple also appears September 24, 1842, as a member of Far

West Lodge, No. 29.

LAFAYETTE LODGE, No. 18 .- At the meeting of the Grand Lodge on October 2, 1843, LaFayette Lodge, of Chicago, under dispensation, was represented by L. C. Kercheval, and on this date the charter was granted to LaFayette Lodge, No. 18, and Kercheval admitted as its representative to the Grand Lodge. He was subsequently appointed Grand Steward; being the first Chicago Mason who held a position in the Grand Lodge. The dispensation for LaFayette Lodge was recommended by Joliet Lodge, No. 10, and was granted on October 2, 1842, by the Grand Master, but the lodge did not meet until June 13, 1843, when their organization was perfected by the installation of officers. At this ceremonial there were present: N. Hawley, W. M. Juliet, No. 10; Samuel H. Gilbert, W. M.; T. W. Smith, S. W.; Carding Jackson, J. W.; L. C. Kercheval, secretary, pro tem.; Isaac Haight, treasurer, pro tem.; John Davis, S. D., pro tem.; Joseph Fischbene, J. D.; F. A. Howe, tyler; and J. H. Sullivan and William Harman, M. M. The names appended to the by-laws are: Samuel H. Gilbert, Carding Jackson, H. W. Bigelow, Samuel J. Lowe, L. C. Kercheval, John Davis, J. Fischbene, F. A. Howe, Barnabas Horton, William Harman and John Ferns. The first raising was that of P. T. McMahan, but the date is unknown. On October 16, 1843, John Ferns was elected tyler. On December 18, the following officers were elected: Carding Jackson, W. M.; H. W. Bigelow, S. W.; Mathias Taylor, J. W.; Samuel J. Lowe, treasurer; L. C. Kercheval, secretary; John Davis, S. D.; Joseph Fischbene, J. D.; F. A. Howe and "Barney Horton," stewards; John

Ferns, tyler.

The following comprise those who were raised to perpendicularity in 1844 by LaFayette Lodge: W. B. Snowhook, J. L. Howe, on the third Monday in January; E. L. Sherman, William Sheer, February 17: Samuel J. Surdam, February 20; \* J. J. Huntley, A. C. Taylor, P. P. Robinson, Valentine A. Boyer, March 18; Cornelius Lansing, March 25; Thomas Brooks, April 1; A. Getzler, June 3; Isaac N. Arnold, June 17; John J. Jackson, August 20; Joshua Bell,† September 2; Isaac P. Hatfield, October 1; John B. Irvin, November 4; Charles R. Starkweather and William S. Brown, December 2; Lot Whitcomb, December 3; Virgil H. Eachus, December 11. June 17, a semi-annual election was held resulting in the choice of Carding Jackson, W. M.; H. W. Bigelow, S. W.; M. Taylor, J. W.; Samuel J. Lowe, treasurer; L. C. Kercheval, secretary; John Davis, S. D.; Alfred C. Taylor, J. D.; John Ferns, tyler; R. Chester and R. J. Hamilton, stewards. September 2, Kercheval resigned as secretary and Valentine A. Boyer was installed as wielder of the instrument "that is mightier than the 'tyler's sword." On November 18, William Jackson was initiated, no charge being made for the degree; it being conferred gratuitously upon the son in recognition of the services of the father—Carding Jackson. On December 2, 1844, the lodge endorsed a petition for the establishment of a new lodge; this petition to the Grand Lodge being, presumptively, for a dispensation for Apollo Lodge, No. 32. December 16, 1844, an election was had resulting in placing Carding Jackson as W. M.; M. Taylor, S. W.; Samuel J. Lowe, J. W.; H. W. Bigelow, treasurer; William S. Brown, secretary: Thomas Brooks and George B. Fearing, deacons; Captain J. Jackson and I. P. Hatfield, stewards, and I. P. Hatfield, tyler.

In 1845 the officers of LaFayette, No. 18, were Carding Jackson, W. M.; M. Taylor, S. W.; Hart L. Stewart, J. W.; H. W. Bigelow, treasurer; C. G. Wicker, secretary; Isaac P. Hatfield, S. D.; Thomas Brooks, J. D.; B. Horton and J. L. Thompson, stewards; N. Christy, tyler; R. J. Hamilton and Henry Brown, past-masters. In 1846 the officers were Richard J. Hamilton, W. M.; Mathias Taylor, S. W.; Hart, L. Stewart, J. W.; H. W. Bigelow, treasurer; C. G. Wicker, secretary; I. L. Thompson, S. D.; Thomas Brooks, J. D.; Abraham Kohn and J. Y. Sanger, stewards; I. P. Hatfield, tyler. The officers for 1847 were Mathias Taylor, W. M.; Charles G. Wicker, S. W.; J. C. Miller, J. W.; H. W. Bigelow, treasurer; Abraham Kohn, secretary; Thomas Brooks, S. D.; Philip Newberg, J. D.; J. L. Thompson, tyler. In 1848, the occupants of official positions were Carding Jackson, W. M.; Isaac N. Arnold, S. W.; J. C. Miller, J. W.; H. W. Bigelow, treasurer; Isaac P. Hatfield, secretary; Philip Newberg, S. D.; J. L. Thompson, J. D.; V. W. Potter and John B. Weir, stewards; Nathan Christy, tyler; and the lodge had ninety-four members. The lodge in 1849 had the following officers: Carding Jackson, W. M.; J. C. Miller, S. W.; Philip Newberg, J. W.; H. W. Bigelow, treasurer; I. P. Hatfield, secretary; Jacob Gauch, Jr., and William A. Begole, deacons; Heman Hatch and J. G. Howe, stewards; Nathan Christy, tyler.

In 1850 the offices were filled as follows: J. C. Miller, W. M.; Philip Newberg, S. W.; R. E. Goodrich, J. W.; H. W. Bigelow, treasurer; I. P. Hatfield, secretary; George Cowper, S. D.; William McMillan, J. D.; Martin Dodge and H. R. Taylor, stewards; John Daly, tyler; and eighty-four members were represented by the annual contributions to the Grand Lodge fund; and the following list comprises the names of Master Masons of LaFayette Lodge, No. 18, not heretofore mentioned: Samuel McKay, James McGuire, N. F. Butler, Samuel Aikins, A. Garrett, Leonard Falch, Duane J. Surdam, Francis Edwards, James Campbell, John Blackstone, Joseph Atkinson, J. F. Colby, M. L. Knapp, J. W. Dun-lap, Levi Rosenfelt, William Locke, Daniel Lyons, W. B. Smith, D. S. Cady, Joseph Filkins, Scott Benedict, Matthew McIlvaine, G. Wetherbee, N. W. Watson, S. J. Huntley, B. Nietschmann, Jacob Rosenburg, J. A. W. Donahoo, Frederick Weis, W. H. Dobson, George Chacksfield, Solomon Kellogg, W. H. Wells, John Pfund, F. Burckey, Joseph Goodrich, Jacob Rosenbaum, J. M. Lowe, Theodore Hubbard, James McCord, J. D. Jennings, James A. Marshall, David Sheppard Smith.

In the proceedings of the Grand Lodge for 1847 occurs a peculiar case; that of Isaac P. Hatfield, of LaFayette Lodge, No. 18. It appears that he was summarily suspended from Apollo Encampment, by receiving notice October 5, 1846, and in said notice his attention was called to a resolution, purporting to have been adopted by the Grand Lodge, declaring that suspension from an encampment carried with it suspension from all lower degrees. The Grand Lodge, upon being petitioned by Hatfield on the subject, decided that the resolution had never received deliberate sanction and was

therefore void.

APOLLO LODGE, No. 32 .- The first authentic notice concerning Apollo Lodge, No. 32, and Oriental Lodge, No. 33, is in the proceedings of the Grand Lodge for 1845; at which session Rev. W. F. Walker, of Oriental Lodge, and William Stuart, of Apollo Lodge, both under dispensation at Chicago, were admitted as proxies of Joliet Lodge, No. 10. At this session the Grand Master reported granting dispensations to Apollo\* and Oriental lodges; and charters were recommended to be granted them under the numbers thirty-two and thirtythree respectively. Messieurs Stuart and Walker, at the request of the Grand Lodge, rehearsed the lectures in the first and second degrees; as recited, they were commended by the Grand Lodge and unanimously adopted for the work in those degrees. Whereby Chicago was complimented, and again was distinguished by the election of Rev. William F. Walker to the office of Grand Master, and William Stuart to the office of Grand Orator.

The directory for 1845 specifies that Apollo Lodge was instituted by dispensation from the R. W. D. G. Master, November, 1844, and that the officers were William Stuart, W. M.; John R. Case, S. W.; Cornelius Lansing, J. W.; Charles Follansbee, treasurer; William H. Adams, secretary; C. R. Starkweather, S. D.; C. C. Norton, J. D.; Rev. W. F. Walker, chaplain; James A. Marshall, L. Mower, G. Wadhams, stewards; and G. Wadhams, tyler.

The charters for Apollo, No. 32, and Oriental, No. 33, must have been granted this session, as on November 8, 1845, the Grand Master granted a dispensation to

<sup>\*</sup> Samuel Johnson Surdam is the oldest living Mason (September, 1883) made in Chicago.

† Johnson Bell experienced some difficulty in arriving at the degree of Master Mason. He took the F. A. degree, but during his recipiency of the F. C. degree allowed some atheistical proclivities to dominate over his responses; whereupon he was led forth by the article provided for that purpose. Subsequent investigation and explanation demonstrated has eligibility and he successively took the remaining two degrees. Vide paragraph on Anti-Masonry.

<sup>.\*</sup> The dispensation was granted to William Stuart, W. M.; John R. Case, S. W.; and Cornelius Lansing, J. W.
† The charter for Oriental Lodge was dated October 9, 1845.

FAC-SIMILE OF First Diploma known to have been issued to a Chicago Mason. The original is on file in the office of the Grand Secretary of the State

Apollo, No. 32, to pass and raise John Wentworth; and reports having, upon the same day, consecrated these

lodges and installed their officers.\*

The following is the earliest list on record of the officers and members of Apollo Lodge, No. 32; and is the list for the year 1846: John R. Case, W. M.; Cornelius Lansing, S. W.; Charles R. Starkweather, J. W.; Charles Follansbee, treasurer; William H. Adams, secretary; J. Herman Bird, S. D.; Carlton Holland, J. D.; James A. Marshall and Joseph Keen, stewards. The tyler was not a member of the lodge. Past Masters were William Stuart and John Barney; and the Master Masons were: John Brinkerhoff, Charles H. Larabee, Joseph C. Brautigam, Adam Gibbs, John A. Ruckhart, J. Milo Strail, M. Leopold, Lyman Mower, E. W. Herrick, Charles R. Vandercook, Alonzo G. Huntington, Sylvester N. Rice, William M. Jackson, James Long, John Wentworth, L. W. Clark, Edward R. Harmon and Cyprian C. Norton.

The lodge made no report to the Grand Lodge for the year 1847, but presented the following statement, on

the date designated:

in this vicinity.

"CHICACO, September 23, 1848.

" To the Most Worshipful Grand Lodge of the State of Illinois: "The undersigned, officers of Apollo Lodge, No. 32, held in the city of Chicago, would respectfully represent that, in the spring of 1847, Apollo Lodge made an agreement with Oriental Lodge, whereby the two lodges might be consolidated, and thereby form one lodge, more respectable as to numbers and more economical as to expenses than if two distinct organizations existed. Besides, the wants of the fraternity did not require so many lodges

"In accordance with the above agreement, and with the con-sent and by the advice of the M. W. Grand Master, Nelson D. Morse, the members of Apollo Lodge, as per our returns, severally dimitted from the lodge, June 25, 1847, and soon afterward the majority of them became members of Oriental Lodge.

"A sufficient number dimitted to reduce the remaining mem-A sunction number influence to the detail the renaming interest as per our report, to the first three officers; since which time Apollo Lodge has held no meetings, nor has it had in the opinion of the fraternity, an existence as a lodge. Our charter has been removed from the lodge room, and has been for more than a year at the disposal of the Grand Lodge. The unexpected absence of the W. M. last year prevented any action being taken upon it at your last Annual Communication. The officers are willing to abide by the decision of the Grand Lodge, either to return their charter or to place it in the hands of some person appointed by

your honorable body to receive it.
"The officers would state that they have no funds or property remaining in their hands belonging to the lodge, and that the books of the lodge, placed in the hands of the Senior Warden for safe keeping, were, among other things belonging to him, unfortunately destroyed by fire during the present summer; that they have

but their charter and the usual fee to return.
"The officers would therefore respectfully petition your honorable body to relieve them of their responsibility and enable them to connect themselves with other lodges, and thereby enable them the better to enjoy the privileges of the Masonic institution.

"And that your honorable body will direct us in relation to our charter, either to return it to the Grand Secretary or place it in the hands of some appointed person, your petitioners will ever pray.

"John R. Case, W. M.
"J. Herman Bird, S. W.
"J. A. Marshall, J. W." †

And at this date, October 3, 1848, the charter of Apollo Lodge, No. 32, was directed to be returned to the Grand Secretary. Hie jacet Apollo! yet though here he sank to rest, he awoke with the Orient; and as under those auspices shone with a steady, lambent flame, constantly increasing, steadily growing, until the light of Oriental Lodge, No. 33, is disseminated amid the Chicago of six hundred thousand inhabitants.

ORIENTAL LODGE, No. 33.—LaFayette Lodge, No.

<sup>9</sup> As a matter of general Masonic history, it may be remarked that the creed that it is indispensable for a Mason to believe in the Deity was this year fulminated by resolutions in Illinois bodges. Selection of the Case and Bird subsequently joined Oriental, No. 33, and Marshall remained with LaFayette No. 18.

18, by the accretion of members, became perforce endowed with the maternity of Apollo, No. 32, to relieve herself of the super-abundant Masonic clientel. Notwithstanding this fact, by July, 1845, LaFayette Lodge was again unduly distended by membership, beyond the number recommended as the maximum by constitutions and the Grand Lodge; a number of the members consequently decided upon instituting another lodge, among whom were William B. Herrick, J. V. Z. Blaney, George Davis, W. H. Davis, William Henry, Hamilton Hough, C. L. Schlatter, W. S. Brown, S. W. Sherman, Samuel Hoard, W. F. Walker, Reuben Tayler; these Masons signing the petition to the Grand Lodge and being the charter members of Oriental, No. 33.

A dispensation was granted August 8, 1845, and the first meeting was held August 9, 1845; whereat were William F. Walker, W. M.; William B. Herrick, S. W.; C. L. Schlatter, J. W.; J. V. Z. Blaney, S. W. Sherman, W. H. Davis, Hamilton Hough, members; W. H. Adams, Charles R. Starkweather and J. R. Case of No. 32, visitors. The dispensation was read, by-laws

adopted and Oriental Lodge launched for the East.
ORIENTAL LODGE, No. 33.—On October 9, 1845,
the charter was granted by the Grand Lodge of Illinois to Oriental Lodge, No. 33, with the three senior officers therein named as at the first lodge meeting. On December 20, 1845, the following officers were elected: J. V. Z. Blaney, W. M.; William B. Herrick, S. W.; C. L. Schlatter, J. W.; Samuel Hoard, treasurer; George Davis, secretary; Hamilton Hough, S. D.; T. A. Stewart, J. D.; W. H. Davis and S. W. Sherman, stewards; W. F. Walker, chaplain; Isaac P. Hatfield of La-Fayette, No. 18, tyler.

December 19, 1846, the annual election was held with this result: James V. Z. Blaney, W. M.; George Davis, S. W.; C. L. Schlatter, J. W.; Samuel Hoard, treasurer; L. P. Hilliard, secretary; George Ryer, S. D.; Nathan C. Geer, J. D.; William W. Mitchell, chaplain; W. H. Davis, and S. W. Sherman, stewards;

J. L. Thompson, of LaFayette, No. 18, tyler.

Upon April 26, 1847, a committee consisting of J. V. Z. Blaney, George Davis and C. L. Schlatter-the three senior officers of the lodge-was appointed to deliberate with a like committee from Apollo Lodge, No. 32, upon the feasibility of consolidating the two lodges, and on May 26 this committee reported favorably upon the project. Pursuant thereto on June 28, twenty members of Apollo Lodge presented petitions for affiliation, which were after reference to the proper committee, accepted. The case of Isaac P. Hatfield, before referred to, was acted upon by Oriental Lodge at this meeting; the lodge declaring, by resolution, that the record of Apollo Encampment having declared him expelled, Isaac P. Hatfield was "expelled." On December 17, however, a communication was received from the encampment stating that I. P. Hatfield was not expelled, whereupon the resolution was rescinded and ordered expunged from the record. Just what Oriental Lodge had to do with the matter is unknown; the decree of the Grand Lodge was averse to his expulsion, and he was a member of LaFayette, not Oriental, Lodge. Election was then had, with the result as follows: George Davis, W. M.; W. H. Davis, S. W.; J. A. Reichart, J. W.; J. V. Z. Blaney, treasurer; L. P. Hilliard, secretary; R. V. M. Croes, S. D.; J. H. Pahlman, J. D.; W. Mitchell, chaplain; John Daly and S. W. Sherman, stewards; J. L. Thompson, tyler. This year the lodge had thirty-four members.

The election of December 15, 1848, made the following officers: George Davis, W. M.; William H. Davis,

S. W.; J. A. Reichart, J. W.; A. G. Burley,\* treasurer: L. P. Hilliard, secretary; C. Drake, S. D.; J. H. Pahlman, J. D.: William Barlow, chaplain; J. Herman Bird, J. V. Z. Blaney and William B. Herrick, stewards; N. Christie, tyler. Forty members were the quota of the

lodge this year.

On December 21, 1849, the annual election resulted as follows: J. Herman Bird, W. M.; L. P. Hilliard, S. W.; Carlton Drake, J. W.; A. G. Burley, treasurer; Peter A. Lantze, secretary; W. H. Adams, S. D.; P. Ballingall, J. D.; J. V. S. Blaney, C. R. Starkweather and George Davis, stewards; J. Daly, tyler. The officers subsequent to these years are contained in the hand-book of this lodge. The members this year numbered forty-six.

The preceding pages exhibit the officers and membership of the two lodges that endured until 1850, and in thus showing their constituency the early Masons of Chicago are displayed; the apostles whose teachings and practice laid the foundation for the edifice, "not made with hands," that adorns the city of the present. They had their periods of sunshine and storm, their moments of doubt and their times of assurance; in fact, a storm was raised about the ears of Apollo, No. 32, in 1845, because it was deemed this lodge had too much

assurance.

The casus belli was this: A. B. Lewis, a musician, genealogically descended from a Cherokee by an African paternal progenitor, for two years or so a resident of Chicago, duly qualified with a diploma from an acknowledged Grand Lodge, was admitted a few times to the lodge of Chicago as a visitor. Those who remember the bitterness of the pro and anti slavery factions, will readily understand how the chivalric tentacles of the Southern lodges retracted with horror, at the spectacle of a negro bowing before the Holy Altar at the mention of the name of our common Father. The Chicago lodges said, the half Indian, half negro, was an undoubted brother Mason, a modest, worthy man who came under the tongue of good report, and how his exclusion from any lodge to which he might apply for admission and display his credentials, would comport with the respect due to the Grand Lodge whose diploma he presented—one of the most intelligent and respectable bodies of Masons in the United States—was a question difficult of solution. But Apollo, No. 32, piled Ossa upon Pelion; by the entertaining of petitions from John Johnson and Davidson, barbers in Chicago, of commingled Anglo-Saxon and African blood, reputed of free birth and certainly of good report, for degrees in this lodge; said petition being presented at a regular communication held May 2, 1845, and referred in the customary manner. On May 5, however, a special meeting was held, and a resolution adopted, instructing the committee to whom the petition was referred not to report until after the next meeting of the Grand Lodge in October proximo, in order that an expression of opinion might be had from the Grand Lodge. The intention of Apollo Lodge appears to have been to ignore color lines, but it was a little timorous as to the result of its action.

On November 21, next following, at a regular communication, with W. M. William Stuart in the East, the committee upon said petition reported favorably; but the delegate to the Grand Lodge having stated that the Grand Lodge had not expressed any dictum on the matter, a resolution was unanimously adopted, allowing the petitioners to withdraw their petitions and to resume their status as profane persons, de novo. It was also desired by the Master of Apollo Lodge, that it might be made a matter of record; that at the time of this action, no instructions had been received from the Grand Lodge with which the action of the lodge was inconsistent. But the lodges uprose in their wrath, headed by Harmony, No. 3, who, for the nonce, was the Até of the Masonic confederation. Circulars were sent to each lodge asking for an expression of opinion; the question of a Black Lodge was gravely discussed; committees met, acted and parted; one gravely stating that "the Author of all has placed a distinguishing mark upon them (the negroes, clearly indicating that there was a distinctiveness to be kept up," etc. The tempest was full of acerbity, rancor and harsh sentiment, and was distinguished, in the main, by anything rather than the comprehensive charity that should extent from the nadir to the zenith. The whole fact appears to be that the Chicago lodge was some years ahead of time. It is surmised that the antagonism engendered by the pioneer abolitionism of Apollo Lodge, No. 32, led to its disintegration. Apollo was the deity before whom darkness fled; and Apollo, No. 32, made quite an illuminative innovation upon the pro-slavery ideas of that period.

On October 1, 1849, the Grand Lodge held its session for the first time in Chicago, and on February 10, 1850, the record of the proceedings was destroyed by fire, in consequence of which a special session of the Grand Lodge was convoked at Springfield, April 8, 1850, to restore records, etc., destroyed. This session of the Grand Lodge was christened, on this account,

"The Grand Lodge of Recovery.

One act of justice requires to be performed to the memory of Nathan C. Geer; he is reported upon the hand-book of Oriental Lodge as expelled; he was expelled, but was restored by Grand Master J. H. Hibbard June 16, 1857, to good Masonic standing in the fraternity, upon the unanimous petition of the lodge, \* and died at Peoria in 1860, a member of Peoria Commandery.

The Chicago lodges were by no means deficient in the great Masonic virtue, charity, as the following preamble and resolution, introduced in the Grand Lodge at the session of 1853, will satisfactorily demonstrate: "Whereas: It has been represented to this Grand Lodge that the finances of LaFayette and Oriental lodges of Chicago are now almost entirely exhausted by their frequent disbursements of charity to indigent traveling brethren; therefore Resolved: That the Grand Lodge of Illinois, out of its Charity Fund donate to LaFayette Lodge, No. 18, and Oriental Lodge, No. 33, to be equally divided among them, the sum of five hundred dollars." The Grand Lodge accounts do not exhibit its payment, however.

On May 18, 1854, the corner-stone of the Masonic Temple, 83 and 85 Dearborn Street, was laid, the officers and members of the Grand Lodge meeting at the lodge room, 171 Lake Street, and thence proceeding to the location of the temple, where eloquent addresses were delivered by Drs. J. V. Z. Blaney and W. B. Herrick. The first lodge room in Chicago was at the Harmon & Loomis Building, at the southwest corner of Clark and South Water streets, third story; and subsequently the lodges met at Cobb's Building, 171 Lake Street, and over the Apollo Hall, 250 Lake Street, corner of Lake

and South Water streets.

The dedication of the temple occurred on St. John's \* Proceedings of Grand Lodge, 1840-60, page 491.

<sup>\*</sup> This gentleman is the Blue-Ribbon Lodge-treasurer, and is still the occupant of this office, having held it without lapse, except for the years 1851-52-53-54; thirty years.

Day, June 24, 1856, the fraternity assembling at Metropolitan Hall, and thence proceeding, processionally, to the Amphitheater, where the oration was delivered by S. Y. McMasters, D. D., of Alton. After the oration, the procession again got into line and marched to the temple, where the esoteric ceremonies were performed by the Grand Lodge, under the gavel of M. W. William

MASONIC TEMPLE.

B. Herrick, Grand Master, who delivered an eloquent address. About 5 P. M. the brethren and guests assembled at Dearborn Park, where a collation was laid, after the discussion of which toasts and speeches were The banquet terminated at about 8:30, the brethren and guests meeting at Metropolitan Hall in the evening and winding up the proceedings of the day by a grand ball, whereat the élite of the city were present.

GARDEN CITY LODGE, No. 141, was instituted by dispensation on November 23, 1853, and was chartered October 2, 1854, with the following charter members: William McMillen, W. M; George E. Pitkin, S. W.; L. P. Cheney, J. W.; Cheney Reed, treasurer; C. L. Watkins, secretary; C. Sassaman, S. D.; A. H. Merrill, J. D.; Carding Jackson and A. T. Dusenbury, M. M.

WAUBANSIA LODGE, No. 160 .- In the proceedings of the Grand Lodge for 1854, L. Lusk, B. B. Payne and Larkin M. Riley, the committee on Lodges Under Dispensation, report having had consideration of petition for a lodge at Chicago, to be called Waubansia, and recommend the issue of a dispensation therefor to William B. Olmsted, master; E. J. Higgins, senior warden

and William A. Wilson, junior warden. Shortly afterward, Olmsted, being unable to attend to the duties resigned, and Deputy Grand Master T. O. Wilson, appointed John H. Dart, worshipful master, in his stead. The dispensation appears to have been granted October 12, 1854, and a charter to have been issued October 3, 1855, to Waubansia, No. 160. The history of Waubansia Lodge states that J. A. Hahn, J. T. Holt, Henry Fuller, George H. Phelps, James P. Russell, Horace Foster, Samuel Ashton, Frank Parmelee, William F. Orcutt, William H. L. Wilbur, Thomas Speer, William T. Hancock, S. S. Rogers, J. S. White, James S. Beach, William S. Bond, Norman Wiard, C. P. Albee, Henry A. Dean, S. C. Lum, Josiah H. Bross, T. O. Wilson, D. S. Smith, Isaac P. Poineer and James Sinclair were also charter members; that the primary ascensions of the 3-5-7 staircase were made by J. P. Brewster, John V. Farwell, G. S. Barstow, P. A. Hoyne, J. E. Church, R. C. Garrabrant, J. L. Marsh, C. T. Bowen, H. W. Zimmerman and J. M. Witherell, and that the meetings were held in Masonic Hall, 171 Lake Street, and subse-

quently in the Temple on Dearborn Street.

GERMANIA LODGE, No. 182 .- April 16, 1855, a dispensation was granted to George B. Glaessner, Frederick C. Brandes and Rudolph Woehrly, as the three senior officers, for Germania Lodge to perform the Masonic rites and ceremonies of a Blue Lodge, and for the work to be done in the German language. At the session of the Grand Lodge, this year, the committee on Lodges Under Dispensation was divided in its opinion upon the legitimacy of a lodge working exclusively in a foreign language and, on October 2, 1855, the committee reported adversely to a continuance of the dispensation; ostensibly because the application had no avoucher endorsed of the ability of the lodge to do the work and confer the degrees. This report was accepted by the Grand Lodge, but subsequently, on the same day, a resolution was offered that a charter be granted Germania Lodge; which was adopted after the word dispensation had been inserted in lieu of charter. At the evening session, however, in consequence of the persistent efforts of Brother Hutton, the resolution was called up, reconsidered and amended so as to give a charter to Germania Lodge, No. 182, and the succeeding day she was represented in the Grand Lodge; the first German lodge in the State. The charter was granted under date of October 5, 1855, the charter members being George B. Glaessner, Frederick C. Brandes, Frederick Burky, Rudolph Woehrly and August F. Otto. The first officers of the lodge were George B. Glaessner, W. M.; Frederick C. Brandes, S. W.; Rudolph Woehrly, J. W.; George P. Hansen, treasurer; A. Boyer, secretary; F. Schoenwald, S. D.; Frederick Burky, J. D., and J. G. Higgins, tyler. Thus the claims of Chicago to recognition for polyglot Masons were conceded and validated.

WILLIAM B. WARREN LODGE, No. 209 .- On November 15, 1855, a dispensation was granted to William B. Warren Lodge, and upon the 7th day of October, 1856, a charter was issued therefor. The charter members were: William T. Raifsnider, first W. M.; A. Loyd, first S. W.; I. Kellogg, first J. W.; and A. W. Rood, John Hughes, Harvey Danks, H. F. Hurn, and N. W.

Douglass.

CLEVELAND LODGE, No. 211.—On January 16, 1856, Reuben Cleveland, Josiah H. Bross, John K. Russell, Caleb D. Fitts, Edwin A. Webber, Charles A. Case, Jacob B. Stansell, Edwin Hamilton, Wiley M. Egan, Lucian P. Cheney, Joseph P. Ross, Samuel I. Russell,

Reuben Tayler, and Albert C. Ellithorpe met at 79 Lake Street, the office of Dr. Lucian P. Cheney, to debate upon the feasibility of establishing a lodge upon the West Side. After an adjourned meeting they resolved that the name of the embryo lodge should be Cleveland, and a dispensation was applied for. Thursday, January 23, 1856, at Temperance Hall, corner of West Randolph and Clinton streets, the dispensation was read; and the officers at this first meeting of Cleveland Lodge, U. D., were: Reuben Cleveland, W. M.; Josiah H. Bross, S. W.; John K. Russell, J. W.; Caleb D. Fitts, treasurer; Edwin A. Webber, secretary; Charles A. Case, S. D.; Jacob B. Stansell, L. D. On February 14, 1856, Alvin Salisbury became the first novitiate. At the annual communication of the Grand Lodge, held in Springfield October 3, 1856, a charter was granted to Cleveland Lodge, No. 211; and on Wednesday evening, October 22, 1856, at a special communication, the lodge was constituted and the officers installed by P. G. M. William B. Herrick. These were; Reuben Cleveland, W. M.; Josiah H. Bross, S. W.; Ira Goddard, J. W.; Ira S. Chamberlain, treasurer; Edwin A. Webber, secretary: John H. Dart, S. D.; Joel M. Chamberlain, J. D.: Isaac P. Hatfield, tyler. The M. Chamberlain, J. D.; Isaac P. Hatfield, tyler. following were the charter members of this lodge: Charles A. Case, Wiley M. Egan, Albert C. Ellithorpe, Caleb D. Fitts, Edwin Hamilton, A. P. Haywood, Josiah H. Bross, Reuben Cleveland, James P. Ross, John K. Russell, Samuel I. Russell, Jacob B. Stansell, Reuben Tayler, A. A. Webber, and Edwin A. Webber.

With this closes the recital of the journeyings of the various Blue Lodge pilgrims in search of light. In 1857 the Grand Lodge had two hundred and thirtynine chartered lodges, fifty-four working under dispensation, and about ten thousand Masons who divided their time by tripartite measurement. The leaven which was hidden in a few measures of meal, and which was so strenuously antagonized, has risen and permeated

the whole mass. "So mote it be." LAFAYETTE CHAPTER, No. 2.—Cryptic Masonry was of very early establishment in Chicago, LaFayette Chapter, No. 2, having been instituted by dispensation from the M. E. Deputy Grand High Priest of the United States July 12, 1844, constituted by charter from the General Grand Chapter of the United States September, 1844, and by charter from the Grand Chapter of the State of Illinois October 14, 1850. The charter members were William F. Walker, John R. Case, Samuel H. Gilbert, Henry Brown, Matthew Taylor, Reuben Tayler, Carding Jackson, Henry W. Bigelow, Luther Marsh, A. Garrett, and John Davis. The first officers of the chapter were: Rev. William F. Walker, high priest; John R. Case, king; Samuel H. Gilbert, scribe; M. L. Knapp, captain of the host; Reuben Tayler, principal sojourner; John Davis, royal arch captain; Cornelius Lansing, G. M. 3d V.; P. P. Robinson, G. M. 2d V.; John Brinkerhoff, G. M. 1st V.; Samuel Hoard, secretary; H. W. Bigelow, treasurer; Rev. William M. D. Ryan, chaplain; Luther Marsh, William Harmon, and Isaac P. Hatfield, stewards; Isaac P. Hatfield, guard.

WASHINGTON CHAPTER, R.A.M., was first organized December 26, 1857, at a meeting where Reuben Tayler,\* Reuben Cleveland, Dr. Franklin Wilson, Wiley Michael Egan, Theodore Tuthill Gurney, George Cowper, William Train Muir, Lucian Prentiss Cheeney, Joshua Howell Gest, John Kniffin Russell, Enoch Bunker Stevens, John T. Holt and William B. Milne

were present. The name of the chapter was desided upon, application made for a dispensation, and a solutiation made to LaF ayette Chapter, No. 2, for a recommendation therefor. The following were elected as officers for the inchoate chapter: Reuben Tayler, H. P.; Reuben Cleveland, K; Franklin Wilson, S; Wiley Michael Egan, C. of the H; Theodore Tuthill Gurney, P. S.; George Cowper, R. A. C.; Lucian Prentiss Cheeney, treasurer, and Joshua Howell Gest, secretary.

CHICAGO COUNCIL.—On June 3, 1854, James H. Hibbard, Grand Puissant, granted a dispensation to Joseph Filkins, M. Brayman, J. Herman Bird, Charles R. Starkweather, C. R. Vandercook, James McNair, Isaac P. Hatfield, John R. Case, L. P. Hilliard, Reuben Tayler and Carlton Drake to form a council of Royal and Select Masters under the name of Chicago Council No. -. The Grand Council, however, of which J. H. Hibbard was the senior officer, was found to be illegal, as upon September 29, 1853, the date of its constituting, Springfield Council-one of the three constituent councils-had no charter. Upon March 10, 1854, a new Grand Council was organized, and at its annual convocation on September 27, 1854, a letter was received from J. V. Z. Blaney, T. I. G. M. of Chicago Council, stating that no work had been done under the old dispensation and asking that a new one might be issued. Authority to this effect was granted, the officers being J. V. Z. Blaney, T. I. G. M.; Carlton Drake, D. I. G. M.; L. P. Hilliard, P. C. W.; and the council having fourteen members. This second dispensation was either never issued or lost in transit to Chicago Council, as J. H. Hibbard received a communication from J. V. Z. Blaney in January, 1855, stating that the dispensation had not been received, and accordingly one was made out and sent to the council that was suffering for credentials. They were received by Chicago Council, and on March 8, 1855, the council regularly and legally convened, the following being the officers: James V. Z. Blaney, T. I. G. M.; L. P. Hilliard, D. I. G. M.; Carlton Drake, P. C. W.; J. H. Bird, C. G. pro tem. Companions Ring, Shirley, McNair, Starkweather and Filkins; and visiting Companions, B. Sondheim and Levi Leibalt were present. E. J. Higgins, George W. Deering, W. C. Hunt and A. Liebenstein received degrees. The charter was issued September 26, 1855, and the following were the first officers under the charter: Companions James V. Z. Blanev, T. I. G. M.; Carlton Drake, D. I. G. M.; L. P. Hilliard, P. C. W.; Thomas Shirley, C. G.; J. H. Bird, recorder; C. R. Vandercook, steward, and E. J. Higgins, sentinel.\*

APOLLO COMMANDERY, No. 1, Knights Templar, was granted a dispensation by the General Grand Encampment of the United States, on May 15, 1845. Upon September 17, 1847, anno ordinis, 729; the same august Masonic body confirmed the dispensation and granted a perpetual charter. The first conclave held by Apollo Encampment was at the Masonic Hall, in the forenoon of May 20, 1845, with William Frederick Walker, E. C.; John Roman Case, G.; and William Stuart, C. G.; and at this conclave petitions were presented from Jacob Beeson, of Niles, and C. Britain, of St. Joseph, Mich.; and from W. A. Rowlett, W. S. Brown, Philip P. Robinson, Charles Follansbe and Charles Robert Starkweather, of Chicago. It was agreed that the petitions should be referred to a committee, who should report immediately. Their report was favorable, and the ballot being clear,

<sup>\*</sup> Reuben Tayler is one of the oldest living Masons, having been made April 18, 1820, his twenty-second birthday occuring May 3, 1820.

<sup>\*</sup> To John Oscar Dickenson, Recorder of Chinago Council, No. 4, the collaborator is indebted for aid in compiling this history.

the applicants were declared elected, were introduced and created Rosicrucians. Sir Knight W. E. Russel, was the first affiliate, his petition being presented at the second conclave of the encampment, on May 23, 1845; when W. S. Brown, W. A. Rowlett and P. P. Robinson, were created Knights of Malta and Knights Templar. The charter members of Apollo Encampment were Henry Brown, John Barney, G. C. Blodget, John Roman Case, Samuel H. Gilbert, Isaac Haight, A. B. Lewis, William Moreland Davis Ryan, William Stuart and William Frederick Walker. The commanders of the encampment have been William Frederick Walker, 1845; John Roman Case, 1845–52; Reuben Tayler, 1853; James Van Zandt Blaney, 1854; John Herman Bird, 1855; Thomas Shirley, 1856, and Hosmer Allen Johnson, 1857; in which last year the designation Encampment appears to have been changed to Commandery \*

Three commanderies having been instituted in the State, preliminaries were perfected for the formation of a Grand Commandery; and, upon October 27, 1857, a convocation was had at the Masonic Temple, Chicago, whereat Apollo, No. 1, Belvidere, No. 2, and Peoria, No. 3, were represented, and where a warrant, dated September 15, 1857, was received from the Grand Encampment of the United States, authorizing the organization of a Grand Commandery of Knights Templar, for the State of Illinois. Pursuant thereto the following Knights Templar were elected officers of the Grand Commandery: James Van Zandt Blaney, G. C.; Clark Brown Stebbins, D. G. C.; Benjamin F. Barry, G. G.; Hosmer Allen Johnson, G. C. G.; Reuben Tayler, G. P.; Robert Harris Foss, G. T.; William Harbron Turner, G. R.; Henry L. Gaines, G. S. W.; DeWitt Clinton Martin, G. J. W.; Josiah Hunt, G. St. B.; Isaac Underhill, G. S. B.; Charles Robert Starkweather, G. W., and

Ezra James Higgins, G. C. G.

Relative to the Ancient and Accepted Scottish Rite, G. W. Barnard states, that during the proceedings on the first and second days of May, 1846, Most Puissant Sovereign Grand Commander John James Joseph Gourgas, 33°, was authorized to issue to Brothers W. F Walker, William Stuart, Charles R. Starkweather, John R. Case, William L. Brown and Samuel Hoard, all of the city of Chicago, a charter for an Ineffable Lodge of Perfection, but that his closest search has not revealed the issuance of any such charter. But in July, 1856, Killian Henry Van Rensselaer visited Chicago and, assisted by Charles Robert Starkweather, initiated, elevated and proclaimed the requisite number of worthy brethren to be S. P. R. S. 32°; and fully organized and constituted them in lodge, council, chapter and consistory, and on the 20th day of Ijar, A. M., 5617,—May 14, 1857,—charters were issued to these organizations, under the name of Occidental Sovereign Consistory of Sublime Princes of the Royal Secret; Gourgas Chapter of Rose Croix; Illinois Grand Council Princes of Jerusalem, and Van Rensselaer Grand Lodge of Perfection; the charter members being, in each case, Charles R. Starkweather, James V. Z. Blaney, George W. Deering, James L. Dalliba, William B. Herrick, Robert H. Foss, William W. Mitchell and Hosmer A.

Thus, in 1857, all the various Masonic confraternities were constituted and in a flourishing condition. But one item of general interest has been undiscoverable, the first brother who was buried with Masonic honors. Old residents state, that prior to the establishment of a

lodge in Chicago, some one who died at the fort was buried by such Masons as were in the town of Chicago, with Masonic honors; but the most careful research has failed to verify this assertion by documentary evidence, Masonry, at the close of 1857, was a vital, augmenting

Anti-Masonic.—In April, 1846, was organized the Illinois State Anti-Masonic Society, of which James H. Collins was president; Joshua Bell and James H. Rickey, vice-presidents; Joseph Peacock, recording secretary; George W. Gardiner, corresponding secretary, and A. Rossiter, treasurer. The recital of the progress of Masonry from 1844 until 1857 demonstrates that the anti-masonic antagonism was no great obstacle to the advancement of the Order.

## ODD FELLOWSHIP.

The first lodge of Odd Fellows organized in the State of Illinos was Western Star Lodge, No. 1, at Alton. In 1835 Samuel L. Miller, a past-grand of a lodge in Maryland, came West and brought with him a warrant from the Grand Sire, for the institution of an I.O.O. F. lodge at St. Louis, at or near which city it was his intention to reside. Under this warrant he instituted Traveler's Rest Lodge, No. 1, at that place, in the jurisdiction of Missouri, and the following year, August 11, he aided in the institution of the first lodge in Illinois, namely, Western Star Lodge, No. 1, at Alton. The charter members were Samuel L. Miller, John R. Woods, Stephen Lansing, Thomas Wright and John Fisher. Samuel L. Miller, the founder of the two first lodges in Illinois and Missouri, became the first Grand Secretary of Illinois, and was for some years prominently identified with the Order in this State.

UNION LODGE No. 9.-From 1836 to 1844 the Order evidently grew but slowly, for on the 28th of February of the latter year the first lodge was instituted in Chicago, under the name of Union Lodge, No 9;\* so that in eight years from the time of its introduction into the State, nine lodges constituted the strength of the Order all told. This lodge was established on a petition to the Grand Lodge, from Past Grand A. L. Jacobus, B. W Thomas, Edward Burling, Francis Marshall and others, early in January, and on Wednesday night, February 28, 1844, the Grand Master of the Grand Lodge, Thomas J. Burns, being present, the first meeting was held in a building which then stood on the corner of Randolph Street and Fifth Avenue. The charter members were B. W. Thomas, E. Burling, Charles Wheelock, Francis Marshall, Augustus L. Jacobus, Daniel Heald, Jr., William Anderson, J. M. Morton, C. P. Kellogg and J. Burrows. Its first officers were A. L. Jacobus, N. G.; F. McFall, V. G.; B. W. Thomas, secretary, and Daniel Heald, treasurer. Among its early initiatory members were Samuel B. Walker, now living in retirement on the West Side, E. W. Densoms, E. A. Rucker, H. L. Rucker, W. W. Danenhower, H. O. Stone, Robert H. Foss, A. G. Burley, and many others whose names it has been impossible to obtain. There were thirty-nine members by August 14. Isaac N. Arnold joined in 1846. After it was fairly started and in good working order, the lodge moved its place of meeting to a hall on the corner of Lake and State streets, where it remained until the erection of Odd Fellows Hall, at Nos. 98 and 100 Randolph Street, when it removed to that place. From the first, Union

<sup>\*</sup> H. S. Tiffany of Apollo Commandery, and the Blue Book of that organization, have furnished valuable data that is presented in this summary.

Prior to the institution of Union, No. 0, the eight lodges in the State were located as follows: Nos. 1 and 2 at Alton; No. 3 at Greenville; No. 4 at Jacksonville; No. 5 at Galena; No. 6 at Springfield, and Nos. 7 and 8 at Belleville.

Lodge prospered finely, and its membership increased so rapidly that in a little over a year, using the language of a veteran Odd Fellow, "The boys swarmed and a new lodge was started." This was

DUANE LODGE, No. 11, was instituted March 5, 1845. Its place of meeting was in the fourth story of the Loomis Building, corner of Clark and South Water streets. Of course the charter members of Duane were all members of Union; but, feeling that a new lodge was needed, they had acted as they thought wisely in thus establishing it. Their names were: Francis McFall, Robert P. Hamilton, Allen S. Robison, Thomas George, Lewis H. Todd, Augustin D. Boyce, Perley D. Cummings, and William Anderson. The new members fitted their lodge-room up in excellent style, and it was generally conceded to be the finest and best appointed hall then existing in the West. Owing to this fact and the pride its members took in their organization, Duane soon came to be known as the "Silk Stocking Lodge," a title which clung to it for many years. With the starting of Duane Lodge, the Order continued to grow in Chicago, but nearly two years elapsed before the third lodge was established.

EXCELSIOR LODGE, No. 22. This was instituted January 6, 1847. The formation of this lodge was the result of a second "swarming" from the mother hive. Its charter members were James K. Webster, S. W. Grannis, James W. Grauks, Horace Lamb, J. DeLa-Croix Davis, Herman H. Benson, Elisha Lane, F. Campbell, Abel H. Daufer, William E. Knibloe, Thomas Manahan, William Henry, George W. Carley, and L. Daufer. Excelsior Lodge held its meetings in the hall of Duane Lodge until the building of the hall on Randolph Street when it also moved to that place. Concerning the formation of this lodge, an interesting bit of history is found in the report of Grand Master S. S. Jones to the Grand Lodge, in its session held at Springfield, in January, 1847. He says:

"Since the November session of this body, a petition has been received from fourteen highly worthy brethren of Chicago, asking for a charter for a new lodge at that place, to be known and hailed as Excelsior, No. 22. The prayer was granted, and on the 6th of of January, I, in company with other Odd Fellows, from sister lodges, repaired to Chicago, and there instituted Excelsior Lodge, No. 22, and installed their officers under the most flattering The petitioners for the charter were all worthy circumstances. gentlemen and well worthy to receive it, and we may look forward with the brightest anticipations, for a high state of prosperity in They will do honor to the title and name they have that lodge. They will do honor to the title and name they have assumed. Continuing his report, the Grand Master ads, "We, on Tuesday evening, visited Duane Lodge. No. 11, and there installed the officers for the current term. The petitioners for Excelled the officers for the current term. sior Lodge were principally an accession from Duane, which lodge they left with the best of feeling; as I am informed they presented the out-going members with the amount of their initiation fee for the purpose of aiding them to commence the work under the Excelsior Lodge was instituted in the Duane lodge-room, where their meetings are to be permanently held. In a word, I may say, the Order in Chicago is in a highly flourishing condition."

It was in December of that year that the Order was called on to perform the last solemn rites at the burial of a brother. The Daily Journal of December 13, 1847, thus refers to it:

"On yesterday the different lodges of I.O.O.F. assembled at the Methodist church to pay the last tribute to a departed brother, A. P. Spencer, who died on Saturday (December 11). Rev. Mr. Hibbard, of the New Jerusalem faith, though not a member of the Order, officiated by request of the deceased. Mr. Spencer was a printer and formerly a workman in this office. large number of the craft was in attendance and followed his remains to the grave. This is the first instance where the brethren of the mystic tie have been called upon to perform the solemn rites of their Order.

CHICAGO LODGE, No. 55, the third in point of

seniority, was organized in July, 1849, and held its meetings on each Monday evening in the hall of Union Lodge, which was still situated on the corner of Lake and State streets. In the two years which had elapsed since the institution of Excelsior, the Order had continued its rapid growth in strength and numbers, until the institution of Chicago Lodge was a necessity occasioned by the number of applications for membership in the existing lodges. On its charter can be found the names of many who are still its members. The following is the list: Edward Burling, William Anderson, Benjamin G. Johnson, Patrick O'Donaghue, Robert H. Foss, Isaac Špear, Timothy H. Ladd, Isaac Coburn, Charles M. Gray, George M. Gray, B. C. Welch, H. H. Husted, Ambrose Burnam, James Launder, David S. Smith, William Dickens, John P. Foss, Samuel T. Foss, William P. Roche, John M. Merserve, Moses Kohn, Joseph Harrison, John J. Brown, Simon V. Kline, and Jacob V. A. Wemple. A glance at the number of the lodges as they were organized in this city, and an observation also of the time elapsing from the institution of Union Lodge, No. 9, in 1844, to the establishment of Chicago Lodge, No. 55, in 1849, will give the reader some idea of the growth of the Order in the State, and its comparative advancement in this city. For instance, there were eight lodges in the State when Union Lodge was organized; five years later, when Chicago had four lodges, there were fifty-five, so that it is apparent that the growth of the Order here was more rapid than in any other portion of the State.

ROBERT BLUM LODGE, No. 58, was organized in October, 1849, and was the first German society of the Order. Its meetings were held in the hall of Union Lodge. It was from the beginning a prosperous body. Its charter members were: Peter Schmitz, Philip Freedrich, John Fischer, Frederick Singer, George Funk, C. Frederick Schott, Joseph Schlereth, Gottfried Laughein-

rich, V. A. Boyer and John M. Pahlman.

The following year, at the session of the Grand Lodge, held at Peoria in July, the Grand Master reported the fact that permission had been granted Robert Blum Lodge to work in the German language. Commenting on this action, and referring to the policy of permitting lodges in this country to work in a foreign tongue, the Grand Master remarked:

"As it is the established policy of the Order to allow lodges to work in other languages than the English, I requested the secretary to send for six copies of the books in the German languages, as more would probably be needed. I am happy to say that I have none but good accounts of the working of this lodge. Since this occurred I have doubted whether it was the true policy to have lodges working in foreign languages—whether our duty to our country does not require us to use all our influence to Americanize all foreigners among us as soon as possible, and afford them no facilities for their being satisfied or comfortable without conforming to the genius, institutions and language of the land."

The Grand Master's suggestions, it appears, have never been carried out by the Order, for all over the land are lodges working in foreign tongues, whose power for good is unquestioned and whose members are in

every sense true Odd Fellows.

In July, 1850, a Degree Lodge was organized, which met on the second and fourth Fridays of each month for work in the degrees, in Odd Fellows Hall on Randolph Street. Previous to this two encampments had been formed, but as they will be treated separately later on, no further mention is necessary here. But, pursuing the history of the lodges, it is found that a period of seven years elapsed before the formation of a new lodge marked the growth of the Order here, and that one was established on the West Side.

FORT DEARBORN LODGE, No. 214, the last referred to, dates from October 4, 1856. Dr. Samuel Willard, of this city, who for many years has been a prominent Odd Fellow in this State, and who has represented the Grand Lodge in the councils of the Sovereign Grand Lodge of the United States, has written an interesting history of Fort Dearborn Lodge, of which he has for years been a member. Concerning the formation of the lodge he savs:

"There were then in this city but five lodges, Union, Duane, Excelsior, Chicago and Robert Blum; and the last of these lacked but a week of being seven years old. The city had grown greatly; these lodges bad increased in membership, and now two more lodges were to be formed to work on the west side of the river, Fort Dearborn, No. 211, to work in English, and Harmonia, No. 221, about four months younger, to work in German. \* \* \* \* \* Curiously, Fort Dearborn Lodge is closely associated with my own memory and work in the Order; for this was the last lodge instituted before I became Grand Secretary, and the first representative to the Grand Lodge from this body, assisted in choosing me to that office within two weeks after this lodge was opened, and transacted business with me at the session of 1856." \* \* "On the night of the institution the Grand Master, Perry A. Armstrong, met the charter members of Fort Dearborn Lodge in the hall of Excelcior, with members of other lodges to aid. Brother George F. Crocker, of No. 22, an active Odd Fellow, long since dead. acted as D. G. M.; our long time-friend, Albert G. Lull, now P. G. Rep., was grand marshal; James F. Jillson, grand secretary and Andrew Tauber, of No. 58, deceased, was grand treasurer. The charter members were Allen C. Lewis, F. H. Sleeper, Thomas Manahan, E. B. Kingsley, J. K. Thompson, Reuben Cleveland, N. W. Condit, Pleasant Amick, J. P. Cook, A. G. Warner, George W. Noble and P. B. Lamb. The records of the first month do not show the places of meeting after the institution; but the lodge seems to have gone at once upon the West Side, to a hall held by Cleveland Lodge of Masons, on the southeast corner of Clinton and Randolph streets."

The seal adopted by the lodge and still in use, bears as a device a representation of old Fort Dearborn. The first term closed auspiciously, having in the first fourteen weeks of its existence taken in thirty new members and a revenue of \$122.50. The lodge was now firmly established and from this time on its history would probably be of but little interest to the general reader, and the limits of this work preclude its further consideration; suffice it to say that Fort Dearborn Lodge passed through various vicissitudes, alternate periods of prosperity and adversity, survived all, and is to-day one of the strong working lodges in the city.

to-day one of the strong working lodges in the city.

HARMONIA LODGE, NO. 221, was instituted in January, 1857, by German residents of the West Side. Its charter members were John C. Smith, John A. Boerner, Louis Hientz, George Petermann, John Hoffman, Charles Ippel, Charles Rietz, Conrad Schertel, F. W. Forch, and August Schenkoweitz. The lodge is still recognized as one of the foremost German lodges in the

city.

ODD FELLOWS HALL.—In the foregoing history of the different lodges in this city, frequent references have been made to Odd Fellows Hall, which was situated on Randolph Street, near Clark. As it is peculiarly an institution of the Order, a brief history is not inappropriate here. This hall was built by Union, Duane and Excelsior lodges, and on the 21st of February, 1853, was thrown open to the public for inspection. It was elegantly furnished and was pronounced then the finest hall in the city. The following evening it was dedicated to the uses of the Order, with appropriate public ceremonies; Hon. Schuyler Colfax was the orator of the occasion.

At this meeting the degree of Rebekah was conferred upon some thirty or forty ladies, wives and daughters of the members of the different lodges.

ILLINOIS ENCAMPMENT, No. 3, was the first of that

degree established in Chicago, and the third camp instituted in the State. The first one was Wildey, No. 1, at Alton; the next, No. 2, known as Lebanon Encampment, at Springfield; the third as above, which dates from February, 1845. Its charter members were R. W. Thomas, Arthur Johnston, A. D. Boyce, Sylvester Marsh, N. Sherman, Jr., P. D. Cumings and S. N. Davis. The application for the charter for this Encampment was made in December, 1844, and on the 24th of that month Grand Master William Duane Wilson, of Michigan, secured the warrant to confer degrees and to open Illinois Encampment, No. 3. In accordance with this commission Grand Master Wilson, assisted by Charles T. Adams, Past Senior Warden of Michigan Encampment, No. 1, came to this city and conferred the Encampment degrees upon the petitioners, whose names have already been given, and duly instituted the body on the night of February 7, 1845. The ceremonies took place in the hall of Union Lodge, No. 9, and the following officers were installed: N. Sherman, Jr., C. P.; P. D. Cumings, H. P.; R. W. Thomas, S. W.; A. D. Boyce, S.; S. N. Davis, T.; Sylvester Marsh, J. W., and Anthony Johnston, S. The Encampment did not, it appears, thrive as vigorously as its friends had hoped; for three years later, March 20, 1848, for some reason, the members surrendered their charter and it ceased to exist. No doubt the mistake was made of planting the Encampment too early in a comparatively new field, as the Order itself had only been introduced here in the preceding year. Living but so short a time and dying as it did before the institution of the Grand Encampment in the State, facts concerning its history have been obtained only with great difficulty. A careful search of records here and the records of the Grand Lodge and Grand Encampment of the State disclose no facts worthy of note. And it was only from T. A. Ross, Grand Secretary of the Sovereign Grand Lodge of the United States, that the date of its organization and the names of its charter members were obtained. But notwithstanding the failure to continue the existence of Illinois Encampment, No. 3, it seems that the Odd Fellows were determined to try again; for in August, 1848, the records of the Grand Lodge of the United States show that a charter had been issued for the institution of

CHICAGO ENCAMPMENT, No. 10, and on the night of September 21, 1848, in the hall of Duane Lodge, No. 11, Patriarch A. L. Jacobus, by the authority vested in him by the Grand Sire, instituted the new encampment. The charter members were F. Scammon, T. H. Ladd, E. A. Rucker, Charles Cumberland, S. N. Davis, N. Sherman, Jr., W. H. Minard, George G. Andrews and Peter A. Lantz. In addition, the following Odd Fel-lows were initiated: C. G. Drake, T. L. Perdue, John Gray, Henry L. Rucker, Moses Kohn, Charles M. Gray, Samuel Rattle, Patrick A. Donahue, Truman Whitcomb and W. A. Eliason. Its first officers were F. Scammon, C. P.; R. H. Foss, H. P.; T. H. Ladd, S. W.; N. Sherman, J. W.; S. B. Walker, T., and E. A. Rucker, S. The new Encampment being started under more favorable auspices than the old one, soon attained a permanent footing, and is to-day a prosperous and active organzation. In concluding this brief chapter, it should be stated that the records of Chicago Encampment were all destroyed in the great fire, and that, previous to this, the records of the Grand Encampment had also suffered a similar fate. Owing to these losses, it has been found a matter of much delay and difficulty to obtain the few facts here given concerning this Encampment. Indeed, it is due to the thoughtful foresight of A. T. Sherman, an old and honored member of the Encampment, who took the pains, immediately after the fire, to collect by interviews and from all obtainable records, information concerning its institution and early history, that the

information herein given has been obtained.

It is to be regretted that a more detailed history of the Order, in this city, cannot be presented, but it is believed enough has been written to include, in a general way, the really important facts concerning its institution and subsequent growth; while a history of its workings, in which would be included a discussion of the power and influences of the Order as a social factor, does not properly belong to a work of this character. Of the lodges mentioned, which embrace those established here during the period included in the present book, all are to-day in a satisfactory condition, and from them have gone out scores of sister lodges whose history will receive appropriate treatment in the pages of another volume.

## SOCIAL AND TEMPERANCE REFORMS.

In the primitive state of society; in the embryonic stage of association of pioneer settlement, one of the first wants felt by the individual is that of frequent communion with his fellow-creatures-hence, in very immature settlements are seen the "stag-dance" and "hoe-down;" in those a little more advanced, the Waba-no. Consequent upon the assembling of the individuals of any sparsely settled region must result a discussion of the means whereby their opportunities for social and intellectual culture may be increased; and then, how those vices which militate against the welfare of the little commonalty may be abrogated or destroyed. It goes without saying, that of the latter class, intoxication is the most potent source of evil; and to those who nullified its possibility of harmful influences in Chicago, Captain Heald takes precedence, by the destruction of the liquor in Fort Dearborn, prior to its evacuation in 1812. This, however, was but a piece of quasiphilanthropy; the destruction was only accomplished to preclude the augmentation of rancor and ferocity in the Indian heart. The evils that might arise from its consumption by the soldiers were undeserving of the exercise of the stratocratic prerogative. But in 1832, Philo Carpenter inaugurated a temperance society in the little coterie of settlers. How largely it was attended, or how many were permanently influenced by its precepts, are unknown facts. No effort, however, but attains some result. Meanwhile the settlers met at their balls and parties, formed reading-circles and debating clubs, and by the ennobling influence of the society of good women, prevented the too great spread of lax habits that are so prevalent in frontier settlements where the majority of the settlers are masculine, and Indians in an uncivilized state as to good habits, but in a highly civilized condition as to bad ones, frequent the settlement. There were likewise meetings held by various apostles of various denominations, but exactly the power that a church has in social reformation in a new settlement, it is hard to designate; as a church per se is established by the devotees of that creed, and their presence in the community has made itself felt long before it assumes form as a congregation. Association with the ladies of early Chicago softened the rugged voyageur, ennobled the ferocious half-breed, stifled the half uttered expletive upon the lips of the careless hunter, and made the resident more careful as to his dress, demeanor and habits; but this casual association was insufficient to check the fatal evil, intemperance. The first organized secret society that attempted to

thwart the saloon interest was the Independent Order of Rechabites, organized August 20, 1844. It did excellent and efficient work, in alluring the young men from intemperance. This may be esteemed the fruitage of Philo Carpenter's temperance society, and many other societies that succeeded it. Temperance societies divested of the halo of initiations and degrees are not eminently successful in restraining mature persons. Swaddling clothes of blue and red ribbons do not prevent the illicit potation; but the responsibility to a society that the infringement of the obligation, of which the cordon is an emblem, is a serious deterrent and preventive. The rock upon which temperance reform was built may then be said to be the Rechabite Lodge of 1844. This statement, however, to be literally accurate, should be qualified by stating that the temperance reform of the hereafter was erected upon a basis of 1844, for no tidal wave of prohibitory amendment, or restrictive legislation swept over Chicago anterior to 1857. The temperance reforms of those early days were individual and not general, persuasive in lieu of coercive, appealing instead of mandatory, and possibly none the less effectual because of these characteristics; that the co-operative efforts that were exerted were successful is proven by history; for, despite the large element that speculation introduced of lawless, careless characters, drunkenness was not a widely spread vice.

The results that were produced by the efforts of individuals to cultivate their moral and intellectual forces are seen in the Young Men's Association of 1841, and the Mechanic's Institute of February 23, 1842. The amelioration of the dearth of intellectual food produced by the establishment of these Lycea can not be over-estimated, and their moral effect was extremely beneficial in the providing of pure, healthy subjects of thought. Herein lies the secret of moral warfare; fill the mind of youth with good, pure thoughts and resolves and he will be moral; let him be contaminated by impure association and the result is nearly certain. Repression will not reform him any more than the argumentum ad aquam, used by the fire companies of early Chicago upon the demi-monde, extirpated the social evil. It only caused its abiding place to be more carefully hidden, to avoid similar unpleasant results. These two vices, immorality and intemperance, have kept pace with the growth of the city, but the ratio of increase was impeded by the social and temperance reforms of these times; their particularization is summarized about as follows: Social etiquette and the conventionalities of polite intercourse were ingrafted by travelers from the outside world and acquired by those who had means and opportunities for travel, and from them the "home-keeping youth" procured his example; but the amenities and purities of home-life, the effort at the cure of intemperance, proceeded from the rectitude of the Chicagoans themselves and to their personal efforts. To their irrepressible desire to do right themselves and have their neighbor do so likewise, may be ascribed the results that made the Chicago of 1857notwithstanding its being the Mecca of the speculator and adventurer-the law-abiding and orderly city that it was.

The various temperance societies that prevailed in Chicago may be summarized as follows:

The Chicago Temperance Society was organized some time in 1832, and was requested to convene at Baptist meeting-room, December 26, 1833, by J. Watkins, secretary; and on January 30, 1834, elected John Taylor Temple, president; Josiah C. Goodhue, vice-president; Philo Carpenter, secretary and treasurer;

Captain DeLafavette Wilcox, U. S. A.; M. D. Harmon; H. Van Der Bogart and Lieutenant J L. Thompson,

U. S. A., executive committee.

The Washington Temperance Society, instituted January 1, 1840, had an alleged membership of eleven hundred in 1843, and of fifteen hundred in 1845. The earliest list of officers attainable is that of 1843, and comprises: L. C. Kercheval, president; T. W. Smith, first vice-president; John Davis, second vice-president; Luther Nichols, third vice-president; H. L. Rucker, recording secretary; John L. Smith, assistant secretary; James Curtiss, corresponding secretary; James L. Howe, treasurer: B. W. Raymond and William Harman, managers.

The Bethel, or Mariners' Temperance Society, instituted July 10, 1842, had an accredited membership in 1843 of two hundred and seventy-one, and of one thousand in 1845; officers: G. A. Robb, president; Grant Goodrich, vice-president; Captain Henry Cortney, secretary; Captain G. Peterson, A. B. Gould, D. McIntosh, floating committee; Samuel Gerome, J. Prenderville,\* T. F. Hunter, H. Smith and J. Lawson,

vigilance committee.

Junior Washington Temperance Society, organized March 11, 1843, with one hundred and eighteen members, and had some three hundred members in 1845. The first officers were: Edward A. Rucker, president; Edward Morey, first vice president; Alfred Scranton, second vice-president; William Wayman, third vicepresident; David D. Griswold, recording secretary; James A. Martling, assistant secretary; Asa Covey, corresponding secretary; William H. Scoville, treasurer; Reuben B. Heacock and Richard H. Morey, managers.

Independent Order of Rechabites, Chicago Tent, No. 65, organized August 20, 1844, with one hundred and ten members, and the following officers: J. A. Hoisington, S.; G. C. Thompson, C. R.; William Gamble, D. R.; William Harman, P. C. R.; H. B. Bay, treasurer; F. L. Kent, secretary; J. B. Nickerson, C. R. R. H. S.; J. P. Thompson, levite; O. S. Hough and J. A. M. Hoisington, stewards; John Guthrie, I. G.; H. Norris, O. G.

Independent Order of Rechabites, Western Star

Tent, No. 125.

Independent Sons of Temperance, first organized November 8, 1845, with ten members, as Illinois Division, No. 1, S. O. T., and first convened in the Rechabite Hall. The following divisions were subsequently organized: Prairie, No. 8,‡ on February 13, 1847; Mariners, No. 42,† on January 1, 1848; Mechanics', No. 44,§ on April 12, 1848; Germania, No. 107, on June 13, 1848; Cadets of Temperance, Garden City Section, organized September 6, 1848. These numerous lodges appear to have diminished, as in the directory of 1855-56, but Chicago Division, No 1, and Garden City Division, No. 422, are cited as being in existence.

In May, 1849, the Chicago Temperance Savings' Association was organized. The officers were: William H. Brown, president; C. Walker, vice-president; J. Wilcox, secretary; T. B. Carter, treasurer; Alfred Cowles, attorney; Loaning Committee: B. W. Raymond, Thomas Richmond and H. Smith. Trustees: W. H. Brown, C. Walker, B. W. Raymond, A. Cowles, H. Smith, T. B. Carter, Jairus Wilcox, S. D. Childs, S. L. Brown, B. W. Thomas, Samuel Hoard, L. A.

Brown, Thomas Richmond, Jeduthan Brown, H. M.

The Independent Order of Good Templars instituted a Grand Lodge on April 18, 1855, of which Orlo W. Strong was G. W. C. T. The subordinate lodges were: Star of Hope, No. 15, instituted December 27, 1854, met at Templars' Hall, corner of Wells and South Water streets; Houston, No. 32, instituted April 2, 1855; met corner of Randolph and Clinton streets; Arethusa, No. 48, instituted July 6, 1855; met at Odd Fellows Hall, Metropolitan Block.

Star of Hope Lodge is still in existence, being the oldest lodge in the Order, and has amongst its members two of the charter members-J. S. McIntire and James Welch. It celebrated its twenty-ninth anniversary De-

cember 27, 1883.

The Temple of Honor is stated to have been instituted in Chicago in the winter of 1845, but the first account of any organization gives the date August 20, 1849. The various Temples were Radiant, No. 9; Metropolitan, No. 35; Chicago Degree, No. 7, and Chicago Social Degree, No. 18.

On February 11, 1851, a meeting was held by Scotch residents in the basement of the First Presbyterian church to form a Scotch Temperance Society. S. Lind was in the chair, and J. F. Ballantyne was secretary, and at the meeting about seventy signed the pledge to restrain from usquebaugh and kindred drinks. A committee of Alexander Brand, S. Lind, Hugh Dunlop, W. J. Patterson, Joseph Johnston, Thomas Scott, John Shanks and J. F. Ballantyne, were appointed to draft resolutions, etc., which were adopted at a subsequent meeting.

## MECHANICS' INSTITUTE.

On the night of January 3, 1837, a number of Chicago mechanics met at the Eagle Coffee House, for the purpose of organizing a Mechanics' Institute. Samuel Southerdon was called to the chair and Francis Kessler was chosen secretary. The following committee was appointed to draft a constitution: John Mitchell, Francis Kessler, William Duncan, I. L. Kimberly, Isaac N. Arnold, David Foot, P. Ballingall, I. N. Balestier, Samuel Southerdon, Dr. Murphy, Henry Baldwin, John Black, E. E. Hunter, C. A. Lobei and P. Nichols. At a subsequent meeting, held January 21, a constitution was adopted, officers elected and arrangements made for starting a library and museum. Five years later a re-organization was effected and early in 1843 it was chartered as a corporation. Its incorporators were Charles M. Gray, A. S. Sherman, Elijah Smith and Ira Miltimore. Its first officers were Ira Miltimore, presi-

Ina Multimore

dent; J. M. Adsit, first vice-president; G. F. Foster, second vice-president; J. B. Weir, recording secretary; John Gage, corresponding secretary; J. H. Hodson, treasurer; Horatio Cook, librarian; C. M. Gray, assistant librarian; I. L. Milliken, Isaac Speer, E. D. Bates, B. Bailey and E. Smith, directors. At the time of the organization, and for several years thereafter, its meetings were held in the hall of the old Saloon Building, corner Lake and Clark streets.

The objects of the society as set forth in its constitution were "to diffuse knowledge and information

<sup>John Prindiville.

† The two Rechabite lodges met at 92 Lake Street.

† These Rechabite lodges and Illinois, No. 1, subsequently met in the top story of a pack building commend Caire and South Water streets.

† Convened in Yate's Luiding, corner of Kandolph and Canal streets.</sup> 

throughout the mechanical classes; to found lectures on natural, mechanical, and chemical philosophy and other scientific subjects; to create a library and museum for the benefit of mechanics and others; and to establish schools for the benefit of their youth, and to establish annual fairs." The constitution further provided that the institution might consist of an unlimited number of members, divided into three classes, regular or life members, honorary, and corresponding members. The only requisite for membership was good moral character in the applicant, who was to be proposed by one or more members of the Institute, and who was required to receive a majority of the votes cast relative to admission, and to pay the initiative fee demanded under its by-laws. The officers were chosen annually and regular meetings were held on the first Tuesday evening of each month. Recognizing early the importance of obtaining a library, the leading members of the Institute set vigorously to work to accomplish this much desired end. Indeed, so enthusiastic were they on this subject, that it was unanimously voted to make no attempt to hold a mechanical fair until at least the foundation was laid for the establishment of such a library as the Institute desired. With the incorporation of the Institute, the Prarie Farmer, then the best agricultural monthly in the West, was made its official organ, and the mechanical department of the paper was edited by John Gage, a prominent and active member, who was as thorough and able an editor as he was a skilled and practical mechanic. Especially did he bend his energies to the acquirement of the library; not an issue of the Prairie Farmer in which he did not discuss its importance and urge the members of the Institute to united and vigorous measures for its speedy accomplishment. In accordance with his suggestions, the Institute, on the 22d of March, adopted a proposition to raise subscriptions for this purpose, to be paid in July following. This meeting, though not largely attended, was a very enthusiastic one, and \$128 were subscribed and paid on the spot. Mr. Gage published this in the Prairie Farmer and said that if each of the one hundred and fifty members would subscribe five dollars each, the net sum thus obtained would furnish money sufficient to purchase books enough to form quite a respectable library. Isaac Speer, J. B. Weir, G. F. Foster, C. M. Gray, A. F. Bradley and John Gage were appointed a committee to solicit subscriptions. They went to work with a will, and with such success that by December, six hundred and twenty new volumes were purchased and placed in the library-room, swelling the number of books thus acquired in the first year to nearly one thousand standard works. About this time arrangements were made by which lectures were delivered before the Institute, by local as well as traveling lecturers. Speaking of this subject, the Prairie Farmer says: "Whenever a traveling lecturer comes along, if he be an able one and promises an interesting course, an arrangement is made by which he is furnished with their room, lights, etc., and the members of the Institute admitted free, other citizens paying what the lecturer may demand." At the close of the year 1843, President Miltimore, on yielding up his office to his newly elected successor, delivered an address in which he briefly reviewed the history of the Institute, and congratulated the members on the uninterrupted prosperity which had attended the first year of its corporate existence. At the election of officers for the year 1844, the following gentlemen were selected: G. F. Foster, president; William H. Kennicott, first vice-president; Azel Peck, second vice-president;

Isaac Speer, corresponding secretary; Elijah Smith, treasurer; G. M. Gray, librarian; I. L. Milliken, William Blair, H. Barney, S. S. Foster, A. F. Bradley, and J. E. Brown, directors. The Institute was now fairly on the way to success and had already established its claims on the public as an institution meriting its hearty support. In the following year 1845 the first annual fair under its auspices was held, and was a success beyond the hopes of the most sanguine of its projectors. No records are at hand to give any details of the exhibits of this fair, more than to say in a general way that a large number of mechanical models were contributed, many of them being furnished by mechanics in this city. The fair, too, proved a stimulus to the Institute, for during the year it rapidly increased in membership; its course of lectures attracted always good audiences and proved a source of considerable revenue; the library was enriched with the addition of many new and standard works, and the reading-room was enlarged and comfortably fitted up for the accommodation of its visitors. In January of that year the annual election of officers was held, and resulted as follows: S. D. Childs, president; H. L. Fulton, first vice-president; Jason Gurley, second vice-president; W. Blair, treasurer; S. S. Foster, recording secretary; Zebina Eastman, corresponding secretary; J. G. Brown, librarian. The directors for this year were: C. M. Gray, I. Speer, J. Meeker, I. L. Milliken, A. Bent and S. Johnson. Two years now elapsed, of the events of which it has been found impossible to obtain any record, and no information except that which may be gleaned, or rather inferred from later years. In a general way it can be said they were prosperous and happy years for the Institute. This much is deduced from a statement made by a member who, in writing a brief sketch of it, says: "Until the year 1857 the prosperity of the society continually increased. In January, 1848, an election of officers was held, and Azel Peck, a prominent member of the society and later its benefactor, was chosen its president. The other officers were: S. I. Lowe and S. S. Foster, vice-presidents; J. E. Wheeler, corresponding secretary; O. Jagger, librarian; Isaac Speer, treasurer; Sanford Johnson, C. M. Gray, Peter Graff, H. H. Husted, A. D. Gibbons, and G. R. Sloat, directors. The regular meetings were still held in the Saloon Building, on the first Tuesday evening in each month. During 1848 the lecture course of the Institute was the best yet given, consisting of lectures on the arts and sciences, and delivered by the best informed and most scientific men in the city, who prepared them for the special benefit of the members of the Institute, more than for the edification of the general public. Although the regular meetings of the society were held but monthly, the library was kept constantly open to its members, each of whom was entitled to draw from it one book at a time, to be retained not longer than one week without renewal. The officers for 1849 were: Edward Burling, president; Robert Foss and R. Shephard, vice-presidents; A. D. Taylor, recording secretary; George Davis, corresponding secretary; and I. Speer, treasurer. The directors were: H. H. Husted, I. L. Milliken, P. L. Updike, W. Anderson, P. W. Gates, and Ives Scoville; lilbrarian, Oliver Jagger.

In November of the following year the question of establishing an evening school for the benefit of apprentices and the sons of members, was discussed, and at a meeting of the board of directors held on the 19th of the month, it was determined to start such a school. A call was issued for competent persons who were will-

ing to teach to send in their names to the board at once. It was also decided to devote four evenings of the week to the school and one to the lectures. The experiment proved from the start a success; and the night-school was regularly maintained for years. The rate of tuition was but trifling, hence the sessions were attended and the school, as an educator, became a recognized power in the community. In this year Hon. William Bross delivered before the society a course of interesting and instructive lectures on geology. Dr. Blaney also lect-ured on various occasions on "Chemistry as applied to the Arts." It was during this year, too, that the Smithsonian Institute at Washington donated copies of its own publications to the society. Dr. J. E. McGirr, a then prominent physician of Chicago, also delivered a series of lectures on physiology and hygiene for the especial benefit of the young students at the night-school. The officials for this year were William H. Kennicott. president; 1. Speer, vice-president and treasurer; A. D. Taylor, recording secretary and librarian; Alfred Dutch, corresponding secretary. The directors were S. D. Childs, William Bross, O. P. Hathaway, J. V. A. Wemple, Edward Burling and G. R. Sloat. At the beginning of 1851 the annual election of officers was again held and H. H. Husted chosen president; A Bent and J. Couthbel, vice-presidents; A. D. Taylor and G. R. Sloat, secretaries; Isaac Speer, treasurer; A. D. Taylor, librarian. The directors were H. L. Fulton, A. C. Wood, Edward Burling, Henry Colson, Elihu Granger and S. T. Hinckley. This year little is to be noted except the continued growth and prosperity of the society, and that in the winter its lecture course was better than ever before in its history, being supplied with the most celebrated lecturers then before the public. The annual fair held in October, 1851, was a marked success. The officers elected in 1852 were G. R. Sloat, president; W. H. Kennicott and George W. Snow, vice-presidents; A. D. Taylor, recording secretary and librarian; S. D. Childs, corresponding secretary; and Isaac Speer, treasurer. The directors were H. L. Fulton, J. A. Kennicott, Peter Page, James Curtiss, Allen Vane and F. E. Demiry. About this time a change was made in the constitution of the society. by which citizens other than mechanics were admitted to its privileges. This had the effect to greatly increase its prosperity, as well as to extend its influence and widen its field of usefulness. Its library numbered over two thousand choice volumes and was open to the public, as well as to the members of the Institute, the year round.

With the opening of the year 1853, the Institute doubtless had reached the zenith of its prosperous and highly useful career; it had nearly three hundred niembers, a library of over two thousand volumes, and the best winter lecture course given before any association or society in the land. This year Hon. John Wentworth made donation to the society of a great number of books and an extensive collection of important public documents. Beginning on the first Tuesday in November was held its sixth annual fair at the city hall. This was among the best and most important in its character of any that had been conducted.

The officers for 1853 were Robert Foss, president; Peter Page and Ives Scoville, vice-presidents; Lewis Dodge, secretary; Isaac Speer, treasurer; directors, Stephen Derr, A. S. Calvert, George P. Hanson, John C. Rue and James Hollingsworth; Lewis Dodge, secretary of the board.

The year closed with the society in a most satisfactory condition, and in January, 1854, it had the grati-

fication of knowing that its last art and mechanical fair had been the means of calling out a display of exhibits, the like of which had never been equaled by any society in the The officers elected for 1854 were Peter Graff, president; James F. Jillson and E. Granger, vice-presidents; Louis Dodge and George P. Hansen, secretaries; Isaac Speer, treasurer, and Louis Dodge, librarian. Directors: Stephen Derr, Ives Scoville, E. McAuthur, S. D. Childs and Noble Martin. In 1855 the Institute had reached that point in its history where its importance was recognized in a most flattering and sustantial manner, both by the State and Nation. Congress passed an act providing that the scientific reports and books of the Smithsonian Institute should be printed and distributed to the three most important institutions in the country The Chicago Mechanics' Institute was included among the three, and received its due share. At this time the State Executive Committee on Agriculture at Springfield authorized the Institute to hold and conduct an agricultural and mechanical fair in this city. This it did in the fall of 1855, being the first general agricultural and mechanical fair ever held in the State of Illinois. The officers then were: C. T. Boggs, president; William Price and Ives Scoville, vice-presidents; C. E. Holmes and H. M. Zimmerman, secretaries; Isaac Speer, treasurer, and E. C. Holmes, librarian. The directors were E. Granger, L. Waterhouse, S. D. Childs, I. L. Milliken, N. Mason and H. W. Zimmerman.

In 1856 the officers of the Institute began making extensive arrangements for enlarging its quarters, extending the library, and also providing a suitable place in which to hold its annual fairs. In doing this they were simply carrying out the privileges granted in their charter, which gave them the right to establish a permanent public library, a thing which the committee had now determined to do. They therefore divided the library into two departments, one for circulation, the other for reference. In the circulating department there were now over two thousand volumes, embracing the best works in all departments of miscellaneous literature, while in the reference library were fifteen hundred volumes, including permanent and valuable publications in every branch of knowledge. An official catalogue of the books in both libraries was also prepared. The committee issued an address to the public, from which is taken the following extract:

"Our city and country are so rapidly filling up with new citizens that it could not be expected that the public should be fully advised of the value of every institution which has been prepared in advance for their good. Therefore we invite the mechanics of Chicago, and the public generally, to visit our hall, attend our meetings, and avail themselves of the library, lectures, and privileges which this institute may be able to confer."

The Institute during 1856 held regular weekly meetings for the exhibition of any new invention, natural curiosity, chemical compounds, or rare specimens of art. To these meetings strangers and visitors in the city were cordially invited; and in any event they were always well attended.

The officers for 1856 were George P. Hansen, president; Isaac Speer and I. L. Milliken, vice-presidents; Urich Gregory and Z. Eastman, secretaries; U. Gregory, librarian, and Isaac Speer, treasurer. The directors were N. S. Cushing, Z. Eastman, S. D. Childs, U. Gregory, Lewis Dodge and R. E. Moss. With the beginning of the year 1857, and at which period its history in this volume must be closed, the Institute had never seen brighter days, nor had it ever had rosier prospects for the future. But clouds were gathering, which, although then unseen and unnoticed, were but

the forerunners of the storms which so swiftly followed. Already men of sagacious minds and far-seeing wisdom had predicted a financial crash as inevitable, and that, too, in the near future. It is a matter of history now that it came, ruthless and terrible in its destructive effects upon trade, commerce, business, values. Everything went down before it. The Chicago Mechanics' Institute, unfortunately, had just contracted a considerable indebtedness, which, had not this trouble come, it would have easily paid. But the fact that its officers and the warmest friends of the Institute were themselves seriously embarrassed, many of them being financially ruined, as a matter of course, seriously interfered with the carrying out of certain plans already fully matured, and upon the realization of which the highest hopes had been reared for the future welfare of the society.

## YOUNG MEN'S ASSOCIATION.

The predecessor, in time only, of the present Public Library of Chicago was an institution, called the "Young Men's Association of Chicago," afterwards changed to the "Chicago Library Association." On the evening of January 30, 1841, Walter L. Newberry, Mark Skinner, Hugh T. Dickey, Peter Page, Walter S. Gurnee, William L. Church and a number of other citizens convened at the chamber of the Common Council for the purpose of establishing a library association. The movement met with a fair amount of encouragement, and on February 6 a constitution was adopted and the following officers elected: W. L. Newberry, president; Mark Skinner, vicepresident; Hugh T. Dickey, corresponding secretary; Leroy M. Boyce, recording secretary; Walter Vail, treasurer; and Charles H. Starkweather, Peter Page, Walter S. Gurnee, Francis Howe, Norman B. Judd, William L. Church and Charles Sturtwait, managers.

"The first election," says Mr. Page, "was made, from motives of policy, a very novel and interesting affair. Five tickets were put into the field, the Regular, the Opposition, the Lawyers, the Respectable, and the Whole-Hog tickets, which last was headed by a printed cut of a genuine porker. The regular ticket was elected, Mr. Newberry being chosen president." Seth T. Otis, the third president of the association and always one of its active and influential members, has written the following interesting account of its formation and the

earlier days of its history. He says:

"Up to 1841 there had been no permanent reading-room in the city, the lack of which was felt to be a serious drawback to the best interests of the young of the community. Dr. Sidney Sawyer and myself had formerly been members of a young men's association in the city of Albany, N. Y., which had prospered finely at the low tax of \$2 per annum to each of its members. advocated the establishment of a similar institution here and urged upon the citizens of Chicago its necessity and the benefits to be derived from it. No one entered into active opposition against the measure, but many doubted its success at so low a tax per capita as was proposed, and with the limited number of subscriptions we could obtain. But we proposed to bring in all classes of citizens, and I believed it could be done. At length about the 10th of January, 1841, a half dozen gentleman friendly to the enterprise, met at my hardware store one evening and we decided the effort should at once be made. Hon, Mark Skinner drew up a subscrip-tion paper and all present signed it. It was left with me to circu-late, and I went at it with a will. At the end of a couple of weeks, I should say, we had nearly one hundred and fifty subscribers, each one of whom had paid his subscription fee of \$2 in advance, with the understanding, however, that it would be refunded in event the association was not formed. At this point a mischievous and unwarranted report was put in circulation, by one or more leading mechanics, that the association was to be an aristocratic and exclusive affair, and their friends were advised by them to keep aloof and form an association of their own.\*\*\* During the week I was assisted by other members of the committee in getting additional subscribers. I was anxious that an even two hundred should be obtained, and to accomplish this I personally advanced the tax for a dozen or more young men, who afterwards became members of the association. When the two hundred subscribers had been obtained, I pasted all the subscription papers upon a piece of canvas and attached it to a wooden roller. On the 6th of February I unrolled the long list of subscribers, hung it over the chairman's desk and handed him a package containing four hundred dollars in cash as the result of my canvass. It is pleasant to me as I write (November, 1880) to remember at this day the outburst of applause which followed. Nearly every subscriber was present and the best of feeling prevailed. It was voted at once that the cash on 'and should be considered as initiation fees, and used in fitting up a reading-room; and that an annual tax of \$2 should be paid in addition. It was also voted that the association should be known by the name of the 'Young Men's Association of. "be'tily of bicago.' A reading-room on the northwest corner of Lak, and Clark streets was leased at an annual rental of \$125, and fitted up under the supervision of Peter Page. It was supplied with the principal newspapers and periodicals published at that time. The nucleus for a library was provided by a selection of books presented to the association by Walter L. Newberry, on the 24th of April, 1841. This was immediately increased by generous donations from Messrs. S. Lisle Smith, Dr. S. B. Ogden, W. H. Clark, Dr. S. Sawyer and other citizens and members of the association."

Thus by such men and for such objects as already stated the Association was formed. In the winter after its organization, the first lecture was delivered before the Association by William M, Brown, and during the same season, lectures on various subjects were delivered by Dr. Brainard and others. Afterward the Association occupied commodious and pleasant rooms in the old Saloon Building on the corner of Lake and Clark streets. At the discontinuance of the Chicago Lyceum, the library of that society found lodgment on the shelves of the Association, sometime about 1845. The Association library was subsequently removed to Warner's Block, on Randolph Street, and here rooms on the third floor were occupied, Better quarters were secured in the brick block at 95 Washington Street. The next move was into the Portland Block; from there, in 1866, to Metropolitan Hall, corner of Randolph and LaSalle streets, where it occupied rooms on the second floor, behind the lecture room a public hall, also leased by the Association, and there remained until destroyed by the fire of 1871.

The Association was incorporated January 30, 1851, but this act did not change its character, except as to its legal rights and liabilities,\* that is, it was never in the strict sense of the term a public library, as it was open only to its paying or elected members. It was a subscription library, wholly different in its character from the Public Library of to-day, which is supported by public taxation and which is free to all; being sustained in the same manner, and as open to the public as are

the public schools of the city.

The presidents of the society up to 1857 were; Walter L. Newberry, elected February, 1841; Hugh T. Dickey, 1842; Seth T. Otis, 1843; Peter Page, 1844; David S. Lee, 1845; George Manierre, 1846; Samuel J. Lorne, 1847; Walter Wright, 1848; James H. Reed, 1849; Thomas Hoyne, 1850-51; H. G. Shumway, 1853; Samuel D. Ward, 1854; Henry E. Sulyle, 1855; Thomas B. Bryan, 1856; George W. Gage, 1857. The founders of this institution were, as one writer has said, "young men who having selected this city as their place of residence, were desirous of securing, at an early day, the establishment of an association which should afford at a trifling expense the means of intellectual improvement, not only for themselves, but for

<sup>\*</sup> From the rules of the Association: "Any member may have the privilege of introducing strangers to the rooms of the Association, by recistering their names in a book to be kept for that purpose; and such strangers shall have free access to the rooms of the Association for two weeks after such introduction. Any person may have access to the rooms of the Association by paying therefor fifty cents per month."

others who afterwards might avail themselves of its privileges." From the time of its organization up to its incorporation in 1851, the Association was sustained by the voluntary contributions and efforts of its members and during this period its success fully equaled the expectations of its projectors. At the beginning, the Association started with only about one hundred volumes, contributed by friends; but in 1851, this number was increased to over twenty-five hundred, and by the spring of 1857 to four thousand seven hundred and fifty, embracing works from standard authors in literature, fiction, travel, art, science, history, and biography, making a valuable library, the benefit of which to its patrons can hardly be overestimated. In fact, at this stage of its existence, its growing value and importance were fully recognized, and it was already regarded as one of the indispensable institutions of the city. Here, for the present, it is necessary to close the account of its further growth and works, to be again taken up and carried along in proper time and order in the second volume of this work.

## THE CHICAGO LYCEUM.

The Chicago Lyceum, an institution in which for many years were centered largely the social, as well as the intellectual interests of Chicago's citizens, was instituted December 2, 1834. From this time until the 22d of December of the following year, it had a mere informal existence, no attempt being made for a permanent organization until the last-named date. At this time, however, a constitution was adopted, by-laws framed, and the following persons chosen its first officers: A Cowles, George Manierre, William Jones and O. M. Dorman, vice-presidents; (name of president not given;) George O. Haddock, recording secretary; E. I. Tinkham, treasurer, and H. K. W. Boardman, librarian. At its weekly meetings were discussed questions of importance, and there was not a prominent citizen of Chicago in those days who was not a member of the Lyceum and who did not take a lively interest in its proceedings.

Hon. Thomas Hoyne, who was an early member of the Lyceum, and in 1840 its secretary, recalled just prior to his death, which occurred July, 1883, some of his recollections of its early days. He said:

" It was the foremost institution in the city, when I came here in 1837. At the time I became a member, not a man of note, not a man in the city of any trade or profession, who had any taste for intellectual and social enjoyment, who loved books, conversation and debate, but who belonged to the Lyceum. Why, to-day I can recall the names of old friends, by scores almost, whose eloquence I have listened to in its meetings. Some of them have long since paid the debt of nature; others are still living, honored and respected citizens of this and other towns throughout the country, and not a few have, since the days when they were active members of the Chicago Lyceum, achieved for themselves brilliant reputations in their various walks in life. When I came here the society had. for those days, an excellent library, consisting of, as I remember, over three hundred volumes. Its meetings were generally held in the old court-room, corner of Randolph and Clark streets. I say were generally held there, for it was not infrequent that the bad appoint the meetings in a locality most convenient for the majority to attend. Later its meetings were half in the majority weather and the condition of the streets made it necessary for us to to attend. Later its meetings were held in the hall of the old Saloon Building and in the Presbyterian church. We ran along until 1243 or 1844. The city was then entering upon its career of rapid growth and development, which has since astonished the world, and which about that time absorbed the interests of the citizens so much that the Lyceum meetings began to be poorly attended and finally, as an institution, it died from sheer neglect.

Among the leading members of the Lyceum in its flourishing days, were J. C. Butterfield, E. G. Ryan, late Chief Justice of Wisconsin, "Buck" Morris, Dr.

Egan (noted as being the best after-dinner speaker of his time in the country), Stephen Lisle Smith, Dr. John Tr. Temple, Judge Brown, Mark Skinner, George Manierre, J. H. Foster, J. Y. Scammon, Thomas Hoyne, G. W. Meachan, Dr. Boone, Rev. I. T. Hinton, C. V. Dyer, and many others of not less repute and standing, whose names are not at hand. Rev. I. T. Hinton was the pastor of the Baptist Church, and a remarkably able man. He used frequently to deliver public lectures on various topics to the citizens of Chicago, and such was his reputation as a scholar and orator, that rarely did he find a room sufficiently large to contain his audiences. C. V. Dyer, another active member of the Lyceum, was the acknowledged wit of the town, and aside from this quality, was a man of sound worth and merit. Mr. Hoyne, related of him the following anecdote, illustrating his ready wit:

"The old cemetery was in those days located in what is now Lincoln Park. Beyond that was only a scattering settlement. Here, to this locality, about the year 1840, Mr. Dyer moved, from a former residence in the city. One day, in the street, a friend accosted him with the remark, 'Hello, Dyer, I don't see you very often; where do you live now?' 'O, I am very comfortably situated,' replied Mr. Dyer without relaxing a muscle of his features, 'I have a home beyond the grave.' His friend saw the point, circulated the story, and Dyer was long known as the sojourner on earth who had a 'home beyond the grave.'

As an institution exercising a healthy and energizing influence in this community, as promoting the social and intellectual interests of the society of early Chicago, the Lyceum deserves more than the passing notice here given. It is to be regretted that the material is not obtainable from which to write a fuller history of its life and growth from its organization to the close of its existence as a distinct and separate society.

On the discontinuance of the Chicago Lyceum, the Young Men's Association was organized (see article on same), and the library of the first-named society finally drifted into the hands of the latter, where it remained

until destroyed by fire October, 1871.

Young Men's Lyceum.—This institution was exclusively a young men's affair. No doubt its origin was a direct outgrowth of the influences emanating from the Chicago 'Lyceum, inspiring the young to higher intellectual attainments. It was organized September 25, 1843, with the following officers: David D. Griswold, president; Edwin C. Stone, vice-president; William H. Scovill, secretary, and Edward Morey, treasurer. For some reasons (whether from lack of proper support, or whether merged into the Young Men's Association) which it has been impossible to ascertain, the Young Men's Lyceum was only a short-lived institution. After much research, nothing could be learned of its history more than has been here given. It was little more than a debating-club.

## SOCIETIES OTHER THAN SECRET.

Of this class there were many, some purely social in their character, others combining charitable and social features. From 1840 to 1857 there were: New England Society, organized in 1846; W. H. Brown, president; George A. Robb, George W. Snow, John P. Chapin, J. B. F. Russell, W. T. DeWolf, Jacob Russell, vice-presidents; S. W. Stebbins, secretary; E. I. Tinkham, treasurer; Rev. W. M. Barlow, chaplain; O. Lunt, E. H. Haddock, A. H. Squier, John S. Wright, E. E. Larned, Thomas Dyer, managers; J. A. Wight and S. C. Clarke, librar committee. This society met each

year on the 22d of December, to celebrate the landing

of the Pilgrims.

The Illinois St. Andrew's Society was organized January, 1846; A. S. Sherman, president; William Brown, vice-president; James Smith, treasurer; John Sheriffs, secretary; John Olston, assistant secretary; Alexander Morrison, Hugh Dunlop, Alexander White, Solomon McKitchen, managers. Held four meetings each year, second Thursdays in February, May, August and November; also an anniversary assembly on St. Andrew's Day.

St. George's Society, organized April 27, 1847. Benevolent in purpose, Daniel Elston, president; S. J. Lon, James Dike, vice-presidents; J. Dike, treasurer; J. McMilluns, secretary. Four meetings annually, 10th of April, July, October, January.

Excelsior Society, organized December 18, 1848;

one hundred and twelve members, natives of New York. Mahlon D. Ogden, president; I. N. Arnold, Dr. Brainard and John Beard, vice-presidents; H. G. Shumway, secretary; William Blair, treasurer.

Chicago Bible Society, organized April 7, 1840. O. Lunt, president; O. M. Dorman, W. F. Domimers, A. J. Brown, G. W. Southworth and Thomas George, vice-presidents; T. B. Carter, secretary; A. G. Downs,

treasurer.

St. Peter's Society. Benevolent in purpose. Organized November 15, 1847. Charles Bumgarten,

president; Christian Lohn, vice-president; Peter Kerich, secretary; Jacob Weidzel, treasurer.

Hibernian Benevolent Society, organized in 1848. Monthly meetings at Apollo Hall. Dr. J. E. McGirr, president; James McMullen, vice-president; Charles McDonnell and John Murphy, secretaries; John Breen,

Sons of Penn, a society composed of those who were natives of Pennsylvania, was organized January 16, 1850. David Rutler, president; Dr. Henry Ritchie, A. H. Hoge and Calvin DeWolf, vice-presidents; W. W. Danenhower, secretary; Thomas Parker, treasurer; Rev. A. M. Stewart, chaplain.

Hebrew Benevolent Society, organized April 1, 1854,

and had in 1856 forty members.

Chicago Phrenological Society, organized November, 1855.

Chicago Historical Society,\* organized April 24, 1856. W. H. Brown, president; W. B. Ogden and J. Y. Scammon, vice-presidents; Dr. H. Ray, secretary; S. D. Ward, treasurer; William Barry, librarian.

There were in 1857 the following societies, the names of which suggest without comment their charac-

ter and objects:

The American Sunday School Union, the American Protestant Association, Young People's Christian Association, the American Tract and Mission Society, and the American Tract Society.

\* Will be treated fully in subsequent volumes.

## BANKS AND BANKING.

THE CURRENCY of the early days prior to 1830 was subject to wide suspicion, limited only by the extreme necessities which make money necessary at any cost. In fact, the volume of money coin in all the regions west of Detroit was too meager to be computed. Money was little needed, as nearly the entire business consisted of barter of blankets, beads, traps, guns and ammunition with the Indians for the products of the hunt. The very early exchanges which involved the payment of money were made through the Indian traders. Perhaps Gurdon S. Hubbard was the first white man who ever did anything resembling a banking business in Chicago. Although not then known as a banker, he kept a good credit account at several points east of Chicago and could draw a bill of exchange on Buffalo which was sure to be honored on presentation. The currency in use at that time was mostly silver coin. No paper money was known except such rude scrip as might be issued by the Indian traders, which, to their credit, was always redeemed according to promise.

FIRST BANKING LAW.—No State legislation on banking which had any direct bearing on the banking business of Chicago was had prior to 1835. As early as 1816 an act was passed incorporating the "President, Directors and Company of the Bank of Illinois," at Shawneetown. It was the earliest effort at legal banking in Illinois and the provisions of the charter were not unlike those of the other "wild-cat" banks that furnished the worthless and irredeemable paper money scattered through the West in early times, and which was the only paper money issued by banks then known in Chicago. The act is given entire as furnishing the modern reader a definite idea of the legal basis on which "wild-cat" banking formerly flourished. It was as

follows:

An Act to incorporate the President, Directors and Company

of the Bank of Illinois at Shawneetown.

SECTION I. Be it enacted by the Legislative Council and House of Representatives of the Illinois Territory, and it is hereby enacted by the authority of the same, that a bank shall be established at Shawneetown, the capital stock whereof shall not exceed three hundred thousand dollars each, one-third thereof to remain open to be subscribed by the Legislature of this Territory and State, when a State Government shall be formed, which Territory or State shall be entitled to such part of the dividend of the said corporation in proportion to the amount actually subscribed by such Territory or State, which one-third shall be divided into shares of one hundred dollars each, in the same manner as the individual stock is divided, and that subscriptions for constituting the said stock shall, on the first Monday in January next, be opened at Shawneetown, and at such other places as may be thought proper, under the superintendence of such persons as shall hereafter be appointed, which subscriptions shall continue open until the whole capital stock shall have heen subscribed for: Provided, however, That so soon as there shall be fifty thousand dollars subscribed for in the whole and ten thousand dollars actually paid in, the said corporation may commence business and issue their notes accordingly.

SEC. 2. Be it further enacted, That it shall be lawful for any persons, or partnership, or hody politic to subscribe for such or so many shares as he, she, or they may think fit, nor shall there be more than ten shares subscribed in one day by any person, copartnership or body politic, for the first ten days after opening subscriptions. The payments of said subscriptions shall be made by the subscribers respectively, at the time and manner following—that is to say, at the time of subscribing there shall be paid into the hands of the person appointed to receive the same, the sum of ten dollars in gold or silver on each share subscribed for, and the residue of

the stock shall be paid at such times and in such installments as the directors may order: Provided, That no installment shall exceed twenty-five per cent on the stock subscribed for, and that at least sixty days' notice be given in one or more public newspapers in the Territory: And provided also, that if any subscriber shall fail to make the second payment at the time appointed by the directors for such payment to be made, shall forfeit the sum so by him, her, or them first paid, to and for the use of the corporation.

SEC. 3. Be it further enacted, That all those who shall become subscribers to the said bank, their successors and assigns, shall be and they are hereby enacted and made a corporation and body politic, by the name and style of "The President, Director and Company of the Bank of Illinois," and shall so continue until the first day of January, one thousand eight hundred and thirty-seven, and by that name shall be and is hereby made able and capable in law, to have, purchase, receive, possess, enjoy, and retain to them and their successors, lands, rents, tenements, hereditaments, goods, chattels and effects of what kind, nature or quality soever, to an amount not exceeding in the whole five hundred thousand dollars, including the capital stock aforesaid, and the same to grant, demise, alien, or dispose of, to sue and be sued, plead and be impleaded, answer and answered, defend and be defended, in courts of record or any other place whatever; and also to make, have and use a seal, and the same to break, alter and renew at pleasure, and also to ordain, establish and put into execution such by-laws, ordinances and regulations as they shall deem necessary and convenient for the government of the said corporation, not inconsistent with the laws of the Territory or constitution, and generally to do, perform and execute all and singular acts, matters and things which to them it may appertain to do, subject however to the rules, regulations, limitations, and provisions here-

inafter prescribed and declared.

SEC. 4. Be it further enacted, That for the well ordering of the affairs of the said corporation, there shall be twelve directors, the first election of whom shall be by the stockholders by plurality of votes actually given, on such day as the person appointed to superintend the subscriptions for stock shall appoint, by giving at least thirty days notice in all the public newspapers of the Territory, and those who shall be duly chosen at any election shall be capable of serving as directors by virtue of such choice, until the full end or expiration of the first Monday of January next ensuing the time of such election, and no longer; and on the first Monday of January in each and every year thereafter, the election for directors shall be holden, and the said directors at their first meeting after each election, shall choose one of their number as presi-

dent

SEC. 5. Be it further enacted, That in case it should happen at any time that an election for directors should not be had upon any day, when, pursuant to this act, it ought to have been holden, the corporation shall not for that cause be considered as dissolved; but it shall be lawful to hold an election for directors on any other day, agreeable to such by-laws and regulations as may be made for the government of said corporation, and in such case the directors for the time being shall continue to execute and discharge the several duties of the directors until such election is duly had and made; anything in the fourth section of this act to the contrary notwithstanding: And it is further provided, That in case of death, resignation or removal of director or directors, the vacancy shall be filled by election for the balance of the year.

Sec. 6. Be it further enacted, That a majority of the directors, for the time being, shall have power to appoint such officers, clerks and servants under them, as shall be necessary for executing the business of the said corporation, and to allow them such compensation for their services respectively as shall be reasonable, and shall be capable of exercising such other powers and authorities for the well governing and ordering of the affairs of the said corporation as shall be prescribed, fixed and determined by the laws, regulations and ordinances of the same: Provided always, That a majority of the whole number of directors shall be requisite in the choice of a president and cashier.

SEC. 7. Be it further enacted, That the following rules, restrictions, limitations and provisions, shall form and be the fundamental articles of the constitution of the said corporation, to wit:

(1). The number of votes to which the stockholders shall be

entitled in voting for directors, shall be according to the number of shares he, she or they may respectively hold, in the proportions following—that is to say, for one share and not more than two shares, one vote; for every two shares above two and not exceeding ten, one vote; for every four shares above thirty and not exceeding thirty, one vote; for every six shares above thirty and not exceeding sixty, one vote; for every eight shares above sixty and not exceeding one hundred, one vote; for every ten shares exceeding one hundred shares, one vote; and after the election, no share or shares shall confer a right of voting, which shall not have been holders three calendar months previous to the day of election.

(2). The Governor of the State or Territory is hereby appointed agent for the Legislature to vote for president, directors and cashier of said bank, and is hereby entitled to exercise the right of voting for the same in proportion to the number of shares actually subscribed for by the Legislature, in the same ratio that individuals, or other bodies politic or corporate, are entitled to vote for; and the said agents hereby appointed shall exercise the power hereby vested in him until the Legislature shall make other regula-

tions respecting the same, and no longer.

(3). None but a bona fide stockholder, being a resident citizen of the Territory, shall be a director; nor shall a director be entitled to any other emolument than such as shall be allowed by the stockholders at a general meeting, but the directors may make such compensation to the president for his extraordinary attendance at the bank as shall appear to them reasonable and just.

(4). Not less than four directors shall constitute a board for the transaction of business, of whom the president shall always be one, except in case of sickness, or necessary absence, in which case his place may be supplied by any other director, whom he, by writing under his own hand, may depute for that purpose.

(§). Any number of stockholders, not less than fifteen, who shall be proprietors of not less than fifty shares, shall have power to call a general meeting of the stockholders for purposes relative to the institution, by giving at least thirty days notice in one or more of the public newspapers of the Territory, specifying in such notice the object or objects of such meeting, and may, moreover, appoint three of their members as a committee to examine into the state and condition of the bank, and the manner in which its affairs have been conducted: Provided, That no member of such committee shall be a director, president or other officer of any other bank.

(6). Every cashier, before he enters upon the duties of his office, shall be required to give bond with two or more sureties to the satisfaction of the directors in a sum not less than \$10,000, conditioned for his good behavior and the faithful performance of his duties to the said corporation; and the other officers and servants shall also enter into bond and security in such sum as the president and

directors may prescribe.

(7). The lands, tenements, and hereditaments which it shall be lawful for the said corporation to hold, shall be only such as shall be requisite for its immediate accommodation in relation to the convenient transaction of its business, and such as shall have been bona fide mortgaged to it by way of security, or conveyed to it in satisfaction of debts previously contracted in course of its dealings, or purchased upon judgments which shall have been obtained for such debts.

(8). The total amount of debts which the said corporation shall at any time owe, whether by bond, bill or note or other contract, shall not exceed twice the amount of their capital actually paid over and above the moneys then actually deposited in the bank for safe keeping; and in case of excess the directors, under whose administration it shall happen, shall be liable for the same in their natural and private capacities, and an action of debt may be brought against them, their or any of their heirs, executors or administrators, in any court competent to try the same, or either of them, by any creditor or creditors of the said corporation; but this provision shall not be construed to exempt the said corporation, or the lands, tenements, goods or chattels of the same from being liable for and chargeable with the said excess; such of the said directors who may have been absent when the said excess was contracted or created, or who may have dissented from the resolution or act whereby it was contracted or created, may respectively exonerate themselves from being so liable by forthwith giving notice of the fact, and of their absence or dissent, at a general meeting of the stockholders, which they shall have power to call for that purpose.

(9). The said corporation shall not directly or indirectly deal or of goods really and truly pledged for money lent and not legally redeemed in due time, or of goods which shall be the produce of its lands; neither shall the said corporation take more than at the rate of six per cent per annum for or upon its loans or discounts.

(10). The shares of the capital stock of the said corporation shall be assignable and transferable at any time, according to such rules as shall be established in that behalf, by the laws and ordi-

nances of the same; but no stock shall be transferred, the holder thereof being indebted to the bank, until such debts be satisfied, except the president and directors shall otherwise order it.

(11). The bills obligatory and of credit, under the scal of said corporation, which shall be made payable to any person or persons, shall be assignable by an endorsement thereupon, and shall posses the like qualities as to negotiability, and the holders thereof shall have and maintain the like actions thereon as if such bills obligatory and of credit had been made by or on behalf of a natural person; and all bills or notes which may be issued by order of the said corporation, signed by the president and countersigned by the principal cashier or treasurer thereof, promising the payment of money to any person or persons, his, her or their order, or to bearer, though not under the seal of the said corporation, shall be binding and obligatory upon the same, in like manner and with like force and effect as upon any private person or persons, if issued by him, her or them, in his, her or their private or natural capacity or capacities, and shall be assignable and negotiable in the like manner as if they were so issued by such private person or personsthat is to say, which shall be payable to any person or persons, his, her or their order—shall be assignable by endorsement, in like manner and with like effect as bills of exchange now are; and those which are payable to bearer shall be assignable and negotiable by delivery only

(12). If alf yearly dividends shall be made of so much of the profits of the bank as shall be deemed expedient and proper; and once in every three years the directors shall lay before the stock-holders, at a general meeting, an exact and particular statement of the debts which shall have remained unpaid, after the expiration of the original credit, for a period of treble the time of that credit, and of surplus of profit (if any) after deducting losses and dividends. If there shall be a failure in the payment of any part of any sum subscribed to the capital stock of said bank, the party failing shall lose the dividend which may have accrued prior to the time of making such payment during the delay of the same.

SEC. S. And be it further enacted, That the said corporation shall not at any time suspend or reluse payment in gold and silver, or of any of its notes, bills or obligations, nor of any moneys received upon deposit in said bank or in its office of discount and deposit; and if the said corporation shall at any time refuse or neglect to pay on demand any bill, note or obligation issued by the corporation according to contract, promise or undertaking therein expressed, or shall neglect or refuse to pay on demand any moneys received in said bank, or in its office aforesaid or deposit, the person or persons entitled to receive the same, then, and in every such case, the holder of any such note, bill or obligation, or the person or persons entitled to demand and receive the same, shall recover interest in the said bills, notes, obligations or moneys until the same shall be fully paid and satisfied at the rate of twelve per centum per annum from the time of such demand as aforesaid: Provided, That the Legislatute of this Territory may, at any time hereafter, enact laws to enforce and regulate the recovery of the amount of the notes, bills, obligations, or debts, of which payment shall have been refused as aforesaid, with the rate of interest above mentioned; vesting jurisdiction for that purpose in any courts

either of law or equity within this Territory.

SEC. 9. Be it further enacted, That John Marshall, David Apperson, Samuel Hays, Leonard White and Samuel R. Campbell, or any three of them, shall be commissioners for the purpose of receiving subscriptions and who shall have power to appoint a person to receive the money required to be paid at the time of subscribing, and the said receiver shall, as soon as the directors appointed, pay over the same into the hands of such person as the

directors may direct.

SEC. 10. Be it further enacted, That the aforesaid corporation shall not be dissolved previous to the expiration of their charter, nor until their debts, contracts, notes, bills of exchange, and undertakings in their corporate capacity, shall be finally and faithfully settled: Provided, also, That after the expiration of their charter, they shall not transact business, according to the true intent and meaning of this act, further than to settle and close their contracts as above provided. This act to take effect from and after its passage.

WILLE HARGRAVE, Speaker of the House of Representative.

WILLIS HARGRAVE, Speaker of the House of Representatives.

PIERRE MENARD, President of the Legislative Council.

Approved December 28, 1816.

NINIAN EDWARDS. (Governor.)

Under the Territorial Government, two other banks mere chartered, one at Edwardsville and one at Cairo, under charters the provisions of which were similar to that above quoted. Their existence had ceased before Chicago became an element in the banking of the State. The Cairo Bank had a somewhat mythical existence until £836, at which time it was brought into actual life

for speculative purposes, issued its full quota of paper money, flourished for a time, and finally succumbed to the rough financial storms of the times. Its charter was

repealed on the 4th of March, 1843.

The Edwardsville Bank and the Bank of Illinois at Shawneetown became banks of deposit, and received the public moneys arising from the sale of public lands in Illinois. The Edwardsville Bank failed in 1819-20, owing large sums to depositors, which it never paid. The United States brought suit against the bank for its deposits and obtained a judgment for \$54,000, which proved valueless. The bills, of course, became worthless. The bank at Shawneetown showed more vitality, being under more skillful financial management. It went into business immediately after its charter was granted, and being a repository of Government funds, acquired an extensive credit, which it kept unimpaired until the general failure of all the Kentucky banks in 1821. It was one of the last to suspend, which it did August 21, and was one of the very few banks of the time that ever paid even a dividend on its indebtedness. It managed to compromise its debts both public and private, by means it is not necessary here to explain, and save its franchises under its charter. It remained dormant until February 12, 1835, at which time an act was passed to extend its charter for twenty years, from the first day of January, 1837. Under the extended charter the bank was authorized to receive interest for loans made: "On loans for six months or under, at the rate of six per cent per annum; and on loans over six months at the rate of eight per cent per annum." All stock not responding to the calls to be forfeited, and the one hundred thousand dollars of stock reserved to the State to be sold to the highest bidder, and the proceeds paid over to the State Treasurer for the benefit of the State. In lieu of all other taxes, the Bank was to pay into the State Treasury, annually, one-half of one per cent on the capital stock paid in.

STATE BANKS .-- On the adoption of the State Constitution, August 26, 1818, there was in existence within the bounds of the State, only the bank of Shawneetown, then in good credit, and the Edwardsville Bank already in the throes of dissolution. The constitution first adopted declared that there should be no other banks or moneyed institutions in Illinois, but those already provided by law, except a State Bank and its branches.

March 22, 1819, the first State bank was incorporated under the name and style of the "President, Directors and Company of the State Bank of Illinois,' The amount of capital was limited to five hundred thousand dollars, all of which was owned by the State, which through the Legislature was invested with its entire management and control. The president and directors were to be elected by the Senate and House of Representatives, on a joint ballot, and the cashiers appointed by a majority of the directors. The property, lands and faith of the State were pledged without any restrictions for the redemption of the bills issued, and the State was pledged, at or before the expiration of the ten years the time of its charter, to redeem all bills presented in gold or silver. The bills were declared legal tender for all debts due the State. The schoolfund and all specie, or "land-office money," were required to be deposited in the principal bank. Two thousand dollars was appropriated to procure plates and start the financial institution on its career of beneficence. Three hundred thousand dollars was to be put in circulation. It was to be distributed in the several districts in ratio with the population. The bills were to be loaned on notes, secured by mortgage, at the rate of

six per cent per annum. As the bills themselves bore an interest of two per cent per annum the borrower virtually paid but four per cent. for his money. No person was entitled to a loan of more than one thousand dollars. The officers of the bank were entitled for their services to banking accommodations, on approved security, at two per cent per annum, in the following amounts: President of the principal bank, \$2,000; the president of each branch, \$1,000; and each director, \$750. Four branches were established: At Edwardsville, Madison County; at Brownsville, Jackson County; at Shawneetown, Gallatin County; and at the

seat of justice in Edwards County.

The currency soon flooded the State and all gold and silver disappeared as a circulating medium, and as was quite natural, did not enter the vaults of the wild-cat bank or any of its branches. The money was scarcely in circulation before it depreciated to seventy cents on the dollar, then to fifty and so on down to twenty-five cents, when it disappeared from circulation and found its way into the hands of shrewd speculators who looked to its ultimate redemption by the State. There was subsequently a special law passed legalizing the payment of the officers of the State government in this depreciated paper at its current value. As under the terms of the charter all taxes and revenue of the State were payable in these bills, the State at last became hopelessly entangled in its own financial system and was forced to withdraw the circulation. This was begun in 1824, but the currency continued to circulate in the channels of the State receipts and disbursements until the expiration of the charter in 1831, when the State closed its banking business at a loss exceeding the full amount of the original issue. Governor Thomas Ford, in his History of Illinois, sums up the result as follows:

"In the course of ten years, it (the State) must have lost more than \$150,000 by receiving a depreciated currency, \$150,000 more by paying it out, and \$100,000 of the loans, which were never repaid by the borrowers, and which the State had to make good, by receiving the bills of the bank for taxes, by funding some at six per cent interest, and paying a part in cash, in the year 1831. In closing up the affairs of the bank the State borrowed of one Samuel Wiggins, January 29, 1831, the sum of \$100,000. It is stated by contemporary writers that the shrewd and provident Wiggins paid over a large part of the loan to the State in bills of the old State Bank which had been bought up by him at a low price and which the State now redeemed at par. The loan was at the time extremely unpopular, and threats of repudiation were rife for years afterward. It was however, paid ultimately, principal and interest, and the credit of the State saved from blemish."

For two or three years succeeding the closing up of the old State Bank no bank legislation was had. The citizens of the State were wholly engrossed in the Indian troubles which culminated in the Black Hawk War, so called. The treaties which followed its close opened up a vast domain for settlement, and, in 1834, the tide of emigration from the East set strongly through Chicago toward the region lying west and northwest, soon to be open for settlement. Many on reaching Chicago cut short their prospective tours and found their permanent home here, thus swelling the population and making a most thriving village, which even then gave promise of becoming the center of trade for the great crowds of prospectors which were passing through. Thus during the short space of two years Chicago grew from a small and unimportant hamlet, with little trade or commerce, to be an exceedingly busy center of trade. with a resident population, according to the State census taken in 1835, of three thousand two hundred and sixty-five inhabitants. All were filled with the intense desire to better their condition by availing themselves of the opportunities afforded in a new and rich country rapidly filling up with sturdy and thrifty settlers. Inspired with courage and hope adequate to the brilliant prospects offered, Chicago that year put on the armor of enterprise in which she has fought through flood, and fire, and war, and financial disaster, unflinchingly and with no backward step, to the proud position of the inland metropolis of the nation; a city, with its suburbs, of seven hundred and fifty thousand souls, as busy, as persistent, as sturdy, and with faith in its future yet beyond, as strong as appeared to the pioneer denizens of the little Chicago of fifty years ago.

It was not until 1835 that a banker could have found a paying business in Chicago. During that year began the great mania for land speculation which, from the pine forests of Maine swept the country to the prairies west of the great lakes. The purchase and sale of city lots in paper cities, and claims to vast tracts of land, at constantly enhancing prices, became the absorbing business of the times. The titles to the land in many cases was no less fictitious than the prices they realized; yet the immense volume of business transacted required a certain amount of money "to facilitate exchanges" if not sufficient to do a cash business, which at the time was not thought of. Chicago then felt for the first time in its history the sore need of money, and yearned for

a bank of issue.

ANOTHER STATE BANK .- Chastened into some slight degree of caution, but by no means disheartened by the outcome of the business of the old State Bank, the Legislature, February 12, 1835, in addition to extending the charter of the Shawneetown Bank, as before mentioned, incorporated another State bank. The Legislature did not, as before, take upon itself in behalf of the State the responsibility of managing the bank, nor did it assume the payment of its obliga-tions or the redemption of its bills in specie, either on demand or at any future period. With the wisdom which comes from experience it was content to leave the entire management of the bank to private enterprise. Following is a summary of the more important provisions of the charter. The title of the act was: Act to incorporate the subscribers to the bank of the State of Illinois;" the capital was to be \$1,500,000, divided into shares of one hundred dollars each; \$1,-400,000 to be subscribed by individuals, while \$100,000 should be reserved to be subscribed for by the State, whenever the Legislature might deem it proper to subscribe the whole or such parts thereof as the condition of the treasury might justify. It was further provided that the capital stock might be increased \$1,000,000 by individual subscriptions. The style of the corporate body was: "The President, Directors and Company of the State Bank of Illinois," and the corporation was to continue until January 1, 1860. The principal bank was to be located at Springfield, with branches, not to exceed six in number, to be located within the State at such points as the president and directors should deter-

The bank was forbidden to commence business until \$250,000 of the capital stock should have been paid in in specie: rates of interest on loans for sixty days or less, six per cent; on loans over six months and under twelve, eight per cent per annum.

The amount of bills or notes in circulation was

limited to twice and a half the amount of capital stock paid in and possessed, exclusive of the sum due on deposits; and its loans and discounts were never to exceed three times the amount of such stock, exclusive of the deposits aforesaid. Directors were declared liable in their natural and private capacity for any transgression of the above limits. The section concerning the redemption of bills read as follows:

"Section 25. If, at any time, the corporation hereby created, shall neglect or refuse, for ten days after demand, at the banking house, during the regular hours of business, to redeem, in specie, any evidence of debt issued by the said corporation, the said corporation shall discontinue and close all its operations of business except the securing and collecting of debts due or to become due to the said corporation, and the charter hereby granted shall be forfeited.

"SECTION 26. The said corporation shall be liable to pay to the holders of every evidence of debt made by it—the payment of which shall have been refused, damages for the non-payment thereof, in lieu of interest at and after the rate of ten per centum per annum, from the time of such refusal until the payment of such evidences of debt and the damages thereon."

It was further provided, that whenever the State should have subscribed for and paid the amount of \$100,000, for stock reserved for it, the Governor should nominate two directors to represent the interests of the State in the corporation. The issuing of bills of a less denomination than five dollars was forbidden under forfeiture of charter. The bank was to pay annually, on January 1, into the State treasury, one-half of one per cent on the amount of the capital stock actually paid in by individuals, in lieu of all taxes whatever. Interference on the part of the bank with the election of State officers forfeited the charter of the bank. Supplementary to this act, January 16, 1836, the bank was authorized to increase the number of its branches to nine; the time for redeeming its bills, without forfeiture of its charter, was extended from ten to fifty days. As a consideration for these favors the bank agreed to redeem what was known as the "Wiggins loan," together with what interest might thereafter accrue thereon. This, a part of the burden left by the old State Bank, became the heritage of its successor.

CHICAGO GETS HER FIRST BANK.—The citizens of Chicago immediately moved to secure the location of one of the branches of the State Bank in their town. Their efforts were successful, and the announcement was made as early as June, 1835, that a branch was to be established there. December 5, 1835, the officers of the "Chicago branch of the Illinois State Bank" were announced in the American as follows: Directors—John H. Kinzie, president; G. S. Hubbard, Peter Pruyue, E. K. Hubbard, R. J. Hamilton, Walter Kimball, H. B. Clarke, G. W. Dole, E. D. Taylor; Cashier, W. H.

Mr St. Brown.

Brown. The bank was open for business about the middle of December, in the four-story brick block then owned by Garrett, Brown & Bro, at the corner of La-Salle and South Water streets, and immediately started off with a flourishing business. The cushier advertised in the American, February 13, 1836, that the bank was to be kept open for business from 9 o'clock A.M., to 1 o'clock P. M., that "discount days" were Tuesdays and Fridays, and that all paper should be offered on Mondays and Thursdays. As an index of the magnitude of some of the accounts as well as the heavy business then

done by one of the leading firms it was stated in the American of March 12, 1836, that the Messrs. Garrett, Brown & Bro., from December 30, 1835, to February 27, 1836, deposited with the Chicago Branch Bank the sum of \$34,359.31. This was nearly an average of seven hundred dollars per day, and at that time was an item of news that reflected great credit upon the enterprising firm that did the immense business evinced by their huge deposits, as well as upon the solid financial institutions that could be trusted by them with such a fabulous amount.

Although the Chicago Branch was the only bank in the city at the beginning of 1836, the bills of the Illinois State Bank furnished but a small part of the currency in circulation. The value of the bills in circulation depended more on the facility with which they could be circulated than upon any knowledge as to their intrinsic worth. Anything that would go at the bank or that was not questioned on the street would do. The Shawneetown Bank, the Bank of Green Bay, working under charter from the Michigan Territorial Legislature and other banks, sufficiently remote for safety, helped to swell the volume of currency and buoy up the inflated

trade of the times.

l'hings went on swimmingly all through 1836 and until the spring of 1837. Then came the sudden crash in the East, a decline in values, a general suspension or failure of banks, and individual ruin on every hand. The far West was at first believed to be too remote to be drawn into the Eastern whirlpool of destruction. Its banks had no circulation in the Eastern States, and therefore were not subject to the sudden and overwhelming demand for redemption and liquidation which fell upon the Eastern banks without warning. The banks of Illinois and the speculation in Western lands seemed to have little in common with the speculative craze in the far East, except that it was a psychological development of the same mental disorder. It was reasoned that with her own money and her own lands, and her own prices, Illinois might float securely in her own tub. Forthwith the wise men set about fortifying for the coming storm. The bank was, of course, the palladium of safety. It was determined to have money of home manufacture in sufficient quantity to keep the Illinois tub afloat. In the summer and fall of 1836, in connection with the great speculative excitement then near its culminating point, a great system of public improvements began to be discussed. It embraced the stupendous work of pledging the public credit to such an amount as might complete a water way from Chicago to the Mississippi River, and cover the whole State with a system of railroads that would reach nearly every prominent paper city which had been laid out, and which only needed railroad facilities to make them habitable as well as inhabited. The necessity of a population in order to keep up prices, began to dawn upon the people of Illinois almost simultaneously, with the determination to create through the banks an ample supply of money. The two ideas seemed to have a correlative fitness to together raise the State to the highest point of prosperity at once. The building of the railroads and the canal and the improvement of the river navigation, would open up the country to immediate and rapid settlement, and the highest hopes of the wildest speculators thus find fruition. Public meetings were held in most of the towns, where the plan was discussed and resolutions favoring the project passed, and, from most of the counties, delegates appointed to attend an Internal Improvement convention, to be held at the capital. The convention assembled at the same time as did the Legis-

lature of 1836-37, and recommended to that body a system of internal improvements, whtch, as stated in the resolutions, "should be commensurate with the wants of the people." The scheme was without doubt, worked up to this point, by a few shrewd designing men for purposes not entirely patriotic or unselfish, but when presented, it was most eagerly adopted by the Legis. lature. The building of the proposed railways, and the improvements of navigable streams, allayed the bitter opposition which had developed in sections of the State too remote from the Illinois & Michigan Canal to be benefited by the project, and the canal section could well afford to support the general scheme, however visionary, if thereby could be secured further appropriations for the continuance of the work. The banking interest could but approve of a plan that would make the banks the fiscal agents of the State in the carrying out of the scheme; the people saw in it a flood of money, sudden wealth without toil, and a continuance of good times, and Illinois, basking in the sun of prosperity, the haven of rest to which the pauperized inhabitants of less favored States would flock for homes, in numbers sufficient to occupy the whole domain and ever after remain the richest, the most populous and the most powerful of all the States. There were conservatives who saw the danger, warned the people and opposed the plan as inopportune, visionary, dangerous to the credit of the State and ruinous to its people; but all their efforts to stem the popular tide of enthusiasm for the project proved futile.

On February 27, 1837, the great scheme of internal improvements was legally inaugurated in the Legislature, by the passage of a bill, the provision of which, if carried out, would have met the wishes and expectations of the wildest enthusiast of those visionary times.

The act created a Board of Fund Commissioners, consisting of three members, who were to be "practical and experienced financiers;" and also a Board of Commissioners of Public Works, consisting of seven members. The members of those two executive boards were to be appointed by the General Assembly, and to hold their offices for two years. The Commissioners were authorized and required to complete, "within a reasonable time certain public works, and for which appropriations were made as follows:

For the improvement of the navigation of the
Great Wabash\$100,000
The Illinois River 100,000
The Rock River 100,000
The Kaskaskia Kiver 50,000
The Little Wabash 50,000
Total
For the building of railroads: The Great Western Railroad from Vincennes to
St. Louis\$ 250,000
A railroad from the city of Cairo, at or near the
confluence of the Ohio and Mississippi
rivers, via Vandalia, Shelbyville and De-
catur, and Bloomington to the southern ter-
mination of the Illinois & Michigan Canal,
and from thence by way of Savannah to
Galena 3,500,000
A southern cross railroad, from Alton to Mount
Carmel, via Edwardsville, Carlyle, Salem,
Fairfield and Albion; and also a railroad
from Alton to Shawneetown 1,600,000
A northern cross railroad, from Quincy to Spring-

Total appropriated for railroad building .. \$9,650,000

There was a further appropriation of \$200,000, to counties which neither of the proposed railroads nor the canal would pass, "for the improvements of roads and bridges," the said amount to be paid to the counties designated, "from the first money that should be obtained under the provisions of this act." This appropriation was little less than a legislative bribe to the few counties that otherwise, seeing themselves shut out from the distribution of benefits, might have jeopardized the passage of the bill by their opposition. The total amount appropriated was \$10,250,000; and the total length of roads contemplated was 1,341 miles.

The fund constituted for the work proposed was to consist: 1. Of money to be borrowed. 2. All appropriations which should be made from time to time out of the State revenues, arising from lands and taxes. 3. All moneys to be received from tolls, etc. 4. All rents, issues, and profits arising from lands to be purchased by the State. 5. The proceeds of all lands which might be donated by the General Government in aid of the undertaking. 6. All grants and donations from individuals. 7. All profits and interest which may accrue from said works, together with the balance (after paying the debt due to the school, college, and seminary fund) to be received under the distribution law of Congress, which amount of said deposit, so funded, was "to be charged to the said fund of internal improvements, and repaid out of the same when demanded by the General Government." 8. All net profits, to arise from bank and other stocks thereafter to be subscribed for, or owned by the State, after liquidating the interest on loans contracted by the purchase of such bank or other stock.\* The passage of the bill of which the foregoing is a digest involved the necessity of enlarged banking facilities in the State,indeed the bolstering up of the banks, or rather their absorption by the State was but a part of the scheme to be worked in a co-operative way to the attainment of the same end. The banks were to receive a large amount of the bonds of the State in payment for stock to be subscribed for and would, at the same time, become the fiscal agents of the State for the receipt and disbursement of the vast sums involved in the prosecution of the work. Accordingly March 4, 1837, an act was passed increasing the capital stock of the Shawneetown Bank \$1,400,000, all of which with the consent of the bank was to be subscribed by the State; also, during the same session, an act increasing the capital of the State Bank \$2,000,000, which increased stock was likewise to be taken by the State. To pay for the stock subscribed for, the Fund Commissioners were authorized to subscribe for the amount, payment for which was to be made, a part from the State's dividend of the surplus revenues of the United States, and the remainder from the sale of State bonds. The total amount of the capital stock of the two Illinois banks after the increase was: Shawneetown Bank, \$1,700,000; State Bank, \$3,100,000. Of these amounts the stock was owned as follows: Of the Shawneetown Bank, \$200,-000 by private individuals and \$1,500,000 by the State;

For a further history of the scheme up to the time of its utter failure and abandonment, see article on Railroads.

of the State Bank \$1,000,000 by individual stockholders, and \$2,100,000 by the State. Governor Ford\* gives the following account of the manner in which these banks were started in their enlarged sphere of usefulness by the State:

"Although the State was to have the majority of stock in both banks, yet were the private stockholders to have a majority of the directors. The banks were made the fiscal agents of the canal and railroad funds; and, upon the whole, it is a mere chance that the State did not lose its entire capital thus invested. It was supposed that the State bonds would sell for a premium of about ten per cent, which would go to swell the interest fund; and that the dividends upon stock would not only pay the interest on the bonds, but furnish a large surplus to be carried, likewise to the interest fund. However, when these bonds were offered in market. they could not be sold even at par. The banks were accommodating, and rather than the speculation should fail, they agreed to take the bonds at par, as cash, amounting to \$2,665,000. The Bank of Illinois Shawneetown) sold their lot of \$900,000, but the \$1,765,000 in bonds disposed of to the State Bank, it is alleged, were never sold. They were, however, used as bank capital, and the bank expanded its business accordingly.'

It will be seen by the above that in the onset the banks were obliged to come forward and sustain the credit of the State by taking its bonds at par, which was above the market value, and in the case of the State Bank, in so far as it extended its business upon the basis of the sold or unsaleable State bonds, it was doing it on dead capital and running the imminent risk of failure. It did not take long to show the fallacy of the system. In the spring of 1837 the speculative bubble burst, prices collapsed, and the banks of the whole country suspended specie payment. It became at once apparent that the State Bank must suspend with the other banks of the country or fail. It had already become crippled by many failures among its speculative customers, to whom it had loaned money, and had still further weakened its position by extending its business largely on the unavailable capital of Illinois bonds. Being, as it was, one of the fiscal agents for both the canal and railroads, and indebted to both these funds to a large amount, its failure would have involved in ruin the whole system of public improvements. To avert the threatened calamity, a special session of the Legislature was called in July. Of this session, Governor Ford, in his history, says:

"The Governor's message made a statement of the matter, without any direct recommendation to legalize the suspension, and did recommend a repeal or modification of the internal improvement system. The Legislature did legalize the suspension of specie payments, but refused to touch the subject of internal improvements. It was plain that nothing could be done to arrest the evil for nearly two years more.

The act passed, legalizing suspension, was general in its nature, and was as follows:

An Act to suspend, for a limited time, certain Laws in relation to the Banks of this State.

SECTION I. Be it enacted by the people of the State of Illinois, represented in the General Assembly. - That every provision of law, requiring or authorizing proceedings against any bank in this State, with a view to forfeit its charter or wind up its concerns, or which requires said bank to suspend its operations and proceedings, in consequence of its refusal to pay its notes or evidences of debt in specie, is hereby suspended until the end of next general or special session of the General Assembly, unless banks shall have generally resumed specie payment at an earlier date, in which case

\* "History of Illinois, " pp. 90-91,

the Governor shall give notice thereof by proclamation, and the said bank shall, within twenty days thereafter, also, resume specie payments: Provided, however, That to secure the benefit of the foregoing provision, said banks shall agree to conform to, and comply with, the following conditions, restrictions and limitations,

First-That it will not, either directly or indirectly, divide or pay among its stockholders, or to any person for them, any dividends, interest, or profits whatever, until it shall bona fide resume the payment of its notes and evidences of debt in specie, which dividends shall be retained in bank as an additional security to the holders of its notes.

Second - That it will not, directly or indirectly, during the suspension of specie payment, sell, dispose of, or part with any of its specie, or gold or silver bullion, except for the purpose of change to the amount of five dollars, or under the sum of five

Third — That it will furnish monthly, upon the oath of its president or cashier, to the Executive of the State, a full and complete statement of the condition and financial operations of said bank and branches, which shall be published in the newspapers of the State Printer.

Fourth-That it will not, directly or indirectly, issue or put in circulation, during the period of its suspension of specie payments, any bank bills or notes, or any evidence of debt by which the amount of its circulation shall be increased beyond the amount of capital stock paid in by the stockholders.

Fifth - That it will receive upon deposit any funds belonging to the State, which may be required to be so deposited, and pay the same out upon the order of the proper officer, or agent of the State, in kind, free from charge; and also all funds heretofore

deposited by the State.
Sixth — That until the banks shall resume specie payment, citizens and residents of the State who are indebted to them upon notes heretofore discounted, shall be allowed to pay their debts in installments, at the rate of ten per cent, upon each and every renewal of the amount originally due, upon condition that such debtors shall execute new notes, with satisfactory security and pay the aforesaid per cent, and the interest in advance, according to the usage and custom of banking: Provided, That this section shall not apply to notes or bonds assigned or endorsed to the bank.

Seventh — That any violation of the provisions of this act, or

any failure to comply with and conform to the same, shall subject

the bank in default to a forfeiture of its charter.

SEC. 2. Whenever any bank shall accept the provisions of this act, and the president thereof shall furnish the Governor with a certificate of the fact of such acceptance, under their corporate seal, the Governor shall issue a proclamation, stating the fact of such acceptance; and from and after the date of such proclamation such bank shall be considered as being entitled to all the benefits hereby conferred, and bound by all the conditions, restrictions and limitations herein contained.

SEC. 3. This act shall not be construed so as to impair any rights required by individuals, or to exonerate the bank from any liability to the holders of its notes, for the non-payment of the same; and the provisions of this section shall apply as well to notes heretofore issued as to notes which may hereafter be issued.

Approved 21st July, 1837.

The State Bank, under the provisions of the act, continued to do business as the fiscal agent of the State, although it never again redeemed its obligations in specie. So long as the fund commissioners could dispose of the State bonds in sufficient amounts to continue the internal improvements it had a fair although somewhat soiled reputation as a monetary institution. The work was continued until near the close of 1838, when the fund commissioners had exhausted every means their ingenuity could devise for raising money on State bonds to continue the work, and were compelled to report an empty treasury, their inability to replenish it by the sale of more bonds, and the consequent necessity of suspending the work. An extra session of the Legislature was called, and the bubble was as legally burst as it had been legally inflated by the passage of an act in 1839 which repealed the system and provided for winding it up.

The indebtedness incurred by the State in this illstarred enterprise amounted to \$6,014,749.53, for which she had to show only one small section of railroad com-

pleted from Springfield to Meredosia' and a network of unfinished roads spread across the State in all directions which, thus left uncompleted, soon became nearly worthless. The credit of the State had become so impaired that its bonds had no staple or quotable value, and were bandied about in the money markets of New York and London at prices varying from fifty to seventy-five per cent below par. The credit of the banks which had been so closely identified with the State improvement scheme, and whose only valid claim to solvency rested on the credit of the State, it being the owner of a great majority of the stock in both banks. sank even below the credit of the State. Their stocks were worth in the neighborhood of fifty cents on the dollar, and, at that quotation, the banks could not redeem their own bills. As banks of issue their mission was at an end in 1839. The State Bank, however, continued to perform some of the functions of banking, such as dealing in exchange, and disbursing the canal fund, for a few years thereafter. The end came during the winter of 1843. The Legislature at that time had come to a realizing sense of the situation, and determined to retire from the banking business by forcing into liquidation the banks it virtually owned. On January 24 an act was passed "to diminish the State debt, and put the State Bank into liquidation," and on February 25 an act "to diminish the State debt one million dollars, and put the Bank of Illinois (Shawneetown) into liquidation."

The "diminishing the State debt" was to be brought about by forcing the banks to surrender up to the Governor State bonds, scrip, or other evidences of State indebtedness-the Shawneetown Bank \$1,000,000, and the State Bank \$2,050,000-for which a like amount of the stock held in either bank was to be surrendered by the State. As the securities sought to be exchanged were at the time about on par, each with the other, it might be deemed that the exchange contemplated was no robbery. It was, however, an arbitrary and unjust act to thus force the banks to deliver up its securities for its stock, and leave the burden of the past losses of the bank upon the individual stockholders who had paid good money for their stock, now worthless, instead of giving their notes, still unpaid, as the State had done. The scheme worked, nevertheless; the bonds to the amount of \$3,050,000 were delivered up, the State indebtedness thus reduced, and the banks finally wound up at the expense of the individual stockholders, the holders of their bills, and their other creditors, who realized but little out of the final settlement.\*

Thus the Chicago Branch of the State Bank went out in 1843. Its demise was not generally regretted by the citizens. It had not proved the unmixed blessing anticipated by those who had been instrumental in its establishment seven years before. For nine years after the close of the State banks there was no attempt to establish any system of State banking in Illinois. During that period the business was done entirely by private bankers, and on the currency of other State banks or on other issues not authorized by the laws of the State to be used as money.

From 1836 to 1843, during which time a branch of the State Bank of Illinois was located in Chicago, the young city nearly doubled its population. The enum-

<sup>\*</sup>In justification of this arbitrary procedure on part of the Legislature it was claimed that the bonds thus demanded were not the identical bonds which had been received by the banks; that the bonds had been sold at par, and repurchased at a great discount, and that the banks had made money by the operation.

† In the nominal compliance with an act of the Legislature passed Janu ary 31, 180, the branch was removed to Lockport, but its business, through an "agency," still went on in Chicago.

eration of 1837 gave a population of four thousand one hundred and seventy-nine; that of 1843, seven thousand five hundred and eighty. The growth was not entirely attributable to the bank; on the contrary that institution proved quite inadequate to furnish the banking facilities to meet the legitimate requirements of the fast growing town, and, after the first year was little better than a stumbling block in the way of progress. Outside its own immediate circle of friends, it could grant but little banking accommodation. Its discredited currency had driven all silver coin out of circulation, and in its place the citizens were forced to use anything that would enable them to carry on the business of the city. Canal scrip was used, payable at the "Chicago Branch," some bearing interest, some payable on demand, and issued on engraved paper in the semblance of bank notes, in denominations of \$1, \$2, \$2.50, \$3 and \$5. The city corporations, having been refused a discount at the

people in the personal responsibility, ability and honesty of those who had promised to redeem it.

ILLEGAL BANKING.—The Legislature of 1836-37 chartered the Chicago Marine & Fire Insurance Company. In the charter it was specifically forbidden that the company should do a banking business, or issue any notes or bills in the semblance of bank notes to be passed as money. The company organized under their charter and one of their earliest advertisements, which appeared in the American, May 16, 1837, read as follows:

The Directors of the Chicago Marine & Fire Insurance Company, being desirous of rendering to the community, during the existing deranged condition of the monetary system of the country, every legitimate aid sanctioned by prudence which the provisions of the charter of the company admit, when there are so many pressing causes urging to action every power capable of affording relief, have determined to avail themselves of that portion of the 5th section which is contained in the clause following:

FAC-SIMILE OF PLATE ENGRAVED BY THE CHICAGO MARINE AND FIRE INSURANCE COMPANY, BUT NOT ISSUED IN ANY LARGE AMOUNTS.

bank and being unable to obtain a loan elsewhere, issued scrip also, in small denominations. The small tradesmen issued tickets of credit for change, from five cents to 50 cents, "good for groceries," "payable in goods," "good for tobacco," "good for a drink," or good for anything else which the issuer might happen to deal in. In addition to this was county scrip, State-Auditor's scrip, St. Louis scrip, and subsequent to 1837, a flood of bills issued by Michigan banks under the Land Loan banking law of that State. Of all this variety not a bill could be found that would be taken for postage, or for lands by the General Government, and, when found necessary to convert any of them into gold or silver, it was done at a frightful discount, varying from ten to eighty per cent, according to the character of the paper offered, and the whims, avarice, or necessities of the parties to the trade. All the bank bills might be termed legal issues, as the banks were all working under franchises granted them by some State or Territory. During this period, 1837-43, besides these, there came into general use as money, an issue of certificates of indebtedness which in contrast might be distinguished as illegal money; since its issue was not authorized under the laws of any State, and its current value as money was based entirely on the confidence of the

"And also to receive moneys on deposit, and to loan the same, on bottomry, and respondentia, or otherwise, at such rates of interest as may now be done by the existing laws of the State." \* \* \*

The condition of the company is entirely solid and beyond doubt, as there is a surplus, beyond its capital stock paid in, of a considerable amount and because it has met with no loss since its organization, and its present risks are very few and limited to small amounts.

The Articles of the By-Laws, in relation to deposits are:

(I) All deposits shall be either general or special.

(2) General deposits are those which shall be made by the depositor, subject to be drawn out at any time on his check or order.

(3) Special deposits shall be those which are made for any specific time, and for which the depositor shall receive an interest.
(4) No sum of money less than ten dollars shall be received on a general deposit, nor less than five dollars on special deposit.

(5) All money deposited specially on trust for a shorter term than one year shall be deposited for a certified number of months—not less in any case than three months from date of deposit.

(6) The rate of interest to be allowed on such special deposits of not less than six months shall be at the rate of six per cent per annum; in all other cases the rate shall be settled by special agreement between the depositor and the officer of the institution at the time of depositing.

(7) When the time of deposit shall exceed a year, interest

(7) When the time of deposit shall exceed a year, interest may be made payable before the principal becomes due, annually or semi-annually, as may be agreed on; but when the deposit shall be for a shorter time than a year, no interest will be paid until the

principal becomes due.

(8) Certificates of deposit, for money deposited, whether general or special, specifying the time and amount of the deposit, and when payable, and in what fund, and whether with or without interest, shall be issued when required, and in such cases the money so received shall be payable according to the terms of the certifi-cate, on the production and surrender of such certificate.

Office in Russell's Brick Block, corner of Lake and Clark

streets.

ets. Office hours, from 9 A M. to 1 P. M. J. S. Breese, *President*.

L. D. BOONE, Secretary.

In accordance with the above notice, the company immediately commenced a "banking business." received deposits, it loaned money, it bought and sold exchange and coin, and its demand certificates of deposit in the course of business, performed the functions of money, although they were not in the semblance of "bank notes," and it would have been impossible to prove that they had been issued in violation of the provisions of the charter. What circulation they had was based on the confidence of the people in the solvency of the institution, rather than on any authority or power conferred on it by State legislation. does not appear that the directors of this company designed to create a circulating medium in their certificates, nor did they do so to any great extent, but, perhaps, sufficiently to suggest the feasibility of the plan to a class of men having the ability to put it in practice successfully, and to such an extent as to render it the leading monetary system, and a prominent factor in the trade and commerce of the Northwest for many years.

Among the shrewdest financiers then living in Chicago were George Smith and Messrs. Strachan & Scott, all from Scotland. Smith\* first came to Chicago as a prospector in 1834. He became strongly impressed with the immense field for profitable investment of money offered by the great Northwest, then for the first time open for settlement, and returned to Scotland full of enthusiasm over the glorious business prospects which his sagacity enabled him to discern. He there organized the "Scottish Illinois Land Investment Company;" Strachan & Scott came out with him, on his return, as managers of the affairs of the company; George Smith was a large stockholder, and a sort of advisory director, and did his business at their office which they opened as agents of the Scotch company, real estate agents, and private bankers, immediately after their arrival (late in 1836). The three were comfortably settled and doing business in August, 1837, as appears by the following advertisement which appeared in the Democrat of August 16:

"TO RENT.

"Several houses and rooms suitable for families. Apply to Strachan & Scott, corner of Lake and Wells streets, or to George Smith, Lake House."

In Smith

These Scotch gentlemen, whose business in the country was to make money, watched with intense interest the developments of the new phase of banking

which had its basis outside of any legislative authority. The act gave the company a corporate existence, and empowered it to hold property, to buy and sell, to sue and be sued, which seemed to them all that was necessary for their purposes. Accordingly, in 1839, the times having become propitious through the collapse of the State internal improvement scheme, and the abridged importance and prominence of the State banks, which followed, they took a transcript of the charter of the Chicago Marine & Fire Insurance Company, and without important changes obtained from the Territorial Legislature of Wisconsin, its passage as an act incorporating the Wisconsin Marine & Fire Insurance Company. Another Scotchman now joined the trio. Alexander Mitchell, a young banker from Aberdeen, came out at the solicitation of his friend, George Smith, to assume the secretaryship and local management of the new company at Milwaukee. The stock of the company was \$225,000, one-half of which was held in Scotland, and the other half by George Smith, Alexander Mitchell, and Strachan & Scott. The office was established at Milwaukee. The sign read: "Wisconsin Fire & Marine Insurance Company." The proprietors immediately commenced the business for which they had obtained the charter, leaving the people to judge as to whether they were doing a banking business or not. To their customers they issued certificates of deposit, engraved like bank bills, of various denominations from one dollar to ten dollars. Below is a copy of one of the few, if not the only original certificate issued by the company, now in existence:

WISCONSIN MARINE & FIRE INSURANCE COMPANY.
No. 113,897.
This is to certify that E. I. Tinkham has deposited in this institution one dollar, which will be paid on demand to bearer.
Milwaukee, W. T., 11th July, 1845.
GEORGE SMITH, President.

ALEXANDER MITCHELL, Secretary.

These certificates were redeemed in Chicago at the banking house of Strachan & Scott, until their removal to New York in 1840, and subsequently by George Smith & Co., so long as they continued in circulation. The issue worked its way into circulation slowly at first, and against the opposition of the banks still doing business under State charters. From the first appearance of these bills until the State banks, under the old regime, were powerless and useless, they were subject to their bitter hostility. The people, however, favored them, as they were always promptly paid on presentation and showed in favorable contrast with the Illinois bills afloat, all of which were below par, and none of which were ever redeemed at their face value after the Wisconsin Fire & Marine Insurance Company started business, December 1, 1841, the company had out of its certificates of deposit (afloat as currency) only \$34,028. The issue from that time rapidly increased. In 1843 the circulation was \$100,000; in November, 1845, \$250,000; in July, 1847, \$300,000; in November, 1847, \$400,000; in November, 1848, \$600,000; in October, 1849, over \$1,000,000; in December, 1851 (the year before the banking law was passed in Wisconsin), \$1,470,000. From that point the circulation was gradually contracted. Every dollar of this vast amount was paid according to its tenor, on presentation. Nearly \$34,000 was never presented, that amount being probably lost by fire, shipwreck and wear. In 1853 the company was re-organized as a legal banking institution under the general banking law of Wisconsin, its name, already too long, being lengthened by the important word, Bank, to which it had an unquestionable title by an illegal but

<sup>\*</sup> George Smith was a native of Old Deer, Aberdeenshire, Scotland, where he was born about the year 1809. He was bred a farmer, spent two years at Aberdeen Chivership and came to America and the great West, not to establish a banking business but to become a great land-holder on the vast unoccupied domain of the new country. It seems a matter of chance or accident that the business in which he engaged made him the great banker of the West instead the owner and cultivator of immense tracts of land. His connection with Strachan & Scott, and Alexander Mitchell, shrewd and educated hankers, had undoubtedly much to do with changing the character of his business, and turning it into the unexpected channel it afterward followed.

honorable career in the banking business for thirteen years. It received its legal christening under the name of "The Wisconsin Marine & Fire Insurance Company Bank," and as such is known to this day. The name was, and is, too long for practical adoption. In its early days it was more generally dubbed Smith's Bank, or Mitchell's Bank, and under the latter name, after half a century, stands with unlimited credit in all the marts of the world.

As has been stated, the issues of the bank were slow in gaining the confidence of the people. The irregular and illegal form in which the currency was put out was kept constantly in the mind of the people by those who were interested in perpetuating what they were pleased to term legal banking. Runs on Strachan & Scott and Smith, and on the bank of Milwaukee, were organized with a view to discredit the currency, and destroy the growing confidence in its stability and value. None of them succeeded further than to create temporay panic outside the bank; on the contrary, each run, either on the bank at Milwaukee or on Smith at Chicago, or on any other agents for the redemption of its bills, was promptly met, and left the bank in better standing than it was before. As its business increased, in order to enlarge the field of its circulation, it established agencies for the redemption of its bills at Galena, St. Louis, Cincinnati and Detroit. The result was that the illegal bills, issued honestly and honestly paid, drove from circulation the legal bills, dishonestly issued and afterward dishonored. A few banks stood the stern Scotch test, and kept their bills in circulation; but it is but truth to say that the illegal issue of the Wisconsin Fire & Marine Insurance Company drove the depreciated paper of the legally constituted State banks out of circulation.

As contrasting the two systems of banking then in vogue the Milwaukee Courier, May 9, 1842, published the following statements, with comments, as follows:

## BANKING.

Statement of the Wisconsin Marine & Fire Insurance Company, December 1, 1841:

#### ASSETS.

ASSETS,
Bills and notes, chiefly at or under 60 and 90 days' date, not due and bearing interest\$ 8,439.00

The last exhibit showing the condition of the State Bank of Illinois, is the work of prejudice. The estimates of the value of securities, although, in the aggregate, not far from the truth, were made at the time with a view to discrediting the bank. The reader will remember that, as has been told, the State soon after closed up the bank and robbed it of its State stock, leaving it unable to pay its other creditors. On the part of the members of the Legislature who forced the bank to close up, it was a shameless repudiation, since many of them were debtors to the bank, and it was openly charged that the ruling motive for closing it up was to thus avoid the payment of their honest debts.

The only object of the foregoing exhibit is to show the reader how the illegal system of banking honestly conducted, compared with legal banking dishonestly carried on. A State may be dishonest as well as an individual, and lacking the control coming from fear of punishment, do more mischief than the citizen who has a wholesome fear of the penalties of the law before his eyes. It is sufficient to say that in 1843 legal banking ceased in Illinois, and that illegal banking had, meantime established itself. For the succeeding eight years, the banking of Chicago was carried on by private bankers or banks, using as currency the bills of

Wisconsin Marine & Fire Insurance Company, and the bills of other State banks which had managed to resume specie payment and sustain their credit against the first-named institution.

EARLY BANKS AND BANKERS-(1836 to 1851) .-The banking of Chicago was carried on prior to 1851, by the following corporations, firms and individuals:

1836-Chicago Branch of the State Bank of Illinois, corner of LaSalle and Water streets, removed to Lockport in 1840; agency remained in Chicago until bank closed in 1843.

1837-Strachan & Scott; remained in business until 1840; sold out private banking business to Murray & Brand. George Smith succeeded them as agents of the Wisconsin Marine & Fire Insurance Company. The Chicago Marine & Fire Insurance Company did a full

Marmung Jeong

banking business with the exception of issuing bills. Its charter was amended in 1849, and it was the predecessor of the Marine Company of Chicago.

1838-No changes.

1840-George Smith & Co., LaSalle Street, bankers, continued in business in Chicago until 1856-57, at which time the business of the house was closed up. Mr. Smith after an honorable and successful career of twenty

Alex: Brand

years as a Western banker, retired with a very large fortune, and returned to Scotland. He now lives in London. He has still large property interests in Chicago.

The first full and reliable business directory published in Chicago was issued by Norris in 1844. It contained the following names of persons engaged in

banking and brokerage:

Murray & Brand, exchange brokers, corner of Lake and Clark streets; Noah Buckley, pawnbroker, corner of Randolph and Wells streets; Newberry (Walter L.) & Burch I. H., bankers, 97 Lake Street; Griffin & Vincent, brokers, corner of Dearborn and State streets; George Smith & Co., private bankers, and exchange brokers, Bank Building, LaSalle Street; Elijah Swift, broker, 102 Lake Street; R. K. Swift, broker, 102 Lake Street; H. W. Wells, agent of Farmer's and Mechanic's Bank, 112 Lake Street, upstairs.

The directory of 1845 shows no additions to the banking facilities of the city. The names and advertisements of banks and bankers were as follows:

Mexander Brand & Co. Murray & Brand), private bankers and exchange brokers, 127 Lake and Clark Street. "Collections and remittances made on all parts of the United States, Great Britain and Ireland, and the Continent of Europe. Money remitted to or from settlers or emigrants in sums as may be required. Deposit accounts kept. Interest paid on special deposits. Money and property commissions attended to," J. Coe Clarke, north of Lake Street, between Clarke and South Water streets; Newberry & Burch, 97 Lake Street; George Smith & Co., bankers and exchange brokers, Clark Street, between Lake and Randolph; R. K. Swift, office 102 Lake Street, upstairs; "money loaned on real estate and other undoubted securities;" Agency of the Farmer's and Mechanic's Bank of Michigan, H. W. Wells, agent, office Saloon Building, Clark Street. Agency of the Mississippi Marine & Fire Insurance Company, office 87 Lake Street, M. M. Hayden, vicepresident.

The directory of 1849-50 has the following: Money Lenders—G. P. Baker, 193 Lake Street; J. S. Dole, 181 Lake Street; Thomas Parker, 40 Clark Street; E. G. Hall, 103 Lake Street; R. K. Swift, 111 Lake Street.

Banks, bankers, and dealers in exchange—Alexander Brand & Co., 127 Lake Street; I. H. Burch, 125 Lake Street; Chicago Savings Bank,\* 125 Lake Street; Chicago Bank,\* 125 Lake Street; Curtis & Tinkham, 40 Clark Street; D. C. Eddy, 97 Lake Street; George Smith & Co., 41 and 43 Clark Street.

In 1851 a general banking law was passed by the State Legislature and legal banks of issue incorporated under its provisions, ultimately superseded the private banking which had been carried on since 1843. Many of the private bankers organized banks, and continued their business under new corporate names. The survivors of the period of illegal banking as shown in the directory of 1851 were:

Bankers-Alexander Brand & Co., 127 Lake Street, corner of Clark; I. H. Burch, 125 Lake (Chicago Bank, also Chicago Savings Bank); George Smith & Co., 41 and 43 Clark Street; Tucker, Bronson & Co., 85 Clark Street; Jones (William) & Patrick (Milton S.) 40 Clark

Street; Richard K. Swift, 45 Clark Street.

Money Lenders-John Denniston, 111 Lake Street;

E. G. Hall, 103 Lake Street.

The directory also shows that, in that year, Charles B. Farwell was teller at George Smith's Bank, and that Edward 1. Tinkham was secretary of the Chicago Marine & Fire Insurance Company.

The "illegal banks" and bankers that lived through the period, and continued after the passage of the Banking Law, in 1851, to do business had shown a vitality not to be despised. "Smith's Bank" (The Wisconsin Marine & Fire Insurance Company) was in constant danger, and attacks on its credit were so persistent that it may be said to have been in a constant state of siege from the time its bills first appeared in 1839, until it finally became a legal banking institution, under the banking law of Wisconsin, in 1853.

As early as 1841, before the collapse of the State Bank of Illinois, the following appeared in the Chicago American of September 28, 1841: "The present circulation of the Wisconsin Marine & Fire Insurance Company, whether in Illinois or elsewhere, is \$29,000. In addition to the guarantee afforded by stockholders, both here and in Great Britain, we are cnabled to communicate the facts, that the parties by whom the bills of the institution are redeemed in the city have never been without the means of taking up its whole circulation at a moment's notice, either in Illinois funds or Eastern exchange, and have at this time, deposits, available for the redemption of the bills, in the Chicago Branch Bank, to an amount exceeding the entire circulation.

A statement like the above silenced the Illinois Bank men for the time being, as a run on Smith's Bank would be virtually a run on their own bank, the deposits for the redemption of the bills being kept in that institution. But when, in 1843, the State Bank was closed up, the war was carried on by all the outside banks of issue whose circulation came in competition. The most formidable attempt to ruin the bank occurred in Novem-

\* Owned by I. H. Burch.

ber, 1839. For weeks before, the Michigan banks, with allies in Chicago, had been employing brokers to gather "Smith's bills," of which there were out at the time \$1,000,000. On Thanksgiving day Smith closed his bank in Chicago for the holiday as was customary. The news was immediately sent to Milwaukee that "Smith had closed his bank in Chicago," and a local panic was thus inaugurated. Simultaneously the accumulated bills began to pour in for redemption, both in Milwaukee and Chicago. Mr. Mitchell, secretary at Milwaukee, immediately sent an express to Chicago for a supply of specie, which was promptly forwarded in double the amount required, one-half by land express and the other by way of the lake. In the History of Milwaukee, published in 1881, the run on the bank and its result is thus stated: "There was much excitement and large crowds of panic-stricken depositors thronged the bank and withdrew their deposits. The more intelligent classes, however, proved their stanch friendship and supreme confidence in Mr. Mitchell and his bank, by furnishing him all they could rake together at first, and afterward replenishing his coffers by depositing with him such amounts as had been placed in his hands for safekeeping. Thus the run became nearly self-supporting, and, as the supply of coin seemed inexhaustible, the local panic among small depositors had entirely subsided before the arrival of the coin from Chicago, the deposits being actually decreased at the end of the run only about \$100,000.'

Mr. Smith promptly redeemed the bills presented in Chicago. The plot failed and left the bank ultimately stronger in the confidence of the public than ever

before.

The panic, however, was not confined to Milwaukee and Chicago, where it was short lived, but spread all through the West where the bills were current and constituted the greater part of the circulating medium.

Concerning the panic and the bank, the Chicago Democrat, December 1, 1849, discoursed thus: "Wisconsin Marine & Fire Insurance Company-Panic-Some considerable excitement has been created within the past few weeks with regard to this institution; and on account of articles published in the papers of this city, many of the holders of its bills abroad have been alarmed. In St. Louis the excitement was intense and its bills were selling at five to six per cent discount. They were, however, redeemed at the company agency, at one per cent discount—the usual rate. Upon the line of the canal, also, we learn that the bills have been selling at eight per cent discount." After alluding to its hatred of banking and broken banks it continued: "We do not wonder that they the failures of the banks) should cause the people to enquire whether the owners of the institution are legally responsible for its liabilities. In this state of things, we agree with our contemporaries of the Press that it is due to the public on the part of its proprietor that the Wisconsin Marine & Fire Insurance Company should make such arrangements as will prevent these panics in the future. Mr. Smith is now in a position in which he can make such a disposition of the property which he possesses, or securities that he can command, as will amply secure the public, so far as a bank can be said to be secure. We should think that a regard alone of his own interest would lead to this. Such security would restore confidence, and give his institution a stability which it can never possess under its present character. Mr. Smith has been made a wealthy man by the people of this city. Why then withhold legal responsibility which should long ago have

been given, but without which the public have been so generous as to put confidence in the institution?

As showing that both Mr. Smith and Mr. Mitchell were not unmindful of the demands the public had upon them in return for the confidence it had shown in their institutions, the following appeared in the Democrat of December 7, 1849.

"Wisconsin Marine & Fire Insurance Company and George Smith. We copy the following from Thompson's Bank Note Reporter of December 1, just received:

"Wisconsin Marine & Fire Insurance Company,
"Milwaukee, November 22, 1849.

"J. THOMPSON, Esq., - Dear Sir: In the Bank Note Reporter of the 15th current I observe reference is made to this institution in of the 15th current 1 observe reference is made to this institution in a communication in which you append certain remarks of your own and inquire whether the public have a legal claim on me for the redemption of its notes. In answer to this question, I have to inform you that being aware that doubt existed with respect to the extent of my liability for the issues of the company, and being desirous of satisfying what I am not prepared to call an unreasonable wish on the parts of a portion of the public, I did, in March, I S46, create a legal liability on my part for all such issues, and that in order to remove all ground of doubt on this subject, and acting what the doubt on the subject, and acting under the advice of able counsel as to the most effectual manner of accomplishing the desired end, I have recently, together with Mr. Mitchell, the secretary, executed instruments creating a personal liability on the part of both of us, to trustees, for the benefit of the holders of the company's notes now outstanding, and those that may be hereafter issued; the transcription may be hereafter issued; the transcription was respectfully, "George may be hereafter issued; the trustees being William H. Brown at

GEORGE SMITH."

The following appeared in the Democrat of December 11, 1849: "Some fifty or sixty of the merchants of the city have published a circular expressing confidence in the notes of the Wisconsin Marine & Fire Insurance Company."

There was very little popular distrust of the bank after this date. Its circulation was still further increased in amount, and for the succeeding three years was the

favorite currency throughout the West.

The Chicago Democrat was at this time violently opposed to banks and banking as carried on in the West, whether legal or illegal, and kept up a constant fusilade against them all. It represented, however, quite fairly the different phases of the business as they transpired. The following excerpts are deemed of historic value:

Issue of April 16, 1849:

"Chicago Temperance Saving Association .- Deposits from a dollar, upwards, received, drawing seven per cent interest, payable half yearly. William H. Brown, president; Charles Walker, vice-president; J. Wilcox, secretary; T. B. Carter, treasurer; Alfred Cowles, attorney. Loaning Committee: B. W. Raymond, Thomas Richmond, Henry Smith."

June 26.—" A new banking and exchange house has been opened in this city by Messrs, Curtiss & Tinkham who, having command of considerable funds in Ohio and other currency, it is expected by the produce operators and others, will be able to extend the facilities now afforded for the purchase of the productions of the country. E. I. Tinkham, late cashier of Wisconsin Marine & Fire Insurance Company, is a partner in the firm."

September 19, under the head of "Money Table:" "Bills bankable and commanding specie at one per cent: New England banks in good credit, New York State banks in good credit, New Jersey and Maryland banks in good credit, Ohio, Indiana and Kentucky banks in good credit, Michigan, Virginia and Missouri banks in good credit, Wisconsin Marine and Fire Insurance Company certificates, Pennsylvania banks, not over one

per cent, discount in New York.

"Uncurrent.-Canada, three per cent discount, Pennsylvania, par to three per cent discount, Tennessee, not taken. State Bank of Illinois, fifty per cent discount, State Bank of Shawneetown, seventy-five per cent discount."

"Scrip.-Chicago city orders, par to five per cent discount; Cook County orders, thirty to thirty-five per cent discount; auditor's warrants, ten to fifteen per cent discount; one hundred and sixty acre land war-

rants, \$132 to \$154 each.

"Exchange.-On New York, Albany and Boston, one and a half per cent premium for currency; on New York, Albany and Boston, one per cent for specie; on Buffalo, three-quarters of one per cent premium for currency; on Buffalo, one-quarter of one per cent premium for specie; on England, \$5.10, the pound sterling, in sums to suit."

In the same issue (September 19) R. K. Swift

advertised as follows:

"R. K. Swift will receive deposits of money and allow interest as follows: On certificates payable five days after demand, four per cent; ten days, five per cent; fifteen days, six per cent; twenty days, seven per cent; twenty-five days, eight per cent; thirty days, nine per cent; forty-five days, ten per cent. If the sum or sums deposited by one person should exceed \$1,000, the time of demand is to be arranged by special contract. A deposit book will be opened from I till 2 P. M. every day holidays and Sunday excepted) at the residence of the subscriber, 48 Michigan Avenue, for the benefit of ladies, and one per cent more will be allowed them over the rates above named.

"R. K. SWIFT, "Office over Kohn's store, 111 Lake Street."

Mr. Swift was the first banker in Chicago to inaugurate banking exchanges with California and the Pacific coast. In the same paper from which the above is quoted appears the following:

OR. W. Swife

"California Loan Office.-Parties who make loans or discounts of the undersigned may, if they desire, contract to make payments at the office of E. & R. K. Swift, San Francisco, and have interest stopped pro rata from the date of such payment; or to make payment by drafts to be drawn on the subscriber by said E. & R. K. Swift, of San Francisco; and such drafts to be received as payments and stop interest pro rata, either from date, sight, or maturity of the same, as may be contracted at the time of making the loans or discount. The rate of interest will necessarily be high, and the most rigid scrutiny will be required.

"R. K. Swift, 111 Lake Street."

" Exchange Office-San Francisco-E. & R. K. Swift will remit money to and from San Francisco, and will also receive deposits of money at San Francisco and cause the same to be remitted to any of the leading cities in the United States, Canada or Europe, and will

ship packages of goods from Chicago, by way of New York and Cape Horn, to San Francisco.

" R. K. Swift, Chicago.

" ELIJAH SWIFT, San Francisco.

The intensity of the hatred which the Democrat cherished toward wild-cat currency is evinced in the following, which appeared in the issue of December 1,

"Private Banking.-We understand that before long we shall be blessed (?) with more home-made money. Among those who intend to issue bills we have heard mentioned: R. K. Swift (we have not learned the name of his bank), I. H. Burch, Esq. (Chicago Bank, we suppose), and J. Y. Scammon, Esq. (Chicago Marine & Fire Insurance Company). Glorious times, bye and bye, if paper money will make them."

The above brought the following response from Mr.

Scammon, which was published December 8:

"BANKING OFFICE OF CHICAGO MARINE & FIRE INSUR-ANCE COMPANY, December 1, 1849. To Editor of Democrat: In your paper of this morning I find my name as connected with this institution included among those who intend to issue bills. Permit me to say through the same medium that it is not my intention to issue bills or any other circulation. The object and design of the Board of Directors of this company are to establish a substantial and responsible marine insurance company, in which our citizens shall be interested, and which shall be chiefly owned and managed here. Besides the business of insurance, the company will receive money on deposit, and loan it and the capital of the institution, and it is our intention to organize a savings department, under such guarantees as will make it undoubtedly safe to depositors.

Your obedient servant,

"J. Young Scammon."

As further proof that the Chicago Marine & Fire Insurance Company did not intend to issue bills, the following, which appeared in the Democrat of December 6, 1849, is given:

"Chicago Marine & Fire Insurance Company .-At a meeting of the Board of Directors of the Chicago Marine & Fire Insurance Company, held November 26, 1849, the following resolutions were read and adopted:

"Resolved, That the business of this institution shall be divided into two general departments; one to be styled the Insurance Department, and the other the Deposit and Loan Department. The business of the first department shall be mainly confined for the present to marine insurance; that of the second to the receiving of money on deposit and the loaning of the same. The second department shall be subdivided into a general deposit department

and a savings department.
"Resolved, That for the protection and security of all persons who shall make deposits in the savings department of this institution, it is hereby declared, and the company do hereby contract and agree that all such sums of money as shall be deposited in the savings department of this institution shall be held in trust for said depositors, and shall not be mingled with the general funds of the institution, but shall be kept, used and invested by this company as a distinct fund, the principal thereof belonging in equity to such depositors respectively, and not to the institution, so that, in no event, shall such funds be jeopardized by other trans actions of this institution, this institution agreeing to return such deposits with interest, at the rate stipulated in the respective deposit books or certificates of deposit, but this institution and all its property and funds shall nevertheless be liable for the payment

of such deposits.
"Resolved, That it is not the design or intention of this instition to exercise any doubtful powers, or to do any act not clearly

within the limits of its charter.

"I.YOUNG SCAMMON, President."

"E. B. McCagg, Secretary."

In the same issue (December 6, 1849), appears the following advertisement:

"Exchange Bank, S. Bronson & Co., 60 Clark Street. Collections and remittances made on all parts of the United States.

Deposit accounts kept. Lots and farms for sale. Drafts on New York at one per cent. Premium for currency." "The subscribers are selling exchange on New York, Albany and Boston, for currency at one per cent premiums; for Eastern bills at one-half per cent premium. GEORGE SMITH & CO."

BANKING UNDER THE STATE LAW | 1851 to 1861 The period from 1843 to 1860 was one of marked growth in business and population, and it is not strange that acute financiers should have discovered that the deprivation of a local circulation was becoming each year, as business increased, an increasing loss to the State. In 1851, the business of the State, and especially of the northern part, of which Chicago had become the trade center, had so increased that a new banking law had become an imperative necessity. The irresponsible issues of individual bankers, however well secured, and the currency of banks outside the State were not considered adequate, safe or profitable, for the best business interests of the commonwealth. Accordingly in 1851, the Legislature passed a general law, under which legal banking was again established. The law was passed February 15, 1851, and amended February 10,

It was copied in its essential provisions after that of the State of New York, and is so generally familiar to the intelligent reader as to render it unnecessary to give it entire. The general provisions were as follows:

The State Auditor was authorized and required to cause to be printed and engraved, in the best manner to guard against counterfeiting such quantity of circulating notes, in similitude of bank notes, in blank of different denominations, not less than one dollar, as he might from time to time deem necessary to carry into effect the provisions of the act. These blank bills were to be countersigned and registered, and, when given out under the provisions of the law became the

legal money of the State. Any person or association of persons formed for the purpose of banking under the act were required to legally transfer to and deposit with the Auditor any portion of the public stock issued or to be issued by the United States or any State stocks on which full interest is annually paid, or the stocks of the State of Illinois the State stocks to be valued at a rate twenty per centum less in value than the market price of such stocks to be estimated and governed by the average rate at which such stocks have been sold in the city of New York, within the previous six months preceding the time when such stocks may be left on deposit with the Auditor. The Auditor was forbidden to issue bills for banking purposes on the security of any State bonds, on which less than six per cent per annum was not regularly paid, except at least two dollars in such bonds, exclusive of interest, be deposited for one dollar of bills so issued.

At the valuation thus prescribed the corporators were entitled to receive a like amount of bills, which on being countersigned by the officers of the bank thus created, they were authorized to loan and circulate as money, such bills being made payable on demand, at the place of business, in the State, where the bank had been established.

In case any bank should fail to redeem its bills on presentation, and on formal complaint thereof, made in manner prescribed in the act, the said bank was to be restrained from doing further business and the securities deposited were to be applied first, to the redemption of the outstanding circulation, and the residue, if any should remain, to the payment of other liabilities of the bank.

Each stockholder was made individually liable in proportion to the full amount of capital stock owned by him. The banks were to be examined annually by a

board of commissioners, and a detailed report of the financial condition of each bank doing business under the act filed with the Auditor. Quarterly reports were also to be made by the officers of such banks to the Auditor.

The law was submitted to the people for ratification, at the fall election, and ratified. The vote in the State was: for the banking law, 37.578; against, 31.321. The majority in Cook County for the law was 2.332.

Pending the ratification of the law the Gem of the Prairie, November 15, 1851, said:

" Our local currency is now supplied by the following banks: The Wisconsin, Marine & Fire Insurance Company, the Chicago bank of 1. H. Burch & Co., the city bank of Bradley & Curtiss, the Southwestern Plank Road Company, Macomb County Bank, Michigan, Oswego & State Line Plank Road Company, and the Illinois River Bank. The bills of these banks passed readily among us. They were called into existence by the necessities of the times, and, although everybody is dissatisfied with the establishment of money institutions in our midst, without the sanction and control of law, they have met the sanction and countenance of the community, and will continue to do so, unless it shall turn out that the State has adopted a general In that case, we apprehend that whatbanking law. ever banking institutions may be in Illinois must comply with the law, or their bills will be forced out of circulation.'

In advocacy of a general banking law the Gem of

the Prairie, October 26, 1851, said:

"Illinois is flooded with the issues of foreign banks. Our people pay several hundred thousand dollars for a currency, the whole of which goes to enrich private corporations of the Eastern States. The general banking law, on which we are to vote in a week or two provides securities far superior to those of a large majority of the banks whose issues go to make up our present currency, and it effectually guards against over issues. It will furnish us with a home currency to be kept under the control of laws of our own making, the interest of which will be retained in the State, augmenting the general wealth, instead of being carried off, thereby impoverishing our people to the tune of hundreds of thousands of dollars annually." \* \* \* have this or that? That is really the question before One or the other we must and will have."

Under the provisions of the act passed and ratified by the people, what was termed legal banking was again begun in Illinois. The first bank organized in Chicago was the Marine Bank. It filed its certificate of organization January 13, 1852. Its capital was at that time \$50,000, which was increased May 20 by an addition of \$500,000. Bonds were deposited, according to the Auditor's report, October 20, 1852, to secure a circulation of \$99,044. J.Y. Scammon was the president of the institution and Edward I. Tinkham its cashier. The first appearance of its bills was announced in the Democrat of April 21, 1852, as follows:

"MARINE BANK.—The bills of this bank, the first issue under the General Banking law, made their appearance on Saturday April 17. The plate is a very fine one and will not be an easy one to counterfeit."

On the following day the Democrat described the

bill as follows:

"We received yesterday in the course of business a \$5 bill of the Marine Bank. It is finely engraved, having for a vignette, the bust of that distinguished philosopher and theologian, Baron Swedenborg, with rays emanating therefrom, placed between two beautiful women. The only thing we objected to in the bill is the embellishing it with ladies-emblems of innocence -as though there were anything innocent about banking institutions. The bills are secured by stock deposited with the Auditor.

The Democrat of February 18, 1852, announced the organization of the Merchant's and Mechanic's Banks

of Chicago.

"Banking House, No. 5, Clark Street; Levi D. Boone, president; Stephen Bronson, Jr., cashier.'

Messrs. I. H. Burch & Co., proprietors of the Chicago Bank, promptly legalized their institution. The

Democrat, July 7, 1852, announced the fact :

"Messrs, I. H. Burch & Co., of the Chicago Bank have filed the necessary papers for the organization of their bank under the general law of the State, with a capital of \$1,000,000. Mr. Burch has done business in this city for a number of years, and earned an enviable reputation."

October 9, the same paper said:

"The Chicago Bank is now in full operation, \$108,ooo of State stock having been deposited with the Auditor as a basis of circulation. Additional deposits of stock will be made soon. The nominal capital is \$1,000,000. The following is the list of officers: Thomas Burch, president; Alfred Spink, vice-president; I. H. Burch, cashier."

The Southwestern Plank Road Company filed the necessary papers with the Auditor to render it a legal bank, in the latter part of May, 1852, and was there-

after known as the Commercial Bank.

Messrs. Bradley & Curtiss started banking under the law in June. Their bank was known as the Chicago

City Bank.

In May, Forrest Brothers & Co., opened a new banking house. On the announcement, the Democrat of May 6, 1852, says: "They have done business both in this and the old country, which will give them advan-tage on foreign exchange. Banks are now getting as thick as groceries in our city, and, as we are to have them, the more we have the greater the competition and the less the shave." This banking house did business as the Union Bank. The Democrat of August 19 said concerning it: "A new bank is that of Forrest Brothers & Co., which commenced business with a capital of \$200,000. The gentlemen connected with this establishment have long been well known in this city. The stocks have been purchased, the company organized and they will proceed to business as soon as the notes can be engraved. The officers are: Andrew J. Brown, president, and Henry L. Forrest and Thomas L. Forrest, joint cashiers

The Democrat of August 5, 1852, announced: "The old post-office building has been refitted by Dr. Davisson, and is now occupied by Messrs. Davisson & McCalla as a banking office, under the name of the Bank of Commerce." The announcement in the same paper, October 7, 1852, shows that at that time, it was doing, or preparing to do, a legal business. It read as follows: "The Bank of Commerce is now organized under the general banking law, with a capital of \$600,ooo. A. W. Davisson is president and T. McCalla, cashier."

Chase Brothers & Co., advertised in the Democrat, December 25, 1852, that the Farmer's Bank, No. 100 Randolph Street, was opened and ready for business.

Foreign banking institutions also advertised offices of redemption in Chicago. The bills of the Bank of the City of Washington, D. C., were redeemed at 104 Randolph Street., "in current funds or bank

bills," by S. Vrooms. The Mechanic's Bank, Georgetown, D. C., pledged a contingent Safety Fund of United States stock for the redemption of its bills. The Democrat of October 8, 1852, in which the above information appeared, said: The Mechanic's Bank, of Georgetown, comes into our market to compete with our bankers and brokers, in the fiscal transactions growing out of our large trade and commerce."

Bills purporting to be issued by the Bank of America, Washington, D. C., were redeemed by George Smith, who had bought a controlling interest in the institution in April, 1852, and became its president. He organized a bank under the same name under the State law, July 19, 1852, depositing bonds sufficient for the redemption of a circulation of \$50,000. Between the

two he floated a large circulation.

THE TRANSITION PERIOD.—As has already appeared the capitalists of Chicago who believed in legal banking were not slow to avail themselves of the benefits of the new law. During 1852, the following Chicago banks were organized:

Marine Bank, January 13, 1851, J. Y. Scammon,

president; Edward I. Tinkham, cashier.

Merchants' and Mechanics' Bank, February, 1852, Levi D. Boone, president; Stephen Bronson, cashier. Commercial Bank, successor to the Southwestern

Plank Road Company.

The Bank of Commerce, papers filed in May, 1852; bonds deposited to secure circulation in October, A. W. Davisson, president; T. McCalla, cashier.

City Bank, June, 1852, was a proprietary bank owned by the firm of Bradley & Curtiss.

Chicago Bank, July 1, 1852, was the successor to the banking business of I. H. Burch & Co.; president, Thomas Burch; cashier, I. H. Burch.

Union Bank, August, 1852, owned by Forrest Bros. & Co. Andrew J. Brown, president; Henry L. Forrest

and Thomas L. Forrest, joint cashiers.

Bank of America, owned by George Smith & Co. (Elisha W. Willard being the co-partner), July 19, 1852. Farmer's Bank, December 25, 1852, was established and organized by Messrs. Chase Bros. & Co.

At the beginning of 1853, the new city directory published, contained the names of the following persons and firms, at that time identified with the banking business of the city:

James M. Adsit, broker, 35 Clark Street.

George J. Brewer (Marine Bank), 37 Clark Street. I. H. Burch & Co. (Chicago Bank), corner of Lake and Clark streets.

Chicago Marine and Fire Insurance Company, 37

Clark Street.

Chicago Bank, corner of Lake and Clark streets.

Marine Bank, 37 Clark Street. City Bank, 24 Clark Street.

Bank of Commerce (Davisson McCalla & Co.), 50 Clark Street.

Exchange Bank, (H. A. Tucker), corner of Lake and Clark streets.

Bank of Chicago\* (Seth Paine & Co.).

Commercial Exchange Company, 66 Clark Street; David Gamble, with George Smith & Co.; Henry Greenbaum, at R. K. Swift's bank; Elbridge G. Hall, money loaner, 103 Lake Street; Jones & Patrick, bankers, 40 Clark Street; Alfred Spink, teller of Chicago Bank; Richard K. Swift, banker, corner of Lake and Clark Streets; George Smith & Co. (Wisconsin Marine & Fire Insurance Company, and Bank of America),

\* The place of business does not appear in the directory. It was then known as Eddy's new building, adjoining the old post-office building on Clark

bankers, 41 and 43 Clark Street; John K. Valentine,

with George Smith & Co.

The year 1852, which witnessed the reëstablishment of banking under the State laws of Illinois, was an exciting one in the annals of Chicago banking. It was soon discovered that, although a new and legal currency had been provided, it was not supplanting the wellestablished and largely-circulated bills issued by the Wisconsin Marine & Fire Insurance Company. "Smith's bills" were still plenty, and were current wherever known, as they were always kept at par with the money of other banks, and redeemable in gold at one per cent discount. Smith had grown rich and somewhat arrogant in his consciousness of financial strength. He continued to flaunt his bills in the face of the new banking law in a manner exasperating in the extreme to J. Young Scammon and other stanch and honest advocates of "legal banking" who had established banks in the city. It was not deemed prudent or practicable by the enemies of his bank to repeat the oldtime attempts to ruin it by a run. He kept himself constantly fortified against aggressive moves in that line, and could have turned the tables on any bank or combination of bankers who should attempt it, in a way which it was not pleasant to contemplate. existed, however, from the beginning a determination on the part of the banks doing business in good faith under the State law to drive the illegal issues out of circulation if possible. Meantime a state of armed neutrality prevailed.

Sometime in the early spring complaints became rice among the people at the current charge of one per cent for gold for bank bills. This was the rate which had been established by Mr. Smith, and it was found impracticable for the legal banks to redeem at par, while his money still circulated as currency, as theirs would be constantly returning for gold while Smith's would remain out performing the functions of money.

The following extracts from the Chicago Democrat, not partial to banks, whether legal or illegal, shows something of the public sentiment on the subject. On

the 4th of May, 1852, it said:

"We understand that arrangements are now being made by all the banks in our city to bring up their notes to too cents to the dollar, instead of keeping them at 99 cents, where they have been for a long time. If all go into this operation, by exchanging notes every Saturday night, they have nothing to fear from each other. Some are afraid of the land sales about to take place in our city. But we think that land warrants will be used at them instead of specie and so this is no objection."

## On the 6th of May it said:

"The people are becoming very much excited upon the subject of the banks not redeeming in specie. We have talked with our bankers upon this subject. Each alone says there ought to be specie payment, but each is afraid of his rivals. Each is afraid that if he pays specie some of his rivals will make a run upon him. There is some plausibility in these pleas, but there is a way to obviate them all. Let there be a common day to all. Let our Board of Trade take hold of this matter. Let there be a committee appointed to see all the banks in the city and make an amicable arrangement whereby all the banks shall commence paying by June 1, or at fartherest by July 1. Our Legislature ought to take hold of this subject, as it is clearly embraced within the terms of the Governor's proclamation; and it is in their power to stop all illegal banking. The Marine Bank is paying specie now, and several of the other bankers have authorized us to say that they are ready and willing to begin whenever a day shall be agreed upon."

From the Democrat of May 24:

"We have conversed with the most of our bankers upon the subject (of paying specie) and they have all said that they would pay specie the moment Mr. Smith did; that they could not pay specie unless he did, for it was in his power to ruin them. Mr. Smith is now here, and is willing to make any arrangement that will give him an equal chance with the other banks, but any arrangement

made must be adhered to in good faith and strictly adhered to by every one. A combination of merchants, to deposit with no one who issues bills not equivalent to specie or to New York exchange at one-half per cent premium, is on foot and should be resorted to. The Chicago & Galena Railfroad and canal trustees have the matter under advisement of taking no bills not equal to specie here. If our bankers have no respect for themselves; if they do not value their own notes at par, it is time they were taught to do so. A people are not free whilst they submit to have a currency that those who issue it at par will not take back at par. Our Legislature is soon to convene, when a stringent law against present abuses should be passed, and there should be no law to collect a note given for such stuff as we are having now for money."

From the foregoing extracts it appears that at that time Mr. Smith, with his illegal issue, was master of the situation, and, with the exception of the Marine Bank, could dictate terms to the legal banks of the city. The proposed arrangement with him fell through. To establish a clearing-house, as was proposed, and exchange bills, would have been in defiance of the very law under which the other banks had been organized.

As the banking law seemed inadequate to drive out of circulation Smith's certificates of deposit, some of the banks decided to avail themselves of the advantages of this system of banking as well as their own, and thus reap the advantage of a larger circulation than was authorized under the law. How many banks entered into this double-headed system of banking, or the amount of their issues cannot now be ascertained.

The Merchants' & Mechanics' Bank did quite a thriving business. The Democrat, August 20, 1852, stated that there were counterfeits of the bank affoat, and warned its readers to take no bills not countersigned by the register, John Neal. In the issue of the next day, the president of the bank, L. D. Boone, replied that there were no counterfeits on his bank, and that he supposed the bill alluded to as a counterfeit was "a certificate of deposit, which the bank was prepared to redeem at any time." An indignant citizen, in answer to Mr. Boone's avowal, wrote that "these certificates, in arrangements, vignettes, figures, and stamps are well calculated to deceive the unfortunate receiver. Such an issue is void, because unauthorized by law, and worthless because the illegal acts of the officers cannot bind the stockholders." The editor added: "If the banking law of Illinois is worth anything, it is in compelling those who issue a paper currency to put up some sort of security to the bill holder with the Auditor."

In the Democrat, September 3, 1852, appeared the following:

"'Dann Shinplasters.'—Excuse us, dear reader—we are in bad humor. We cannot see deception substituted for fair dealing so long as open honesty is the only sure road to success. The Merchants' & Mechanics' Bank of Chicago has issued a shinplaster exactly like their notes which are secured as the law requires. The Western papers call it a "dangerous counterfeit." "Tis worse, 'tis a device, a deception, a fraud, and the only way to avoid it is to refuse all notes on the Merchants' & Mechanics' Bank of Chicago, We have quoted it a doubtful (D. D) and dashed it on our list, and so long as the safety of our readers requires this course we will pursue it.'

"The above, from Thompson's Bank Note Reporter is plain talk. We insert it, not so much to injure this one bank in particular, but because others of our city banks are going into the same operation. The thing ought to be stopped at once. Under our new banking law the bill holder is secured, but there is no security for the depositor. So people who prefer security to no security will hereafter take the legal countersigned bills, instead of the illegal

certificates of deposit.

By September 1, an irrepressible conflict had been worked up between the legal and illegal bank interests. At about this date a new element of financial disturbance was added. All banking in Chicago had, whether legal or illegal, been heretofore conducted on worldly principles and for the object, more or less sordid, of

worldly gain. A new departure in the business was

inaugurated by Seth Paine & Co.

The senior partner, Seth Paine, was a native of New England, and, when a young man, came West. He left Montpelier, Vt., in April, 1834, in company with Chester Smith, who was at that time an Illinois merchant, being a partner of a Mr. Goss at Walker's Grove, now Plainfield. He traveled with him on his western journey by stage, canal and schooner as far as Detroit, where they separated, Smith going through to Chicago by stage, and Paine taking the longer but less expensive route in the schooner "Commerce," by way of the lake. It took his last dollar to pay his deck passage to Chicago, where he arrived after a rough voyage of twelve days, with no capital except health, strength, and a most earnest endeavor to do his work in life according to his eccentric views of right. He was tall and straight. He had a frank, open countenance, and a pleasing and prepossessing address. His conversational powers were excellent, and as a public speaker he was far above mediocrity. He was good humored, and made friends rapidly. He hired out with the firm of Taylor, Breese & Co., and was for a time a partner. Subsequently he entered into a copartnership with Theron Norton, under the firm name of Paine & Norton. They did a fairly successful business for several years. Paine sold out to Norton July 1, 1842, and retired from mercantile business in Chicago. He was married in Chicago on Thursday evening, August 25, 1837, to Mrs. Francis Jones, eldest daughter of Major Whitlock. Paine was always a rabid and uncompromising Abolitionist, and, subsequent to the dissolution of the firm of Paine & Norton, became a convert to the socialistic theories of Fourier, went into Lake County, where he bought a large farm, christened the place "Lake Zurich," and in company with other kindred reformers attempted to carry into practice the socialistic theories he had accepted. How well or poorly he succeeded is not known. It is certain, however, that the enterprise did not prove ruinous nor so discouraging to him as to break his faith in the Fourierite doctrines. He was also for a time a heavy owner and one of the managers of the Illinois River Bank, an unchartered bank at LaSalle, Ill. On the first appearance of what are now termed "spiritual manifestations," in the form of rappings or knockings at Rochester, N. Y., through the mediumship of the Fox girls, he became deeply interested in the phenomena, and soon after became an ardent convert and earnest advocate and believer in modern spiritualismso ardent and earnest as to render him a credulous victim of the many designing mountebanks who attached themselves to that much abused and little understood philosophy. The character of Paine was naturally radical, and molded and fashioned by the many uotside isms he had embraced, could but impel him to the adoption of modes and methods of action quite at variance with those prevailing, in whatever he might undertake. To his vision the affairs of this world were badly out of joint. They were sadly in need of re-organization, and it required Seth Paine to adjust things properly. So he left "Lake Zurich" and his farm, and returned to Chicago to teach his old friends and the world at large how banking could be carried on in accordance with what he deemed a higher law than the banking law of Illinois-the law of humanity.

THE BANK OF THE CITY OF CHICAGO.—The firm of Seth Paine & Co. was formed early in August, 1852. The following announcement appeared in the Democrat of August 10: "Seth Paine & Co. are about to open a

banking and exchange office in Eddy's new building, adjoining the old post-office, on Clark Street." The firm was composed of Seth Paine, who put in about \$1,100, and Ira B. Eddy, who put in something over \$4,000. The capital stock of the concern never exceeded \$6,000, although it was believed that it was backed by capitalists of some strength and character, and at the start it had such financial standing as to

obtain quite a number of depositors.

By the middle of October, the bank was opened for business, as appears by the following notice in the weekly Democrat of October 18: "The Bank of Chicago has determined upon issuing certificates of deposit, and issues are now out, which for artistic skill and beauty of finish are not exceeded by any bills we have seen. On the right of the ones is a beautifully executed portrait of Senator Douglas, engraved by the well-known Tappan, Carpenter, Cassilear & Co. On the right of the twos is Washington crossing the Delaware, and on the threes a fine portrait of Henry Clay. Mr. Paine, who is at the head of the banking house of Seth Paine & Co., is president and W. T. Muier is cashier."

So soon as the bank commenced business it was apparent that Paine's theory of banking was as unique as were his other theories, and, if carried out, would be equally subversive of the interests of both legal and illegal banking; indeed, it was his idea to work as radical a change in banking, as he believed would come to society as a whole by the adoption of the theories of

The prospectus of the bank, written by Paine himself, gives the high moral grounds on which the bank was to be conducted. It read as follows:

> " BANK OF CHICAGO. " PAINE, BROS, & Co.

"Rates of discount according to time and circumstances-six per cent being the highest.
"We loan to no one to pay debts.

"We loan to no one to aid in murder of anything which has

"We loan to no man to aid in speculating in that which is necessary to life.

"We loan nothing on real estate-believing that real estate cannot be bought and sold; and that possession with use, is the only title.
"We loan nothing to aid in making or selling intoxicating

liquors, or tobacco in any of its forms.
"We loan nothing to gamblers or usurers who borrow to loan

again.
"We loan nothing except for aiding the natural exchange between the producer and consumer, whether of body, soul or

spirit—and for the time necessary to produce the exchange.

"Our basis for making loans is the established character of the borrower. He must be a temperate, honest and religious man the borrower. He must be a temperate, houses and rengates many or woman, with a mind sufficiently developed to understand his business. We are prepared to loan any amount needed for such business by such men. Our money corresponds in commerce, to the blood in the human system. It is the circulating medium. When money is used for the purposes of slaughter and shedding of blood, it makes the blood run cold; and it stagnates, and ceases to be healthy, and does not circulate freely, and finally ends in

death. "When used by any of the other classes excluded, it also ends in death. We want no business done which is death to the human body, or hell to the soul; and we would as soon furnish a rope to out brother for hanging himself, as the money to buy it with. would as soon kill ourselves, as lend our money to aid in killing. We would as soon drink ourselves, as lend our money to drunkards. We would as soon take high rates of interest, as loan the usurer facilities to do the same thing. We would as soon take the life of our brother, as lend our aid to speculators in the bread of life, who may starve him into a living death, while they permit not the prayer for desolution. All has its foundation in Hate; and 'He that hateth his brother is a murderer! '-We will no longer mur-

"His established rate of interest was not to exceed

six per cent per annum. He proposed to loan his certificates on satisfactory security, for three-fourths of the amount, and an even exchange of the other one-fourth in current bank notes (such as the certificates were payable in) with the agreement on the part of the borrower that as often as one-tenth of the amount borrowed was returned for redemption, he should take them again, giving in exchange current bank notes. The plan, in other terms, was to make each borrower a sort of fiscal agent of the bank, pledged to keep in circulation or redeem so much of the money as he had borrowed and put in circulation. Had the people given Seth Paine their confidence and supported in as full measure as did the people of the Loyal States the Government during the war, and had Seth Paine's fiat money been

quarters of as ardent a set of Spiritualists as could be found in the country. Both Paine and Eddy, his moneyed partner, were bright and shining lights of this Spiritual Church, and prominent and loud exhorters at the frequent meetings held over the bank. It was not long before the bank became so identified with the spiritualistic views of the proprietors as to be inseparable in the minds of the outside community.

January 1, 1853, Mr. Paine issued the first number of a paper styled the Christian Banker. The articles were somewhat incoherent, abounded in wit and sarcasm, and so intermingled spiritualism, banking, and anti-monopoly, that it is no wonder many believed Paine had gone stark mad. In addition to his polemical articles, he was bitterly personal, and in his efforts

FAC-SIMILE OF SETH PAINE'S THREE DOLLAR BILL,

backed by a power co-equal to that of the General Government: and had Paine possessed the power, as did the Government to put out of circulation all other issues save his own, his money would have proved as good as greenbacks. Unhappily for Paine, none of these conditions indispensable to success as a fiat-money manufacturer were youchsafed to him.

For a few weeks after it was opened for business, the bank did a quiet and unostentatious business with a class of very respectable citizens, who believed in the applications of moral principles to banking, as inculcated in Paine's manifesto, and who were not sufficiently practical to foresee the obstacles to be encountered in establishing the institution in a not over moral community, made up largely of men who drank spirituous liquors, smoked and chewed tobacco, butchered cattle and hogs, and ate the meat, speculated in bread stuffs and other articles of food, bought, sold, mortgaged and owned land, loaned money at over six per cent, and otherwise brought contempt upon the code of morals on which the bank had been set up.

Perhaps Paine's overweening confidence and often ill-timed advocacy of the many vagaries which he cherished, and which in a most illogical manner he managed to attach to, or mingle with his banking business, had something to do with precipitating the calamities that befell the institution.

Over the bank was "Harmony Hall," the head-

to pull down the strongholds of sin, spared none who stood in the way. The articles became more vituperative with each succeeding issue, as increasing outside annoyance gave fresh cause, from his view, for righteous

Seth Paine

indignation. As showing the mental condition of Paine at this period in his banking career, and as relies of the time, quite copious extracts from the Christian Banker, Vol. 1. No. 4, date January 29, 1853, are here given.

Extracts from the Christian Banker:

"Our Pulpit.—We preach daily (Sunday excepted, when we talk, as the spirit moves, in Harmony Hall, at half-past ten in the morning and seven in the evening in the Bank of Chicago. Our hearers give increasing evidence of hope within thir souls, and go forth as radiators of new light. If a cigar-smoker or a rumsucker, or hog-eater comes in for there are such men in Chicago yet), who not only have so little respect for themselves, but actually intrude such offensive influence before us as would make a dog puke; we refuse to do business with them, but send them right over to Swift, who smokes to drown conscience, which has been violated so long by huge shaves of his fellow-men, that

the hair has all come off over that organ.—See Eddy on phrenological bumps. There all smokers can find

sympathy.

Our pulpit brings faith and works together. Ignorance supposes we would loan our bills for the sake of money. But intelligence radiates from our pulpit, and permeates their addled brains as far as wholesome truth can reach a tobacco bloat or a sucker of rum, and tells them that our faith is true, and they can't borrow for love or money. Some come in to exchange our bills for something which our addle-headed bankers take on deposit, (they take nothing which goes out at less than ten per cent)—that being their standard of both faith and dumplings. Well, Illinois River bills are bankable, and why should they not be? Taylor is interested in him, especially in this crisis, for they regard him as a great manager.

"So we give them bankable bills-Illinois River bills. Our bills are signed by Seth Paine, president, and are issued in pursuance of law. Those bills are signed by Seth Paine, treasurer of the Salisbury Plank Road, which was never built or intended to be-and my responsibility passed from the concern long ago. Churchill Coffing was president, but he, too, has sold out, and we both know there has been no responsibility there since. Taylor & Gurnee make a newspaper advertisement saying that they are responsible-but this amounts to nothing-they are not legally holden, and they have no moral responsibility-and if they had both, they are unable to pay their own debts, much less to give responsibility for several hundred thousand dollars, which they have loaned to themselves and others, and which they never intend to pay. This trash is bankable, and so Seth Paine, plank-road treasurer, goes for his subsequent issues. This shows the need of our pulpit—the need of light. \* \* \* From present indications preaching is still needed. So bring on your bills for redemption, and when objection is made to the various trash paid out by Tucker, Burch, Smith and other chaps here, we will open our mouth or the Lord will open the mouth of Balaam's Ass to keep you from being shaved twelve per cent by the Great Mogul and his undertrappers, who, next to R. K., pursue the people with Swiftest destruction, and keep you trotting over here with bills for redemption, till you wear out more shoe leather than Jo. Kenyon's whole stock amounts to-all because you don't know any better than to keep your accounts with men who throw us out because we reduce rates.'

In an article on taxation the editor says:

"In our first number, I said we would pay'no more taxes—and on that lovely spot at Lake Zurich, the Lord of Hosts and the devotees of Mammon shall measure swords, and test the right of a set of vampires to prey upon my substance.

"We well considered what we said, and we have been greatly strengthened in our convictions since that time. We say that man has an inalienable right to as much soil as he can occupy and cultivate; that he cannot acquire any title to more, nor be restricted in his title to less. Any attempt to acquire more is as great a crime as to submit your right to less.

"It was a great crime in the Jews to crucify Jesus, yet no greater than for a man to attempt holding this

earth by a parchment claim. \* \*

"I claim the right to my land by the right of nature. God gave it to me, and I say to those who claim it, 'show me the title superior to God.' If I have a right to the soil I have to my sinews, and the turnips which those sinews and God's rains and sunshine produce.

They are either God's or mine. If God's, levy your taxes on Him, take the turnips if you dare, for taxes or anything else. If they are mine, take them if you can."

The opening paragraph of a lengthy article on "Spiritualism," shows that Paine believed that the directors of his bank were not all taxpayers or property

owners in Chicago. It read:

"The subject (Spiritualism) may hardly seem appropriate in even the 'Christian Banker,' but when men come to an understanding of the truth as it is in Jesus, they will see clearly that it is appropriate and necessary. When men come to know of the connection and exchanges between mind and matter, surely they will not wonder that we have sustained our position against the entire moneyed hosts, and in the face of falsehood, detraction, Grand Juries, corrupted Judges and bribed lawyers. No, if the dark minds of Clark-street bankers were open to the knowledge of our minds, and the hosts of God who are managing this whole matter, and could only be made aware how little and how dark their point of vision, they would no more think of contending against us than of an attempt to dethrone Almighty God.

"We have not only direct communication with God, but we are surrounded by the mightiest intellects who have swayed this world and this country. Thus armed, it is not us, but God, against whom you fight. We have no feeling or war against any banker in this city. We regard every one a brother, and would rather do him good than anything else, but our course is rendered necessary by the false attitude they assume and the false position in which they have placed themselves. The scourges which we have and shall inflict, are all for their present and eternal good, and the moment they assume a true and teachable position, we shall show them this by impressions which will be made by the spirits upon their own minds. But they must let reason and charity, not passion and avarice, be their guiding star."

The prospects of "Union Stores" was discussed

thus:

"Be patient, brothers. The good time is close at hand. Lying, cheating and stealing, as competition needs and cannot live without, shall give place to truth, love, and honesty. We will soon have the matter in hand. You selfish fellows may as well wind up before

we administer on your estates. Following are extracts from his "Market Reports": "We commence our market report this week, and it will be seen there is a strange coincidence between the high prices of pork and preaching, money and falsehood, and the great difference between theory and practice, talk and work, intelligence and ignorance, priest and people, saint and sinner, shaver and shaved, gouger and gouged, banker and customer, dancer and fiddler, twelve per cent and upwards and six per cent and downwards, man and hogs, God and the Devil, Christian bankers and Christian shoemakers,\* the Chicago Press and common honesty, the higher law and the lower law, and many articles offered in Chicago at the board of brokers, and in the higher and more spiritual circles, at the board of robbers, which public sentiment tolerates and keeps in being, while it will be seen that in proportion to the rise in steeples has been the fall in

"There has been but little Christianity in market, and much that is offered is of the scurvy order. This kind, however, bears a much better price than the more

<sup>\*</sup> Under this name a paper was issued a few weeks as a travesty on Paine's "Christian Banker,"

perfect, as the tastes of consumers have been destroyed by rum and smoke, until their heads and hams are in a

"Christianity being the purest and scarcest metal, like gold among bankers, we take it for our standard; and everything and everybody which does not come up to that standard, we quote below par, until they reach the point where neither zero nor Nero can measure them.

"In money of the outer circles, we place the Bank of Chicago at par.

"Bills received on deposit so long as they keep good

"Commercial Bank, I. Cook.

"Union Bank, Forrest Bros. & Co.

"Bank of Commerce, Davisson, McCalla & Co.

"Bank of America, Smith & Willard-Don't mistake this kitten of Illinois, for the old cat at Washington, lest you get your eyes scratched out by mother of frauds. Reject this as you would the small-pox. It was gotten up to bolster Wisconsin, but will be the fruitful source of speedy dissolution to the whole brood of cats, both wild and tame-regular and irregular.

"Merchants and Mechanics' Bank, Boone & Bron-

"Chicago Bank: not the Chicago Bank of I. H. Burch, or a shinplaster of Little Falls in the State of New York. This was conceived in iniquity, and went forth a fraud-a draft upon somebody not accepted, paya-

ble at some place, without legal identity.
"Exchange Bank, H. A. Tucker & Co. This concern exists only in name, and exists only as the nurse of unfledged goslings hatched from rotten eggs, by the Macomb County goose at Mt. Clemens, the issues of which, like Smith's fraud at Washington, are not taken on deposit by us, any more than those Illinois River issues, which are sustained in being by the same system of 'Kiting.

"City Bank-This bank is said to be on its last legs, and the Penn Yan attachment which floods the country and which has been driven to protest by us again and again, will not be worth half price in a very short time. Depositors in this like those of Smith, are daily losing confidence, and the day of its doom is written. For some time past, they have shinned about for even shinplasters, to meet their returning circulation, and have deposited their best securities with different bankers, leaving their remaining circulation without foundation. We don't think they can keep open doors one week

longer.'

Sufficient has been quoted to show that the editor of the Christian Banker was not disposed to "turn the other cheek" when he was smitten, and that he did not propose to give up his cloak nor even his coat without a vigorous fight. By his indiscriminate attacks on every body and everything, outside his own circle, he alienated the common sympathy which otherwise would have been bestowed upon him. He became the Ishmael among Chicago bankers, whose hand was against all others, and against whom every other banker's hand was raised. During the month of January, 1853, Paine's bank was constantly called upon to redeem every bill which came into the possession of rival banks. The circulation at its highest did not exceed four thousand dollars, yet this small amount kept Paine quite busy, as through the machinations of his rivals and enemies, it seemed to find its way back to his bank for redemption as fast as it could be paid out, and the circulation thus became a source of constant annoyance to him instead of proving, as he had hoped, a source of profit to himself and a bless-

ing to the community. In his tribulation, he looked to the departed spirits of illustrious bankers for counsel. It was given through a Mrs. Herrick, a speaking and trance medium, who, at that time presided as "high priestess" over the Spiritual Church in Harmony Hall. She, or rather Alexander Hamilton, through her, advised Paine and Eddy what course to pursue, and, in order to give specific advise on the daily and hourly emergencies as they might arise, the High Priestess came down from the altar and was installed behind the counter of the bank, as a spiritual director. She told them for whom to redeem, and who were to be denied. No smokers, drinkers nor bankers were to be paid. Women, children, negroes and spiritual minded men were to be served first. So soon as it became known that the bank was being thus conducted, on petition of Ira B. Eddy's friends, he was brought before Judge Skinner, and on hearing of testimony, a commission of lunacy was granted and he was declared incapable of managing his business affairs. An injunction was served in order to protect and preserve Mr. Eddy's interest in the bank. By the commission of lunacy Devotion C. Eddy was appointed conservator of the estate of Ira B. Eddy, and John W. Holmes, book-keeper. As soon as this became known there was excitement without and within the bank. The holders of the bills began to flock in crowds to the bank, where Mr. Paine and the priestess were installed behind the counter grimly awaiting the assault of their enemies. Most of the bills were redeemed, but occasionally a man came up whom for spiritual reasons the priestess spurned. Such persons were collared by the husband of the priestess and one or two other stalwart Spiritualists who acted as door-keepers, and incontinently hustled out. Judge Hoard was thus tumbled, and Ezra L. Sherman, after a smart tussle with the spiritual police, came out in a dishevelled and flurried condition. The worthy Colonel (then Captain) James R. Hugunin made a wager at Swift's bank (cigars for the crowd) that he could go over to the bank, being a friend of Seth, and get his bills redeemed. He took \$35, and walked confidently across the street into the bank, and up to the counter, where he affably presented his bills for redemption. Paine looked favorably upon his case and would have redeemed on the spot, but the spirit of Alexander Hamilton looked sternly out of the eyes of Mrs. Herrick, and out of her mouth his words came in startling cadence. "Never! get out!!" "Then give me back my money," said the mild-mannered Captain; "Never! get out!!" again quote the priestess, and forthwith the Captain was hastily leaving the bank, wildly clawing the air as he proceeded toward the sidewalk, and the bank door was slammed, not exactly in his face. A moment after it was reopened, Seth appeared and gave to the shakenup Captain the bills, and he returned to his friends at Swift's. "What luck, Captain?" cried the crowd. "Good!" "What kind of bills did Paine give you?" "The very same I carried over, and I was deuced lucky to get them. I think I can afford to pay the cigars."

Things culminated at the bank on the following day, February 11, when the conservator of Eddy's estate undertook to get possession of the bank. Ira P. threatened to shoot, and the priestess refused to abdicate in favor of Holmes the book-keeper, whom the court had appointed. On complaint of Holmes, for attempt to intimidate by personal violence, the whole corps of the bank, including mediums and spiritual friends, were arrested and brought before Judge Rucker. The trial resulted in the discharge of two or three, and the binding over in \$500, to keep the peace.

of all others except the high priestess. During the trial she became unduly demonstrative, and was taken to jail, resisting the officers on her way quite stubbornly. She was held in durance vile until the storm was over. Ira B. Eddy was for a short time in the Hartford Insane Asylum, but was soon liberated on petition of many respectable citizens who had known him long and well, and who had doubted from the beginning the means by which his committal had been brought about, as well as the alleged fact of his insanity.

The Bank of Chicago was, by the removal of Eddy's deposits, crippled to that extent that it never rallied sufficiently afterward to be even a disturbing factor in the finances of the city. So far as is known, every bill was redeemed and every indebtedness of the bank honorably paid, either by Paine, Eddy, or the conservators of Eddy's estate. The bank, eccentric as it was, was not, as were many of its contemporaries, buried either

in dishonor or insolvency.

Paine continued to protest through his Christian Banker, and other channels, until summer had come, when he returned to Lake Zurich, where he lived several years indulging in his vagaries in a harmless manner. His theories and plans, however they may have occasionally brought discredit to his head as a well-balanced motive power, were ever creditable to his heart. Among his large-hearted enterprises, which he started after his banking experiment had come to grief, was a school on his farm. He named it the Stable of Humanity. He returned to Chicago in 1868, and organized a "Woman's Home." The object of the institution was to better the condition of that class of women who, having no homes, are forced to take such accommodation as the ordinary city boarding-house afforded. The Woman's Home was to be so conducted as to give to friendless women the comfort and protection of a home at a moderate price. Paine managed the "Home" for several years. It was located at the corner of Jackson and Halsted streets, where the Farwell House now is. Mr. Paine died in Chicago in

THE BANK WAR .- The collapse of Paine's bank did not end, but rather intensified the antagonism between the legal and the illegal bankers. Indeed, the war had been carried on unceasingly all through the period covered by the preceding history of Paine's raid on

both camps.

December 23, 1852, the Grand Jury found bills of indictment for carrying on a banking business in violation of the laws of the State, against the following persons: Henry T. Adams and Charles L. Chase, of the Farmer's Bank; Seth Paine and W. T. Maier, Bank of Chicago; L. D. Boone and S. Bronson, Merchants' and Mechanics' Bank; Thomas McCalla, Bank of Commerce; J. R. Valentine, cashier of the Bank of America; and George Smith and E. W. Willard, Wisconsin Marine & Fire Insurance Company. The following allusions to the matter are taken from the Chicago Democrat of December 25, 1852:

" Bank War .- The regular banks have succeeded in getting about a dozen of the irregular banks indicted. Those interested in the irregular ones are going to swear away the suit from Cook County because both the Judges are stockholders in the bank whose head man \* was mainly instrumental in getting up the crusade against the irregular ones. Meanwhile the irregular ones are demanding specie as fast as they can get bills to demand it upon. But the joke is, many of our regular banks are irregular ones too, and keep some old corporation or some old name to get extra shinplasters under or extra interest with. Thus they carry water upon both shoulders. The Spiritual Bank, so called, is believed to be backed by some of the wealthiest bankers in our city. At any rate it has good references, as see the card of Seth Paine & Co. under our advertising head. Let this bank fight go on until banks like individuals shall be made to obey the laws in every respect, in taking interest as well as issuing bills."

On the 1st of January, 1853, the Democrat said:

"Yesterday, all through the streets there was more excitement against the irregular banks than we ever knew before, and the irregular banks were searching in every direction for the bills of the regular banks so as to demand the specie. It is hard now to get hold of a regular bill. Great inquiry was made to know why some irregular banks were indicted and some not. We have inquired of the jury, and find that while their intentions were good they could not get the requisite information against some, whilst certain of the regular bankers were over anxious to furnish information against others, the complainants being as prompt in withholding information against some as they were to furnish information against others. The fact speaks volumes, that the wild-cats who have regular bankers for dormant partners were not indicted.

All was not harmonious even in the regular camp. There was bickering and heart-burning, and crimination also there, as is evinced by the following which appeared in the Democrat, January 1, under the caption of "Bank

Reform . '

"See cards of Messrs. I. H. Burch & Co., Forrest Bros & Co., R. K. Swift and others in our columns (the cards do not appear in the issue). We are informed that these gentlemen and several others of the regular banks in our city are ready to live up to the general banking law as to rates of interest, the moment another of the regular banks which abuses its own charter by resorting to an old insurance company \* to protect itself in a gross violation of the letter and spirit of the General banking law, will loan to its customers as it does to

that insurance company.

The suits brought under the indictments amounted to but little. There is no record that anybody was ever punished for a violation of the law. Some of the irregular or illegal banks went out of existence because of their inherent weakness, and others, having financial strength, took refuge under the statutes of Illinois, Wisconsin and other States. Under the indictments, it was found that the end was likely to be too far from the beginning, and that pending the decision of the Superior Courts, to which every case would be carried, illegal banking would go on as before. So the regular bankers, headed by Hon. J. Y. Scammon of the Marine Bank, determined to put an end to it by amending the banking law, so that it should not only authorize banks, but should prohibit under penalty, the prosecution of any banking business in the State which should interfere with the franchises granted to the regular banks under the banking law already passed. Accordingly the Legislature passed a prohibitory law against illegal banking, and supplementary to the banking law of 1851, whereby it was made little less than felony to do a banking business within the State, except under the provisions of the statutes. The law read as follows:

<sup>\*</sup> Hon. J. Young Scammon, president of the Marine Bank.

<sup>\*</sup> The Chicago Marine & Fire Insurance Company had been revived and was virtually under the same management as the Marine Bank. It was charged that the bank lent the insurance company at legal rates and that the insurance company put out the same money for its benefit at illegal rates.

An Act supplemental to and explanatory of an act entitled "An act to establish a general system of banking," and to prevent the

issuing and circulating of illegal currency.

SECTION I. Be it enacted by the people of the State of Illinois represented in the General Assembly, That the act to which this is supplementary shall be so construed that no person or persons shall become incorporated under the said act, until he, she or they shall have deposited with the Auditor United States or State stocks, as required by said act, so that the capital stock of said incorporation shall amount, in such United States stocks or State stocks, at the rate and value fixed by said act, to the sum of fifty thousand dollars; and at no period during the existence of said bank shall the capital stock of the same, in stocks deposited as aforesaid, be less

than the sum of fifty thousand dollars.

2. No bank, banking association, corporation, broker, banker, dealer in money, produce or foreign merchandise, or other person, shall emit, issue, utter, pay out, pass or receive in payment, or on deposit, any bill of credit, bond, promissory note, written instrument, or instrument partly written and partly printed, to be used as a general circulating medium, or in lieu of money, or other currency or intended by the makers thereof to be so used, other than the bills or notes of banks of this State, counter-signed in the Auditor's office, according to the provisions of the act to establish a general system of banking, or the notes or bills (of a denomination not less than five dollars), of specie paying banks, created by an express authority of law, in either of the United States, Territories, the District of Columbia or Canada. Every bank, banking association, corporation, broker, dealer in money, produce or foreign merchandise, or other person, who shall violate the provisions of this section, shall forfeit and pay to any person or persons, who may sue for the same, the sum of fifty dollars for each and every bill of credit, bond, promissory note, bill of exchange, order, draft, certificate of deposit, or other instrument so issued, uttered, paid out, passed or received, contrary to the provisions of this section, to be recovered in action of debt, before any justice, magistrate or court having jurisdiction to the amount claimed in any such suit.

3. In addition to the penalties provided for in the foregoing section, every broker, banker, dealer in money, produce or foreign merchandise, and every officer, agent or employé, of any bank, banking association, corporation, broker, banker, dealer in money, produce or foreign merchandise, who shall offend against the provisions of this act, shall, for every bill, bond, note, order, certificate of deposit, or other instrument or piece of paper emitted, issued, uttered, paid out, passed or received contrary to the pro-visions of this act, be liable to be indicted, and, on conviction, shall be imprisoned in the county jail not more than one year. It shall not be necessary in any indictment, suit or prosecution, under the provisions of this act, to specify or particularize any particular bill, note, bond, order, certificate of deposit, or other instrument, but it shall be sufficient to allege generally that the defendant or defendants have been guilty of violating the provisions of this act, by uttering, emitting, paying out, passing or receiving, as the case may be, any such bill, note, bond, order, certificate of deposit, or other instrument, of the character or description which, by this act, are forbidden, or prohibited to be issued, passed or received, and proof of such general nature shall be sufficient to sustain such

indictment, suit or prosecution.

4. Whenever it shall be represented to any one of the bank commissioners, upon the oath or affirmation of any credible person, setting forth the facts, or whenever, from any information, any one of the said commissioners shall have reason to believe that any bank, corporation, broker, banker, dealer in money, produce or foreign merchandise, shall have been guilty of any violations of the provisions of this act, it shall be the duty of said commissioner the provisions of this act, it shall be the duty of said commission forthwith to proceed to the said bank, or place of business of such bank, corporation, broker, banker, dealer in money, produce, or foreign merchandise, officer, clerk, agent or employé, and then and there to inquire, by the oaths of the said broker, banker, dealer, officer, clerk, agent or employé, or other testimony, whether the said bank corporation, broker banker, dealer in money, produce, or foreign merchandise, officer, clerk, agent or employe, have been guilty of any violation of this act. The said bank commissioner shall have full power and authority to issue subpenas and attachments to compel the attendance of witnesses before him, from any part of the State, and shall have power and authority to administer all oaths and affirmations to parties, witnesses, or others, required to be administered or taken by this act; and shall have power to compel such broker, banker, dealer in money, produce, or foreign merchandise, or any officer, clerk, agent, or toreign merchandise, or any officer, clerk, agent, or other employé, to answer all proper interrogatories propounded to him, her or them, touching any violation of the provisions of this act, and may commit any such person to jail, for refusal so to do, there to remain until such party consents to answer such interrogatory, or is otherwise discharged by due course of law. He shall reduce the said evidence and answers to writing and report the same to the other bank commissioners and also to the State's Attorney for the judicial court in which the said bank, or other corporation, or the place of business of any such broker, banker, dealer, officer, clerk, agent, or other employé, may be situated. And if the said commissioner shall be of the opinion that any such banker, broker, dealer, officer, agent, or employe has been guilty of any violation of the provisions of this act, he shall make complaint before some judge, justice of the peace, or other proper officer, and the said judge, justice of the peace, or other officer shall proceed against the person or persons named in other omeer shaft proceed against the person of persons mande in said complaint in all respects, as provided by the eighteenth division of chapter thirty of Revised Statutes, entitled "Criminal Jurisprudence;" and, for the purpose of compelling the witnesses to attend, may issue subprenas and attachments to any part of the State: Provided, that no answer made by any broker, banker, dealer in money, produce or foreign merchandisc, officer, clerk, agent, or employe, or any other person, upon any examination, made by or before any bank commissioner, judge, justice of the peace, or other officer, touching any violation of this act, shall be given in evidence against him, her, or them, on the trial of any indictment, suit or prosecution, for the recovery of any penalty of forfeiture imposed or provided for by this act, or in any other writ or legal proceeding whatsoever.

5. In case the bank commissioners, or a majority of them, shall be satisfied that any bank, corporation, broker, banker, dealer in money, produce, or foreign merchandise, or such officer, clerk, agent, or employé, has been guilty of any violation of the provisions of this act, they shall immediately apply to some judge of a Circuit or Supreme Court for a writ of injunction against such bank, corporation, broker, banker, dealer in money, produce, or foreign merchandise, such officer, clerk, agent, or employé, forbidding and restraining him or them from violating any of the provisions of this act; and such judge, after reasonable notice given to such bank, corporation, banker, broker, dealer in money, produce, or foreign merchandise, or such officer, clerk, agent or employe shall proceed, without delay, to investigate the questions involved in such application, and shall have power to compel the production of all books, papers, vouchers, and documents in the possession of the defendants, or cause and to require answers, on oath, from such defendant or defendants; which answer shall not be evidence on trial of any other action or suit in law or equity; and if upon such examination, he shall be of the opinion that any of the provisions of this act have been violated, he shall issue such writ of injunction and enforce the same, in case it shall be disregarded, according to the practice of the courts of chancery; and further proceedings shall be had upon such application in the Circuit Court of the county where the office, or place of business, of such bank, corporation, broker, banker, dealer, officer, clerk, agent, or employe may be situated, as may be necessary to enforce the provisions of this act. And if it shall be finally determined by the judge or court, be certified to the Auditor, which shall be sufficient authority to him, and he shall proceed to put the said bank into liquidation, in the manner contemplated by this act, and the act to which this is a supplement.

6. The bank commissoners to be appointed under the provisions of the act to which this is supplemented, before entering upon the duties of their office, shall take and subscribe an oath or affirmation, faithfully and impartially to perform all the duties enjoined upon and required to be performed by them, under the provisions of this act and the act to which this is a supplement, which said oath or affirmation shall be filed in the office of the Sec-

retary of State.

7. Every payment made, in whole or part, in any bill, note, bond, order, draft, certificate of deposit, or other instrument or paper, the passing, uttering, emitting, or use of which is prohibited by this act, shall be utterly null and void, and the persons or corporation to whom any such payment may have been made therein may sue and recover upon the original contract or cause of action, in the same manner and with like effect as if no such payment had been made.

8. No action shall be maintained in any court of this State upon any contract, expressed or implied, the consideration of which in whole or in part, shall be by any bill, note, check, draft, or other instrument or paper, the use, receipt, or emission of which is prohibited by this act, but the same shall be judged to be utterly

null and void.

In all prosecutions and suits for the recovery of penalties imposed for any violation of the provisions of this act, the persons suing for the same, (notwithstanding he may be liable for, or may have given bond for the costs of such penalties when recovered,) and the defendant or defendants shall be competent witnesses.

10. This act to be enforced and take effect from and after the first day of August next.

Approved February 10, 1853.

So soon as the foregoing act was passed, illegal

banking went out of sight in Illinois.

Smith's banking thereafter was legalized under a charter from the State of Wisconsin and became the Wisconsin Marine & Fire Insurance Company Bank; the deposit of bonds equivalent to the professed circulation of his Bank of America had legalized that, and he went on with his banking as before. If his currency

ran short he had only to buy some bank outside of the State, legally organized. He thus bought the Atlanta Bank of Georgia, the International Bank, Griffin, Ga., and others.

A reference to the sketches of the State banks will show the reader that the circulation furnished by them was, at its largest, but a small proportion of the capital invested by them, and that they gradually diminished

it until in 1856, the aggregate authorized circulation of all the Chicago State banks was only \$250,000, and of this sum it seldom occurred that it was all in circulation. amount was entirely inadequate for the business wants of the community. As the illegal issues had been suppressed, the bills of banks of other States, more particularly those of Georgia banks, gained a wide circulation. Many of them were owned or controlled by Chicago capitalists and were redeemable at the banking offices of their sponsors. Besides this there appeared the bills of many banks not guaranteed by any local banking firm, which were tolerated, though suspected of being of the wild-cat breed. In fact the currency was, so far as safety or reliability went, but little improved by the substitution of Georgia bills for the irregular issues of home bankers which had been suppressed. The character of circulating bills is shown by a list turned over by Oscar L. Caldwell, a conductor on the Burlington railroad, as taken by him during one trip in September, The whole amount was \$203, made up of the following: Five \$55 on Atlanta Bank, Georgia; eight \$55 and one \$10, on Interior Bank of Georgia; five \$55 and one \$10, on LaGrange Bank, Georgia; two \$5s on Michigan Insurance Company, Detroit; one \$1 on Marine Bank, Chicago; one \$5, one \$2, and one \$3 on State Bank of Illinois; one \$10 on Mahoning County Bank, Youngstown, Ohio; one \$1 on Dairyman's Bank, N. Y.; one \$3 on People's Bank, Wisconsin; one \$2 on City Bank, Racine, Wis.; one \$1 on Kenosha Bank, Wis.; one \$5 on Charter Oak Bank, Connecticut; one \$3 on Alton Bank, Illinois; one \$2 on Bank of Naperville, Illinois; one \$5 on Bank of Cumberland, Maine; one \$5 on State Bank of Indiana; one \$5 on Agricultural Bank, Tennessee; one \$5 on Luther Wright's Bank, Oswego, N. Y.; one \$5 on Bank of Virginia; one \$5 on Fire & Marine Insurance Company, Burlington, Iowa; one \$5 on Merchant's Bank, Macon, Ga.; one \$5 on Bank of Binghamton, New York; and one \$5 on Granville Bank, Granville, Ill. Of the \$203, Georgia banks furnished \$115; New York, \$11; Iowa, \$5; Virginia, \$5; Tennessee, \$5; Indiana, \$5; Wisconsin, \$6; Ohio, \$10; Michigan, \$10; Connecticut, \$5; Maine, \$5; Illinois country banks, \$20; Chicago city banks, \$1.

Although this list may not show the true proportion of the various issues in general circulation, it shows that under the banking law the State banks furnished but a tithe of the money in circulation, and that the stringent law passed in 1853 against irregular banking in the State had not been effectual

ICHIGAN WILDCAT MONEY.

in closing the gates against a flood of paper money from all quarters outside its jurisdiction. Of these the Georgia Bank bills gained the largest circulation, as many of them were made redeemable in Chicago in current bank bills. This forced the strong Illinois banks to keep their own circulation constantly fortified with an undue amount of specie for its redemption, and thereby rendered their circulation unprofitable to them however desirable it might be to the public. Any attempt to drive the better class of Georgia money out of circulation by gathering it up and demanding its redemption in current money in Chicago was sure to result in the gathering up of all current Chicago bank notes as an offset. To eradicate the one was to suppress the other, and the wild-cats still flourished. Banks which had depended solely on the profits arising from the circulation of their bills as money were many of them forced into liquidation, and others abandoned the business except that outside the issue of bills, which they continued to sturdily pursue. The statement of two of them on the first Monday of January, 1856, shows how strongly their circulation was fortified. On that date the Marine Bank reported a circulation of \$84,850, with specie on hand, \$90,000, and the Chicago Bank \$50,000 in circulation, and \$50,000 of specie on hand.

Several attempts were made to drive the Georgia money out of circulation by bringing it into popular discredit. In the fall of 1855 the railroads seriously discussed but never fully agreed to the measure of refusing all Georgia and Tennessee bills. December 27, 1855, a card appeared in the daily papers, addressed to the banks and bankers of Chicago, signed by one hundred and twenty merchants and firms, which read as

follows:

"The undersigned merchants and business men of this city respectfully solicit your aid in suppressing and driving out of circulation all Georgia and Tennessee money from our city and State, believing it highly injurious to the business interests of the community and unworthy of a longer credit. We hereby assure you that we heartily concur in the late movement of our prominent railroad companies against the issue of Georgia and Tennessee banks, and would urge the banks and bankers of this city to refuse receiving them on deposit on and after the 15th of January next."

The editor of the Democrat, commenting on the

above, said:

"So long as the bills of the sound Georgia banks are convertible into New York exchange at three-quarter per cent, and into gold at a rate no higher than one per cent, they will be freely taken by all business men."

In the Democratic Press of January 6, 1856, appeared, under the heading, "Georgia Banks Sustained," a counter card signed by one hundred and twenty-five

firms. It read:

"We the undersigned, persons engaged in business in the city of Chicago, having been familiar for years with its immense and rapid growth and unparalleled increase of business, and the every-day increasing demand for money to carry on the business so rapidly pouring in upon us, have observed with regret an effort on the part of some of our newspapers and brokers, as well as people at a distance, to discredit and render useless the currency upon which this city has mainly relied and used in the various transactions of business. If the general banking law of the State had been such that legitimate banking could have been done under it, or if it could be immediately so amended as to admit of such

successful banking, and thus supply a circulating medium at once for this city and State, the undersigned would have no objection to forcing out of circulation all foreign bills, or bills of other States. Since it is conceded that this banking law cannot be altered or amended until the State Constitution is amended, and since that cannot be effected under three or four years. there appears no remedy for the use of foreign bills. The undersigned therefore look upon any successful effort to discredit any circulating medium that is redeemed promptly where issued, as not only unwise but exceedingly mischievous to the general interests of the State and city and individuals, and it generally would most seriously effect the value of both personal and real property. The rate of interest money commands here s proof that we have too little rather than too much. The undersigned are decidedly opposed to the invidious distinction sought to be made by some of our newspapers and brokers against the issues of the banks of the State of Georgia, the bills of which we have become familiar with, the owners of which we have become acquainted with, and the security of many of which we are perfectly satisfied with. The fact that two of the Georgia banks have stood a continuous run for four months or more, and have redeemed a half million per month of their issue in gold and silver, have increased our confidence in these banks, and the ability and disposition of the stockholders to promptly redeem all their issues. We shall therefore continue to receive and pay out, use and give credit to Georgia money, the same as the bills of other States, so long as they are redeemed in specie at the banks where issued, and we advise others who are engaged in business to do the same, until a full remedy can be had by amending our own banking law.'

The Marine Bank, and the banking house of R. K. Swift, advertised on January 16, 1856, that they would no longer receive on deposit Georgia or Tennessee bank bills. In the same paper, Preston & Co., bankers, advertised that they were partial stockholders of the Planter's and Mechanic's Bank, Dalton, Georgia, were liable for its issues, and that its notes would be received by them, the same as Illinois, Wisconsin, Onio, and other Western currency. Smith redeemed the issues of the Atlanta Bank, the International Bank, and others in

which he was interested.

It does not appear that the Southern banks having reliable fiscal agencies at Chicago were much restricted in their general circulation by the partially successful effort to discredit them. They continued as a part of the circulating medium, in spite of all the local opposition until extraneous circumstances destroyed the entire system of State banking throughout the land.

The history of legitimate banking in Illinois or Chicago after 1853 was uneventful until 1856. The panic of that year brought the banks of Illinois in common with those of the whole country, to the severest test. It is truth to say that the Chicago banks stood the test well. Some of them failed, some went into voluntary liquidation, and a few weathered the storm and continued to do business until they were superseded by the National Banks in 1863–64. Of changes subsequent to 1857 this history will treat hereafter. The following is a sketch of each bank doing business in Chicago and recognized under the laws of the State from 1851 to

THE MARINE BANK OF CHICAGO.—Chartered January 13, 1852. Officers, J. Young Scammon, president; Edward I. Tinkham, cashier. Capital \$50,000—increased, May 20, 1852, by \$500,000. Paid in, \$150,000.

Circulation of \$99.044, secured, by Auditor's report of November 20, 1852, by Virginia six per cent bonds, valued at par, \$30,000; Illinois State bonds and Illinois & Michigan Canal securities amounting to \$142,398.14, valued at \$69,052.23. In 1854 its circulation had increased to \$158,901, to secure which it had deposited \$42,000 of Virginia bonds and \$244,623.40 of Illinois State and canal bonds, having a market value of \$128,-303.85. In 1856, its circulation had been reduced to \$100,705. Its securities were: \$9,000 of Missouri bonds and \$198,705.15 of State bonds of Illinois, valued at \$100,705.73. November 30, 1858, the circulation had been reduced to \$50,000, for the redemption of which there were deposited with the State Auditor, \$47,276 Illinois New Internal Improvement bonds, valued at \$1.05, and \$12,000 Illinois interest bonds valued at \$0.96. November, 1860, the amount of the circulation remained unchanged \$50,000, secured by Illinois State bonds valued at \$53,098. Its charter expired in 1877, at which time it went out as a solvent bank.

BANK OF AMERICA.—This was a proprietary bank, owned by George Smith and Elisha Willard George Smith & Co.) Chartered July 19, 1852; capital, \$1,000,000; paid in, \$50,000. Circulation, November, 1852, \$50,000, secured by deposit with the State Auditor of \$10,000 Pacific Railroad bonds of the State of Missouri, valued at fity cents on the dollar, and \$6,501.87 of canal certificates, valued at thirty-three cents on the dollar. For the succeeding four years the amount of circulation and the securities deposited remained unchanged. In November, 1859, the circulation had been reduced to \$1,162, for the security of which \$2,000 of

Missouri sixes were deposited.

The Bank of Commerce was owned by Davisson, McCalla & Co.; incorporated in May, 1852. Capital, \$260,000; paid in, \$52,000. Officers, Alfred W. Davisson, president; Thomas McCalla, cashier. Its first circulation amounted to \$50,000, to secure which were deposited July 24, 1852, \$35,000 of Missouri State bonds, \$10,000 of Kentucky State bonds, and \$5,000 of Ohio canal bonds. November, 1854, the circulation had increased \$4,998, and \$5,000 additional Kentucky State bonds had been deposited for security. In the Auditor's report for 1858, its name appears among the suspended banks. Its final showing in the Auditor's report of 1860 speaks well for the Illinois banking law, under which the bank had been organized and its bills issued. It was as follows:

1858. Sept. 18, Sept. 28,	To amount of stock deposited	Dr. \$2,005 00 2,089 00	0
1858. Sept. 28,	By amount of notes in circulation	\$4,094 00 Cr. \$2,005 00	
Nov. 30, Nov. 30,	By amount of notes redeemed	522 00 5 00 1,562 00 \$4,094 00	0

THE CITY BANK was a proprietary bank owned by Messrs. Bradley & Curtiss; chartered June 26, 1852; capital, \$200,000. Its place of business was No. 24 Clark Street. Amount of circulation, November, 1852, \$59,994, which was secured by deposits of \$60,000 in Virginia State bonds, valued at par. In 1854 the circulation had diminished \$10,000. November, 1856, the Auditor reported a circulation outstanding of \$1,539, against which was held \$1,537.40 in specie. The bank

went into involuntary liquidation, being "closed by protest."

The Chicago Bank was owned by I. H. Burch & Co., the firm being Isaac Howe Burch and Samuel Howe. President, Thomas Burch; cashier, I. H. Burch. Incorporated July, 1852; capital, \$100,000; paid in, \$50,501.29. Circulation in November, 1852, was \$53,997, secured by deposit with the State Auditor of \$10,000 in Missouri State bonds and \$77,501.57 in canal securities. In November, 1856, the circulation was \$50,000, secured by \$8,000 in Virginia sixes and \$86,000 in Illinois and canal bonds. In November, 1860, the amount of circulation had been reduced to \$4,903 (2,281 ones, 1,060 twos, 94 threes, and 43 fives), to redeem which the State Auditor held \$5,454 of Illinois State bonds.

The Exchange Bank was owned by Messrs. H. A. Tucker & Co.; organized in January, 1853. Officers: President, H. A. Tucker; cashier, Hamilton B. Dox. Capital unknown. Place of business, 34 Clark Street. The circulation in 1854 was \$49,995; security deposited, \$50,000 in Missouri State bonds. In 1856, the circulation had been withdrawn. At that time there was only \$675 outstanding, for which the Auditor held \$675 in

specie.

The Union Bank was owned largely by Forrest Bros. & Co. It was organized August 18, 1852; capital, \$200,000; paid in, \$50,000. The circulation was, in October, 1852, \$49,995, secured by \$50,000 of Virginia sixes. This bank was "closed by protest" in 1856. At the closing up of its business in 1857 there was of its bills outstanding \$1,611, of which amount there was subsequently redeemed \$78. Lost, \$1,533.

The Farmer's Bank was organized December 25,

THE FARMER'S BANK was organized December 25, 1853, by Messrs. Chase Bros. & Co. Its circulation was secured by \$50,000 Missouri State bonds. It was forced into liquidation in 1854. The bonds proved ample to

redeem its circulation.

The Phenix Bank was organized in 1854. It had a circulation of \$50,000, secured by \$50,000 in Missouri State bonds. It was forced into liquidation in 1855. In November, 1856, the Auditor reported of its bills outstanding, \$415, to redeem which he held a deposit of \$413.40 in specie. The bank was owned by N. C. Roe

& Co., 42 Clark Street.

MERCHANTS' AND MECHANICS' BANK was organized in February, 1852. Officers: President, Levi Boone; cashier, Stephen Bronson. Capital, \$100,000. The circulation, in 1853 was \$54,700, for which it had pledged to the State Auditor \$50,000 in Virginia sixes and \$10,000 in canal bonds. In 1854 its circulation had increased to \$58,700, with a corresponding increase of securities in canal bonds. The bank closed business in 1856. The Auditor's report in the fall of that year showed \$2,068 of bills still outstanding, with a deposit of a like amount of specie.

Whatever of disaster may have befallen these banks, it will be seen that no material loss ever came upon the holders of their bills. The financial storms of 1856 forced some of them to close up business, but the law under which they had been organized grew in favor with the people until the unexpected contingencies which grew out of the civil war in 1861 destroyed the basis on which banking had been done, and, shortly after, forced an abandonment of banking under State laws altogether, and the law was repealed.

OTHER FINANCIAL INSTITUTIONS.—In addition to the banks of issue which flourished during the period subsequent to the passage of the State banking law of 1851, there were several stanch financial institutions

worthy of mention. The Butchers and Drovers' Bank was the only bank on the North Side. It issued no bills, but did a thriving business. It was located at the corner of North Water and North Clark streets.

The METROPOLITAN BANK was also a bank of de-

posit, owned and run by Gurley & Farlin.

"SWIFT'S BANK," the proprietors of which were R. K. Swift, Lyman P. Swift, and J. S. Johnson, did a very extensive business at the corner of Randolph and La Salle streets.

The leading savings banks were: The Chicago Savings Bank, 125 Lake Street; Dollar Savings Bank, 22 Clark Street; Marine Savings Bank (a department of the Marine Company); and the Dime Savings Bank.

The Illinois Saving Institution, which for many years was regarded as being undoubtedly secure, was organized in 1855-6. Its first president was John H. Kinzie. He was succeeded in 1859 by John C. Haines. George E. Stanton was its vice-president, and Nathan B. Kidder its cashier. Among its permanent trustees were: John H. Kinzie, Gurdon S. Hubbard, Erastus S. Williams, Alexander C. Coventry, William B. Ogden, George W. Dole, Benjamin W. Raymond, John S. Reed, O. R. W. Lull, George E. Stanton, and Nathan B. Kidder. Serving as directors for brief periods were: John H. Dunham, Henry Witbeck, John C. Haines, and Conrad L. Deihl.

In 1857 was organized the Merchants' Savings, Loan and Trust Company, the only financial institution now in existence, under its old name, organized prior to 1858. It office was at the corner of Water and La-Salle streets. It capital was \$500,000. Its first president was J. H. Dunham, and its first vice-president Walter L. Newberry. D. R. Holt was its first permanent cashier, although before him M. B. Bartlett had served as cashier and secretary pro tem. The directors, prior to 1861, were: John H. Foster, 1857-61; Jonathan Burr, 1857-61; W. L. Newberry, 1857-61; D. R. Holt, 1857-61; William E. Doggett, 1857-61; Henry Farnam, 1857-61; I. N. Arnold, 1857-61; A. H. Burley, 1857-61; J. H. Dunham, 1857-61; William B. Ogden, 1857–58; George Steel, 1857–58; M. D. Ogden, 1858– 61; S. A. Smith, 1858–61; C. H. McCormick, 1858–61.

The Western World Insurance and Trust Company, 142 and 144 South Water Street, was chartered in 1853. Its authorized capital was \$500,000, of which it issued \$250,000, the par value of its shares being \$50. George H. Hazelton was its first president, and Charles H. Abbott its first cashier. He subsequently became the treasurer of the company, and Alfred Edwards succeeded him as cashier. The early directors were: O. Kendall, George H. Hazelton, Amzi Benedict, L. S. Church, and

Charles H. Abbott.

The Chicago Marine & Fire Insurance Company was first chartered in 1836 by Theophilus W. Smith and others. It did a banking business to the extent of any private bank or banker not issuing currency. It ceased to do business in 1839 or 1840, but did not thereby forfeit or resign its charter. In 1848, its stock having passed into other hands, its business, under the old charter, was revived.\* It commenced with a nominal capital of \$35,000, and an actual cash capital of \$25,000. J. Young Scammon was the largest stockholder, the president, and managing head of the institution, and so remained, with the exception of three years while he was abroad, until it finally closed up business in 1874. Until 1857 its career was that of unprecedented success. It had at that time extended its business more widely

than any like institution in the West, had an actual cash capital of half a million dollars, and was the largest moneyed institution in the State. The Marine Bank. chartered in 1852, was owned by the same stockholders and was under the same management. In 1857 Mr. Scammon retired from the active management of both institutions and visited Europe, where he remained about three years. At the time of his departure the joint capital of the two concerns was \$1,050,000. Under the new management a train of misfortunes befell the company, which seriously depleted its financial strength and impaired its credit. Mr. Scammon on his return resumed the management, and it again regained its credit and prestige, which it held until the great fire of 1871. This disaster followed, before recuperation was possible, by the financial disaster of 1873, rendered it necessary to permanently close its business, which was done in the winter of 1874 or spring of 1875

The bankers and banks of Chicago which survived the panic of 1856, and appeared as doing business in 1857, were given in the directory of that year, with the time they had done business in the city, as follows:

F. Granger Adams, 44 Clark Street, forty-seven

years in city.

J. M. Adsit, 39 Clark Street, ten years in the city. Brewster, Hoyt & Co., 24 Clark Street, nine months in the city.

1. H. Burch & Co., 123-125 Lake Street, twelve years in the city.

Davisson, McCalla & Co. (Bank of Commerce), 128 Lake Street, corner of Clark.

John Denniston, money broker, 111 Lake Street, eight years in the city.

Evans, Whipple & French, money brokers, 48 Ran-

dolph Street, four months in the city. Gurley & Farlin (Metropolitan Bank), 48 LaSalle

Street-Joel Gurley and D. H. Farlin.

Hoffman & Gelpecke, 58 LaSalle Street, two years in the city.

E. H. Huntington & Co., 34 Clark Street, two years in the city.

Morford Bros. (R. H. Morford), 32 Clark Street,

one year in the city. Officer & Brother (R. W. & S. P. Officer), 154 Lake

Street, one year and three months in the city Charles G. E. Prussing, 40 Clark Street, eleven years

in the city.

Daniel Richards, 29 Randolph Street.

Strong & Wiley, 141 Randolph Street D. C. Strong and C. V. Wiley), six months in the city.

H. A. Tucker & Co. (Exchange Bank), H. A. Tucker, president; Hamilton B. Dox, cashier, four years in the city.

Wadsworth & Hitz (Strong Wadsworth and Louis J. Hitz), 66 Clark Street.

R. K. Swift, Brother & Johnson, northwest corner of Randolph and LaSalle streets, three years in the city.

E. I. Tinkham & Co., 34 Clark Street, two years in the city.

Wheeler, Bunker & Co., 65 Clark Street George H. Wheeler, New York, Edward H. Bunker, Chicago, nine months in the city.

G. C. Whitney & Son (G. C. and C. H. Whitney, 36 Clark Street, one and one-half years in the city.

Bank of America, George Smith & Co., proprietors,

41 Clark Street.

Bank of Commerce (Commercial Bank), Davisson, McCalla & Co., proprietors, northwest corner of Lake and Clark streets.

<sup>\*</sup> See on previous pages of bank history, and biography of Hon. J. Y. Scammon.

Chicago Bank (I. H. Burch & Co.), corner of Lake and Clark streets.

Exchange Bank (H. A. Tucker & Co.), 34 Clark Street.

Marine Bank & Chicago Marine Insurance Company incorporated in 1836), 154 Lake Street, twenty

years in the city. J. Young Scammon, president; Benjamin F. Carver, cashier.

State Bank, 55 Clark Street, William B. Rogers,

house 103 Adams Street.

It is appropriate to close this chapter with a biographical sketch of one who filled an important place

in the banking history of that period.

J. Young Scammon was born in Whitfield, Lincoln Co., Maine, July 27, 1812.

His father, Hon. Eliakim Scammon, was an early settler and a long resident of East Pittston, Kennebec Co., Maine. He was a man widely known and esteemed and represented his town and county in both branches of the State Legislature. His mother was the daughter of David Young, who was a wealthy man of affairs, and had represented the town of Pittston, District of Maine, where he resided, in the General Court of Massachusetts, before the separation of Maine from Massachusetts.

The subject of this sketch was bred on a farm, and would quite likely have followed the vocation of a farmer, had not an accident, which occurred when he was a youth of ten years, deprived him of the full use of his left hand.

Subsequent to the accident he pursued his studies with a view to following a profession. He received an academic education at the Maine Wesleyan Seminary, Kent's Hill, Readfield, and Lincoln Academy, New Castle, Maine. He entered Waterville College (now Colby University) in the class of 1831. He received the degree of LL. D. from that institution in 1865. After leaving college he studied law in Hallowell, Maine, in the office of Hon. John Otis. Having completed his legal studies he was admitted to the Bar in Kennebec County, and immediately after started on a tour of observation with a view to settlement West. He arrived in Chicago September, 1835, after a tempestuous and dangerous passage, on the steamboat "Pennsylvania," at that time plying between Buffalo and other Lake Erie ports, and occasionally making the round trip to Chicago, via Green Bay. The steamer anchored outside the bar, and the passengers, Scammon among them, were landed in a skiff or yawl under the south end of a bridge which crossed Dearborn Street, from whence they made their way, through the tall prairie grass, across what is now the heart of the city, to the Sauganash Hotel, then located on Market Street, near Lake.

Through letters to Mr. Henry Moore, then an attorney of the town and Deputy Clerk of the Cook County Circuit Court, under Colonel Richard J. Hamilton, who then held most of the offices in the county, he made the acquaintance of the latter gentleman. The Circuit Court commenced its session not long after Scammon's arrival, and, on the solicitation of Mr. Moore, whose private business prevented his further service as Deputy Clerk, he consented to remain temporarily and fill the position during the session of the court. Thus Mr. Scammon began active life in Chicago in 1835, in the

WISCONSIN WILDCAT MONEY.

office of the Circuit Court of Cook County. His services were appreciated by Colonel Hamilton. He was subsequently appointed Deputy Clerk, in place of Moore, who resigned his claim to the official position, and was allowed to open an office as an attorney at law in the somewhat contracted precincts of one corner of the Clerk's office, having been admitted to the Bar of Illinois December 7, 1835. The young lawver grew rapidly into favor, and filled, during the succeeding two years, many offices of trust and responsibility under Colonel Hamilton, who was then Clerk of the Circuit Court, Clerk of the County Commissioner's Court, School Commissioner, Recorder of Deeds, notary public, and bank commissioner. He continued studiously to apply himself to the duties of his profession. December 5, 1836, he entered into a copartnership for the practice of law with Buckner S. Morris. The firm had a successful and increasing practice for eighteen months, when it was dissolved. For a year after the dissolution Mr. Scammon practiced alone. In 1839 he again entered into a copartnership with Norman B. Judd. The firm existed until 1847, and, during its continuance, ranked as one of the strongest and most reliable legal firms in the Northwest. Mr. Scammon, up to this time, had devoted his energies and attention assiduously to his profession and had attained the foremost rank as a practitioner in Cook County and throughout the State of Illinois. Subsequently, in 1849, he entered into a law partnership with Ezra B. McCagg, who had previously been his confidential law This copartnership remained unbroken until 1856, when Mr. McCagg went to Europe, and Mr. Samuel W. Fuller assumed charge of the law office, and conducted the business under the name of Scammon & Fuller. Mr. McCagg, returning home in 1857, and entering into the active business of the office, the name of the firm became Scammon, McCagg & Fuller, and so remained until after the great fire of 1871.

From the dissolution of the partnership with Mr. Judd, although continuing to practice and to be retained in many important suits, he became more identified with the public affairs of the commonwealth, and more engrossed in private business. His dissolution of that copartnership was consummated on account of his interest in railroad matters, which largely absorbed his attention at that time, he being then one of the projectors and builders of the Galena & Chicago Union Railroad.\* In 1837, while known exclusively as a lawyer, he was, without solicitation on his part, appointed attorney of the State Bank of Illinois. He also held the position of reporter of the Supreme Court of Illinois from 1839 to 1845, during which time the Court Reports were published in a style of excellence hitherto unknown in the West, and not inferior to like publica-

Subsequent to 1857 Mr. Scammon became so prominently engaged in the business interests of Chicago and the State as to overshadow for years the well-earned and merited prominence which he had attained in his profession. He was identified with the earliest efforts to establish the common-school system in Chicago, being appointed one of the school inspectors in 1839, and remained a member of the school board until 1845, † when he was nominated as an Alderman from

1839, and remained a member of the school board until 1845,† when he was nominated as an Alderman from the First Ward. His candidacy was opposed by some on account of his "building hig school-houses," as it was expressed, he being the strong advocate of expenditures for school purposes, considered at that

tions in the Eastern States.

time prodigal in the extreme, and far beyond the present or prospective wants of the city. He was elected by a most flattering vote, and in his new office helped to lay the broad foundations of the present magnificent

school system of the city.

Mr. Scammon was, however, more strictly identified with the financial institutions of the State than with any other department of its material progress. He had, by the knowledge gained through his legal connection with banks as an attorney, become an expert in all the details of the various theories of banking then in vogue, and, naturally, his attention became directed to that business. The amended Constitution of 1848 permitted the general banking law of 1851 to be passed. He was, at the time the law passed, the president and leading stockholder of the Chicago Marine & Fire Insurance Company, an institution performing all the functions of a bank, except that of issuing currency. Soon after the passage of the act and its adoption by popular vote, he established, under its provisions, the first institution under the general law called the Marine Bank. His bank was considered the strongest and most reliable of the State banks established under the law, and under his direction was so conducted as to not only vindicate the law, but bring it into especial favor throughout the State, where a strong prejudice had previously prevailed against banks, and especially against State banking.\* He became the open and fearless antagonist of all who sought to evade the banking law. The illegal or irregular bankers were indicted in January, 1853, under a law then recently enacted, which drove illegal banking from the city and State, or forced it to seek cover under the ægis of law. This act was framed by him, and passed through his advisement.

In 1857, having accumulated an ample fortune, he decided to temporarily retire from active business and to take a rest, after his arduous and successful career of nearly a quarter of a century. He accordingly sailed for Europe where he remained for about three years. On his return in 1860, and finding that through mismanagement or misfortune, or both, the Chicago Marine & Fire Insurance Company, which he had left the strongest institution of its kind in the West, was on the verge of bankruptcy, he immediately re-assumed its personal management and plunged anew with his accustomed energy into the vortex of Chicago business of which this great monetary institution was the center. Success crowned his efforts, as always before. The institution regained its former prestige, as the leading monetary institution of the city, and so remained, under his management, until the destruction of the Illinois currency, in consequence of the depreciation of Southern State stocks, upon which it was in part based, compelled a general suspension of banks which had received and held that currency on deposit. Mr. Scammon then opened a private bank, settled up the affairs of the old institution, and re-organized it, and made it again a prosperous institution until the destruction of the city by fire in October, 1871. The enormous and unexpected losses then incurred, followed by the business panic of 1873, rendered it expedient to wind up its affairs, and it ceased business in 1874.

In things temporal, the tide which "taken at its flood leads on to fortune," oftentimes at its ebb, leaves the hitherto fortunate mortal stranded on the shore among the wrecks of his former possessions. From causes over which Mr. Scammon had little control, disaster in worldly affairs became his lot, against which

penditures for school purp.

 $<sup>^{\</sup>bullet}$  Mr. Scammon's connection with the banking of the city further appears in the topical history of banking.

he struggled with such energy, determination, fortitude and philosophy as evinced a type of character more exalted and more worthy of emulation than is often evolved from a life of uninterrupted success. At the time of the great fire Mr. Scammon was possessed of a vast fortune, was a banker of the highest standing both as to executive ability and commercial integrity, and was possessed of almost unlimited financial credit throughout the country. As a lawyer he stood in the front rank, and as a man of affairs in the great public enterprises which concerned the welfare and prosperity of the city and State, he ranked as one of the foremost.

Full half a million dollars of his property vanished in the smoke and flames of the great conflagration. His banks, his warehouses, his stores, and his home, all

disappeared in the general ruin.

But his courage remained undaunted, and his credit unimpaired. He immediately set about the task of rebuilding, with his full share of that wonderful delirium of energy which characterized the renovation of the destroyed city. In fifteen months he expended more than one million dollars in rebuilding the new Chicago. Much of the capital required was necessarily borrowed, either on the personal credit of Mr. Scammon or on such collateral security as his property, remaining after the fire, enabled him to offer. The panic of 1873 depreciated the value of his securities, although it did not decrease the amount of his debts, and his monetary credit became so impaired as to leave him hopelessly involved. Out of the wreck something may be saved to him who builded the ship, but, perhaps, nothing beyond what would be required to earn the same anew.

Losing his fortune, Mr. Scammon still retained all of himself that is imperishable, and has since that time borne himself as a Christian philosopher and as a true man should. His reputation, save that ephemeral form which is measured by dollars and re-acts on itself when the dollars vanish, is unsullied. He is (1884) engaged in practice as a lawyer in Chicago, taking little part in

public affairs outside the duties of his profession.

The active years of his life identified him with nearly every branch of Chicago development. He was the first professed receiver in northern Illinois of the doctrines contained in the religious writings of Emanuel Swedenborg, and organized the first "Church of the New Jerusalem" west of the lakes. He was the first homeopath in Chicago. He was also one of the first organizers and directors of the Chicago & Galena Railroad, and the acknowledged leader in the State bank reform of 1851, being the managing head of one of the first banks organized under its provisions. Although engrossed in business, he ever took an active interest in politics. He, however, was never an office-seeker or an office-holder in a political sense, though the Whig candidate for Corngess in the Chicago District in 1848, and was elected and served as a member of the State Assembly in 1860-61. In politics he was formerly a stanch Whig, and, on the disintegration of the party became, and has since continued, an unswerving Republican. In the interest of that party he established the Inter-Ocean\* in 1872.

This sketch, treating of the public and civil life of Mr. Scammon, although giving the reader an idea of the many paths of usefulness through which he won the gratitude and respect of his fellow-citizens, does not touch upon the deeper and broader traits of his character, which are known only to such as have been drawn to him within his Church, his large circle of personal friends, and his family. The inner and better life of a

\* See History of Chicago Journalism in later volume.

true man is seldom written. It is more fitting that it be engraved in the hearts and cherished in the memories of those whose lives have been intimately interwoven with his own.

While in affluent circumstances his public as well as private benefactions were bountiful to the full measure of his ability. The Hahnemann Homeopathic Society received from him as a free gift a commodious hospital. The Chicago Astronomical Society and the Dearborn Observatory owe their existence mainly to Mr. Scammon. He was elected the first president of the Society, built, at a cost of \$30,000, the Observatory, and paid the salary of its director until the fire of 1871. On his retirement from the presidency of the Society in 1882, the following was placed on the records:

"The Hon. John Young Scammon having resigned the office of President of the Chicago Astronomical Society, which office he has held from the organization of the Society in 1862 to the present time, the directors take this occasion to express their sense of obligation for his untiring interest in the success of the Dearborn Observatory, and for the munificent benefactions he

has bestowed upon it.

"It is to Mr. Scammon that the Society is indebted for the tower of the Observatory, which he furnished the means to erect at a cost of \$30,000.

"Mr. Scammon also made a generous contribution toward the purchase of the Great Refractor, and, in the early history of the Society, the salary of the director was for a considerable period paid entirely by the same liberal hand.

"Whenever a history of Chicago shall be written in which justice shall be done to those who have made our city what it is, then will the name of J. Y. Scammon be found to occupy an honored place in the records of those whose benefactions have contributed most to the growth and prosperity of the city and its institutions.'

Mr. Scammon was married in Bath, Me., July -1837, to Miss Mary Ann Haven Dearborn. They had four children, two of whom survive. One daughter

died in infancy.

Charles Trufant was born July 7, 1840. His youth was spent in Chicago. He was graduated from the Chicago University and soon after entered the service as a Lieutenant in the Ninth Illinois Cavalry. He was subsequently appointed on the staff of General Steele, and served through the war, bearing himself as a true and brave soldier throughout. At the close of the war he commenced the study of law in the office of that eminent lawyer and statesman, Hon. George Evans, Portland, Me. In 1869, having completed his legal studies and been admitted to the Bar, he entered into a copartnership with Robert T. Lincoln, who had been a law student in the office of Scammon, McCagg & Fuller. The career of the promising young firm was cut short by the failing health and early death of young Scammon. He died August 23, 1876.

Of the two surviving daughters, Florence A. D. (now Mrs. J. S. Reed) was born in Chicago November 12, 1844. She now resides in South Carolina. Evans Scammon was born April 2, 1848, and is now a resident of New York City. Mrs. Scammon died at Soden, Nassau, Germany, ten miles from Frankfurt-onthe-Main, July 9, 1858, where she was buried, and over her remains rests an appropriate marble monument.

On December 5, 1867, Mr. Scammon married Mrs. Maria Sheldon Wright.

WILLIAM H. BROWN was born in Connecticut about 1795. His father was a native of Rhode Island and by profession a lawyer. He practiced for twenty-five years in Auburn, N. Y., and toward the end of his life removed to New York City. Young Brown studied law with his father, with whom he also practiced for a short time, and then removed to Illinois Territory, where he was licensed to practice September 28, 1817. He took up his residence in Kaskaskia as early as December, 1818, and in the spring of 1819 was appointed Clerk of the United States Court for Illinois, a position he held until 1835. On the change of the State capital in 1820, he removed to Vandalia, where he purchased a half interest in "The Illinois Intelligencer," established in 1815, and the first newspaper published in Illinois, of which he became the editor. In December, 1822, he married Harriet C., daughter of Colonel John Seward, of Montgomery County, Ill.

In February, 1823, the pro-slavery faction in the Legislature by the high handed methods, which became historic, secured the passage of a resolution submitting to the people a call for a constitutional convention, the covert purpose of which was to legalize slavery in the State. Mr. Brown's partner in the Intelligencer was William Berry, a pro-slavery member of the Legislature; and at this critical juncture in presence of so well defined an issue, their views could not well be harmonized. Mr. Brown's interest was bought out, but before the close of the year the paper, in other hands, was again brought under the influence of free principles, and for eight months before the general election did good service in securing the memorable victory for freedom of August 2, 1824. In that contest Mr. Brown was one of the working force which revolutionized the public opinion of the State in that pivotal epoch of its history.

In October, 1835, he removed to Chicago, having been appointed cashier of the branch of the State Bank which was to be established here. December 5, 1835, he formally announced the names of the officers of the bank, which thereupon became an institution of the ambitious and speculating town. In 1836 Mr. Brown gave evidence of taste and wealth by building a ten thousand dollar residence on the northwest corner of

Pine and Illinois streets.

In 1840 he was elected School Agent by a majority of one, on the Whig ticket, having offered to serve without salary. For thirteen years he filled that office with marked efficiency and general acceptance. In that relation, and as one of the Board of Inspectors he contributed largely to the increasing success of the schools

of Chicago. December 8, 1840, he delivered a lecture before the Lyceum on "The Early History of Illinois;" and January 20, 1842, one on "The Social and Legal Rights of Women."

In 1845 Mr. Brown formed a partnership with Alfred Cowles, a lawyer, and in 1846 he was one of the syndicate who bought the charter of the Galena & Chicago Union Railroad from the estate of E. K. Hubbard, deceased. In 1857 he built a more costly residence than before on Michigan Avenue, keeping well to the front in that class of expenditure by an outlay of \$30,000.

In 1860 he was nominated for the State Legislature by the Republicans, and worked hard for the success of the party in the State and Nation. He was elected and acquitted himself with credit in that position, being especially marked for his zeal in the support of the national administration throughout the Civil War. December 5, 1864, he delivered a lecture before the Chicago Historical Society, of which he had been the first president, 1856 to 1863, on the "Early Movement in Illinois for the Legalization of Slavery."

At the close of the war, Mr. Brown retired from active business pursuits; and, in 1866, accompanied by Mrs. Brown, he went to Europe, partly for recreation and partly in the hope of recruiting his failing health. In Amsterdam he was taken ill with small-pox, and while convalescing was struck with paralysis, of which he died June 17, 1867. All his children, four sons and one daughter, with their mother, survived to mourn his loss, surrounded by the regret and respect of the whole

community.

On three critical occasions in the life of the State, the city, and the Nation, respectively, Mr. Brown was not only on the right, but also the victorious side; and he has deservedly taken high rank among his fellow-citizens as a philanthropist, a friend of education and a patriot. The public cannot minutely discriminate between good fortune and victorious choice; and, if it could, there is no doubt that Mr. Brown would be entitled to its applause on the higher ground. Intellectually, he was not great, but his talents were respectable; and though perhaps opinionated and stubborn, as the wont of successful men, he was esteemed for his kindness of heart by those who knew him best.\*

<sup>\*</sup> If a more extended analysis of Mr. Brown's character be thought desirable, see Dr. Patterson's tribute to his memory.—Fergus 6, p. xi., etc.

# TRADE, COMMERCE AND MANUFACTURES.

## PRIMITIVE PERIOD-1833 TO 1848.

Chicago has now the largest trade and the most extended commerce of any inland city in the world. It is the most important primary market in the world for cereals, live stock, and all their manufactured products,

such as flour, pork, lard, beef, tallow, etc.

The commerce of Chicago began quite early, as the reader well knows who has read the history of the American Fur Company and the Government Factories, both of which had agencies there at a very early time in its history. Chicago had nothing to export, except furs and peltry, until 1833. Up to that time there were no products of husbandry raised west of Lake Michigan in sufficient quantity to more than supply the wants of the resident people. The records prior to that date showed that each vessel which arrived at the port of Chicago brought passengers and provisions, and took little back. Indeed, the balance of trade was most sadly against the port. When the first modern merchants established themselves in Chicago, they did not look for any profit from an export trade, but entirely from the sale of goods brought from the East. Among them were flour, wheat (for seed), beef, pork, and nearly

all the ordinary necessities of life.

It is stated by Judge Caton that, as late as 1836, during the fall, an actual scarcity of provisions prevailed, and quite a panic set in among the inhabitants. Some of the merchants—all, in fact, but George W. Dole—put up the price of flour, of which they held but small stocks, to the exorbitant price of \$28 per barrel. Mr. Dole, who held the largest stock, not only refused to take an interest in this first "Chicago corner," but actually broke it by refusing to sell to these extortionate dealers, while he, himself, continued to sell at retail, at the old price of \$11, until further supplies arrived.

From 1832 to 1838 the incoming settlers consumed nearly all the products of those who had come before them. Those who had raised crops in 1833 found a ready market for their surplus among the comers of 1834, who, in turn, found an equally urgent demand for their products in the increasing throng of emigrants of the succeeding year. The early trade and traffic in furs, or the correlative barter of goods in exchange for them, could hardly be classed even as the beginning of Chicago commerce. The Factory at Chicago and the agents of the American Fur Company show in their records all that will ever be known of early Chicago commerce. The vast commerce of the city to-day has no connection with 't whatever. The Indian trade was virtually extinct before the American commerce which now centers at Chicago had begun. Only a single man Gurdon S. Hubbard became identified with the modern commerce and trade of the city, who had been connected with the rude Indian traffic which centered in Chicago in the earlier times.

The beginning of what is now the vast trade and commerce of Chicago dates back to the spring of 1833, at which time the first invoice of what might be termed the first products of civilized industry was shipped from

the port of Chicago to an Eastern market. The slaughtering of cattle and swine seems to have furnished the first surplus products for export. The early history of that branch of industry has been told elsewhere. George W. Dole made the first shipment of beef in barrels in the spring of 1833, which is believed to be the first consignment of Western products to Eastern markets, excepting furs, peltry, and hides, ever shipped as a commercial venture from Chicago. The bill of lading read as follows:

"SHIPPED IN GOOD ORDER and well conditioned by Newberry & Dole, on board the schooner called 'Napoleon, whereof is master for the present voyage John Stewart, now lying in the

port of Chicago, and bound for Detroit.-To say:

O. Newberry, Detroit: 287 barrels beef.

14 " tallow. 2 " bees-wax—11534, 94½, 210¼.

152 dry hides, weighing 4659 pounds.
"Being marked and numbered as in the margin, and to be delivered at the port of Detroit in like good order, (the dangers of the lakes and rivers to be excepted,) unto consignees or to their as-

signees—he or they paying freight at—per barrel bulk.

"In witness whereof, the master of said vessel hath affirmed to two bills of lading, all of this tenor and date, one of which to be

two bills of lading, all of this tend accomplished, the other to stand void.
"JOHN STEWART.
"Dated, CHICAGO, April 17, 1833."

From this first shipment dates the beginning of Chicago commerce. Following soon after came the trade in lumber, which, so soon as the town and tributary country began to be settled, became a most important article of import. A large part of the region west of Chicago was prairie with large areas destitute of timber, and the forests of Michigan and Wisconsin, along the lake shore, became early sources of wealth to the enterprising lumbermen; and building material became the second essential article of Chicago commerce. Charles Cleaver, in a letter written, descriptive of Chicago, in 1833, says that the stock of lumber at that time in the town did not exceed ten thousand feet, and that prices ranged from \$60 to \$70 per thousand. Two small saw-mills, one, (water-power) some six miles up the North Branch; and the other (steam-power), owned by Captain Huntoon, south of the present line of Division Street, cut such timber as grew in the vicinity. It was generally of small growth and of varieties not valuable for building purposes: mostly oak, elm, poplar and white ash. Of course, with such a meager supply of growing timber and such inadequate facilities for its manufacture, the commerce in lumber was evolved from necessity, so soon as the town began to grow and the surrounding country began to be settled.

David Carver was the first lumber merchant in Chicago, and the first to inaugurate that important branch of commerce. He came to Chicago in 1833, either in the spring or early summer. He owned a schooner, named for himself, the "David Carver," which plied as a lumber craft—probably the first—between St. Joseph, Mich., and Chicago. It was sometime during the summer or fall of that year that he brought in the first cargo of lumber, and started the first lumber yard in the city. He worked his vessel into the main river, and

discharged his cargo of pine on the south bank, between LaSalle and Wells streets, where the first lumber yard was thus started. Two years later, Kinzic, Hunter & Co., Jones, Clark & Co., and perhaps others had engaged in the business; quite a lumber fleet was employed, and Chicago became the great center of lumber trade, which trade has ever since been an essential element in its commercial importance.

With the exception of the lumber trade and the shipment of beef and pork, both of which branches increased in amount and importance from year to year, the commerce of Chicago was still one of large receipts of food, clothing material, building material, agricultural implements, etc., etc., with small exports in return. It was not until 1838 that Chicago, now the greatest primary grain market in the world, exported its first invoice of wheat. It amounted to seventy-eight bushels, and was shipped in bags to Buffalo, on the steamer "Great Western," by Charles Walker, of the firm of Walker & Co. The following year (1839 Messrs, Newberry & Dole commenced as shippers of wheat, on a scale which completely overshadowed Walker in the magnitude of the business done. Governor Bross, in one of his historical papers in 1868, writes of this early shipment and of the elevator facilities of the time as follows:

"The history of the next shipment, in 1839, of three thousand six hundred and seventy-eight bushels, on board the brig 'Osceola,' is scarcely less interesting. It was made by Newberry & Dole, whose warehouse was on the North Side, immediately east of where Rush-street bridge now stands. The wheat was bought from farmers' wagons and hoisted to the upper story by Irish power, with rope and pully. The problem of loading on the brig was solved by fixing a spout in one of the upper doors and making it gradually narrow till it reached the deck, where the wheat was discharged into boxes holding four bushels, weighed and transferred into the hold of the vessel."

A reminiscence of this period in the commercial history of the city appeared in the Democrat of September 25, 1848, from which are given the following extracts:

"In 1830 Chicago was a mere trading post, where some one hundred persons, principally Government agents, troops, Indian traders, etc., resided. In 1831 there was but one store, and that was kept by G. W. Dole inside the palisades of the fort.\* From this year until 1839 the post and country, to the distance of one hundred miles and over, was supplied with the necessities of life—flour, corn, pork, beans—from the East, principally from Ohio, † In 1839 the export trade commenced. That year a vessel which came to this port with seven hundred barrels of flour returned to Ohio without disposing of the article. This year also the first cargo of wheat was shipped from this port by Giles Williams. The pile of wheat lay in a shanty where the Winslow warehouse now stands (South Water, between Dearborn and Clark streets), and was quite a curiosity at the time. This was the commencement of the export trade, which in 1842 ran up to 586,907 bushels of wheat and 2,920 barrels of flour."

The above extracts mention a shipment of wheat in 1839, other than that of Newberry & Dole before mentioned. It is possible that there is a confusion in names, and that both accounts refer to the same shipment.

It appears that at that time the importation of flour to Chicago ceased, and from that date the city became an exporting point, not only for provisions, but for wheat and flour. The commodities heretofore named as first becoming articles of commerce have ever since been the most important in the trade of the city, and the con-

stantly increasing volumes of trade in them has been a never failing source of prosperity. As the country became settled, the agricultural products became more diversified, and, with the increased facilities for transportation, first by the completion of the canal, and later by the railroad system, all the diversified products of the richest and most extended agricultural region on the continent, poured with a never ceasing stream through the marts of the growing city, increasing its wealth and importance, in a ratio from year to year such as was never known before in the history of any commercial city on the earth. The wonderful growth of Chicago's trade cannot be told in narrative. It is a matter of comparative statistics, and will be thus treated further Supplementary to the export of beef and pork in 1833, and wheat in 1839, flour was first exported in 1839, in small quantity, by John Gage. Corn, now the most important cereal raised in the West, and the largest in quantity of any exported, was not shipped in large amount until 1847. Although raised in large quantity it was fed to stock, or otherwise found a local consumption until long after the surplus wheat had become a regular article of export.

In 1841, a memorial was presented to Congress for a further appropriation for the improvement of the harbor of Chicago, and for other relief. It was accompanied by most elaborate statistics of the trade and commerce of the city during the preceding six years and a full list of the mercantile firms which had suspended business since 1837.\* The memorial was drawn and the statistics compiled by the late Thomas Hoyne, and are, so far as can be found, the only comprehensive statistics of Chicago trade and commerce, in the articles mentioned, compiled during the period treated, sufficiently accurate to be deemed of historic value. His statement of the trade and commerce of the city for the years 1836 to 1841, inclusive, with names of dealers, description of products, and valuation, is given below:

products, and valuation, is given below: 1836—Walker & Co. exported \$1,000 in hides.

1837—Walker & Co. exported \$10,000 in hides, and Absalom Funk \$1,000 in beef and pork. Total, \$11,000.

1838—Walker & Co. \$25,000 in hides and thirty-nine bags of wheat shipped in the steamer "Great Western"; Funk, \$1,000 in beef and pork. Total, \$26,000.

1839—Walker & Co., \$15,000 in hides; Giles Williams & Co., forty-three thousand six hundred and ninety-five bushels of wheat, † \$6,000, and corn and flour, \$780; C. McDonnell, merchandise, \$1,000; John Gage, flour, \$2,063; Payne & Norton, pork, beef and lard, \$10,000; and Funk, beef and pork, \$1,000. Total, \$35,843. Newberry & Dole shipped three thousand six hundred and seventy-eight bushels of wheat on the "Osceola" in October.

1840—C. Walker & Co., hides and wheat, \$185,000; Giles, Williams & Co., wheat, corn, flour, pork, beef, tallow and hams, \$5,280; Church & Selden, white beans, \$50; L. Lynd & Co., flour, salt and pork, \$180; C. McDonnell, merchandise, \$1,000; B. W. Raymond, flour, wool, pork, wheat and beans, \$3,000; S. B. Collins, lead, \$150; John Gage, flour, \$626; Crawford & Harvey, wheat, \$1,552; Bristol & Porter, wheat, \$10,120; John Finnerts, hides and furs, \$2,000; Payne &

<sup>\*</sup> The writer is not historically correct. There were other traders in Chicago at that time. See early history.
† The writer is in error concerning the article of pork. Both beef and pork were in fair supply after 1834. There were slaughtered that year in Chicago 4,400 hogs and 1,000 cattle.

<sup>\*</sup> The list of suspended firms appears elsewhere, in its proper historic con-

nection.

† There is no record of the shipment of this wheat to any Eastern market. It was probably bought of farmers and sold to the local trade of the city and strrounding country. The same may be said of a considerable portion of the hides, provisions, flour, corn, and other commodities mentioned in the report. The statement is valuable as showing the growth of trade in these important commodities, whether they were shipped to Eastern markets or sold at home. It is a comprehensive statement of the whole trade of the city embracing not only the exports, but the home trade also.

Norton, pork, beef and lard, \$6,700; H. C. Stone, wheat, flaxseed and beans, \$2,271; Gurnee & Mattison, hides and furs, \$9,454; Funk, beef and pork, \$1,500.

Total, \$228,883.

1841.-W. W. Saltonstall, 7,326 bushels of wheat, \$6,165; C. Walker & Co., 42,200 bushels of wheat, \$29.536; W. L. Whiting, 94.548 bushels of wheat, \$75.362; H. Norton & Co., 24,038 bushels of wheat, and 170 barrels of pork, \$24,432; Giles, Williams & Co., 43,695 bushels of wheat, 1,781 bushels of corn, 553 barrels of flour, 141 barrels of pork, 401 barrels of beef, 2,718 hams, 33 bushels of grass seed, 39 bushels of beans, \$33,733; Church & Selden, 162½ barrels of beans, \$414.50; Harmon & Lewis, 8 tons of lead, \$640; Lynd & Co., 70 barrels of flour, salt and pork, \$240; C. McDonnell, merchandise, \$1,500; B. W. Raymond, pork, beans, flour, wheat and wool, \$6,000; Hiram Norton, butter, \$200; G. W. Merrill, 12,212 bushels of wheat, \$9,359; John Gage, flour, 1,852 barrels, \$6,144.-75; Crawford & Harvey, 18,700 bushels of wheat, and 1,000 barrels of beef and pork, \$21,200; Dodge & Tucker, pork, lard and hams, \$5,000; Bristol & Porter, 19,493 bushels of wheat, \$10,120; Payne & Norton, pork, beef and lard, \$2,000; H. Buht, furs, \$3,000; H. O. Stone, flour, pork, flaxseed and beans, \$1,044; S. T. Otis, pork, hams and lard, \$500; Gurnee & Mattison, hides and furs, \$17,500; Absalom Funk, beef and pork, \$1,200; M. & S. Co., beef and pork, \$1,000; Smith & Webster, 42,000 bushels of wheat with beef, pork and flour, \$72,000. Total, \$328,290.25.

The statement also comprised the following schedule of products, shipped during the period which could not

be apportioned:

Shipped by Newberry & Dole, 6,627 barrels of pork, beef, flour and whisky, valued at \$60,270; 50,136 bushels of wheat, \$50,136; 704 packages of furs, \$7,000; 3,235 hides, \$9,705; 40 tons of lead and shot, \$80. Shipped by W. S. Whiting, 566 tons of pork, beef,

flour and whisky, valued at \$33,360.

Shipped by Smith & Webster, 3,450 barrels of beef,

pork and flour, valued at \$20,700.

Shipped by Bristol & Porter, 17,057 barrels of provisions and flour, valued at \$102,402: 214 tons of merchandise, \$14,000; 6,223 hides, \$18,669; and 421 packages of furs, \$4,210. Total shipments above named, \$321,252.

The aggregate value of the trade in produce and native products for six years, as shown in the foregoing

statements, is summarized as follows:

1836, \$1,000; 1837, \$11,000; 1838, \$26,000; 1839, \$35,843; 1840, \$228,883; 1841, \$328,290.25;

Total for six years, 1836 to 1841, inclusive..... \$952,268 25

The commerce of Chicago for this period, and for the two succeeding years, so far as imports and exports showed, was, according to the records of Captain Seth

Johnson, Deputy Collector of the port, as shown in the following tabulated statements:

EXPORTS.	IMPORTS.
1836 1,000 64	1836\$325,203 90
1837 11,065 00	1837 373,667 12

	Bark 430 cds.

The shipments of wheat and flour up to the year 1842, inclusive, were given by early statisticians as follows:

Wheat, 1838, 78 bushels; 1839, 3,678 bushels; 1840, 10,000 bushels; 1841, 40,000 bushels; 1842, 586,907 bushels. Flour, 1842, 2,920 barrels, which was the first considerable shipment recorded in the annals of the trade.

No reliable statistics of the shipment of corn are extant earlier than 1847, although unimportant shipments were made prior to that date. In 1847, 67,315 bushels were shipped to Buffalo, Cleveland, Detroit, and other Eastern markets, the immense export trade in that cereal being inaugurated that year.

Oats also appears for the first time in the statistics of the year 1847, as an article of export, 38,892 bushels

being shipped.

The first shipment of wool, 1,500 pounds, was made in 1842.

The following price current, from the Daily American, April 11, 1840, shows the variety of commodities then dealt in, and the prevailing prices at that time:

From the foregoing the reader may trace the growth of the commerce of Chicago from its beginning in 1833 to 1843, at which time the city had fairly taken its place as the most important inland commercial mart in the country. In 1842, for the first time the exports were more than the imports. The succeeding five years to the close of 1847, at which time the Chicago Board of Trade was organized, the increase in the commerce and trade of the city kept pace with its own marvelous growth, and the rapid settlement and development of the vast region lying to the west and northwest, which then and ever since has been tributary to it.

The imports from the beginning showed the importance of Chicago as a distributing point for general merchandise, and marked it as the central inland emporium of trade it has since become. It is unnecessary in this connection to trace, except so far as appears statistically, the growth of the trade in dry goods, groceries, crockery, hardware, and other branches of merchandising from the beginning. The columns in the tables given and to be given, showing the increase of imports from year to year, are sufficient. They show

that in the distribution of goods the city has, in its increase, kept even pace with its exports of the natural products, and that it has with uninterrupted progress come to be, not only the greatest inland market for cereals and provisions, but the greatest inland distributing point for general merchandise in the world. So, from the small beginnings here recorded each year, the increasing tides of trade have ebbed and flowed, carrying out the golden harvest to feed the nations, and bringing in the products and manufactures of other climes and other people for the enrichment, enjoyment, and comfort of the millions who now acknowledge Chicago as their great emporium.\*

Supplementary to statistics already given, the following shows the growth of trade and commerce for the succeeding five years, from 1844 to 1847, inclusive:

IMPORTS,	EXPORTS.		
1841\$ 564,347 88	1841\$ 348,362 24		
1842 800,427 24	1842 659,302 20		
1843 1,435,886 70	1843 1,008,207 94		
1844 1,686,416 00	1844 785,504 23		
1845 2,043,445 73	1845 1,543.510 85		
1846 2,027,150 00	1846 1,813,468 00		
1847 2.641,852 52	1847 2,296,299 00		

The leading articles of export were:

	Wheat, bu.	Flour, bbls.	Beef, Pork,bls.	Wool, Dis.
1842	587,207	2,920	16,209	1,500
1843	628,966	10,876	21,795	22,952
1844	891,894	6,320	14.938	96,635
1845	956,860	13,752	13,268	216,616
1846	1,459,594	28,045	31,224	281,222
1847	1,974,304	32.538	48,920	411,488

As showing the character and variety of the general mercantile trade of the city in 1847, the following analytical table of the imports of that year are given. The amount of goods, wares, and merchandise received at Chicago from the opening of navigation in 1847 to November 1 of the same year, not including goods landed here and taken to the interior, compiled from the original invoices of merchants, was as follows:

Dry goods \$837	451 22	Liquors	7
	027 56	Tobacco and cigars. 3,716 00	)
Hardware 148	811 50	Ship chandlery 23,000 00	,
Iron and nails 88	,275 00	Tools & hardware 15,000 00	)
Stoves and hol'ware 68	,612 00	Furniture trimming. 5,564 07	,
Crockery 30	,505 00	Glass 8,949 24	,
Boots and shoes 94	,275 00	Scales 4.044 55	,
Hats, caps and furs. 68	,200 00	Coaches, etc 1,500 00	)
Jewelry, etc 51	.000 00	Looking glasses, etc. 2,500 00	)
Books and station'y. 43	,580 00	Marble Soo oo	,
Printing paper 7	,284 11	Oysters 2,500 00	þ
Presses, type, and	į	Sportsmen's articles, 2,000 00	)
printing materials 7	,432 50	Musical instruments, 6,426 oo	)
Drugs & medicines. 92	,081 41	Machinery, etc 30,000 00	)
	,460 00		
Total value of impo	rts of mer	chandise \$2,259,309 83	,

The total value of miscellaneous articles imported in 1847, exclusive of lumber, and not included in the above, was \$117,210.29. It comprised: Salt, 24,817 bbls., and 5,537 sacks; coal, 15,782 tons; water lime, 1,618 bu.; besides grindstones, iron, fish, cider, and other articles altogether of considerable value.

The amount of lumber, etc., received at Chicago for

\* The city from the beginning did a large retail trade in dry goods, groceries, hardware, boots and shoes, etc., with the settlers of the surrounding country. The wholesale trade in dry goods was started in 1845, by Hamilton & Day. Cooley, Wadsworth & Co., two years after commenced wholesaling dry goods on a large scale, and for years did a widely extended business throughout the West. In hardware and iron. William Blair was the pioneer in the wholesale trade, which he began in 1844. The whiesale trade in groceries began quite early, but the queet the pibling trade in clothing was begun by Henry A. Huntingdon, in November, 1852, afterward Huntingdon, Wadsworth A Parks. Their sales for the first year amounted to \$200,000. C. N. Henderson & Co. were the first wholesale dealers in boots and shoes, beginning in a small way in 1851. O. F. Fuller commenced the wholesale trade in drugs, dyes and chemicals in 1852.

1847, from the opening of navigation to November 1, was as follows:

Plank, boards, etc., ft.32,118,225	Shingles-bolts, cords 328
Shingles, M12,148,500	
Lath, M 5,655,700	Staves 50,000
Square timber, feet. 24,000	Spokes109,000
Total value	\$26= 222 =0

The exports from the port of Chicago during navigation season of 1847, were as follows:

Wheat, bushels	1,974,304	Flax Seed, bushels 2,262
Flour, barrels	32,598	Mustard Seed, bushels 520
Corn, bushels	67,315	Timothy " 536
Oats, "	38,892	Hay, tons, 415
Beef, barrels,	26,504	Cranberries, bushels 250
Doels 44		
Pork, "	22,416	Buffalo Robes, bales 60
Hams and shoulders	47,248	Dry Hides 8,774
Tallow, pounds	208,435	Deer Skins, pounds28,259
Butter, "	47,536	Sheep Pelts 1,133
Beans, bushels	440	Furs, packages 278
Wool, pounds	411,088	Ginseng, pounds 3,625
Tobacco, "	28,423	Ashes, barrels 16
Lard, "	139,069	Bristles, pounds 4,548
Leather, "	2,740	Glue, " 2,480
Beeswax, "	5,390	Brooms, 3,168
Oil, gallons	8,793	
Lead, pounds	10,254	Barley, bushels 400
Hemp, "	6,521	Value, \$2,296,299.

Besides a large amount of merchandise, produce, provisions, grain, horses, cattle, salt, and supplies of all kinds sent to the lumber and mining regions, and different ports on the upper and lower lakes.\*

The preceding pages have given a history of the commerce of Chicago from its beginning to a time when it was primarily established; and had attained such magnitude and importance as to have evolved a commercial association, the Chicago Board of Trade, which thereafter became the exponent of mercantile thought and the representative of the executive force of trade in The specific history of this organization will the city. be given further on.

From the annual reports of the Chicago Daily Democratic Press, the less elaborate reports of other contemporaneous journals, the reports of Federal officials, and from all other accessible sources of information, the following tables have been compiled showing statistically the commercial progress of Chicago from 1848 to 1857.†

Jesse B. Thomas's Statistical Report,  $\dagger$  The tables, to insure perspicuity, have in some instances, been extended beyond the date mentioned.

\*The receipts by teams, which some years were considerable, were never reported. It is estimated by old dealers that, during the years treated, there were not less than 200,000 per year thus marketed in the city. It has column shows the number of hides taken from the slaughter houses of the city, less the number manufactured into leather in the Chicago tanneries. The number thus consumed annually is not known.

1 During 1857 the local demand from the tanneries nearly equaled the local

supply.

BREADSTUFFS.

### PRIMITIVE MANUFACTURES.

Following, in good time, the ample supply of grain, cattle, hogs and other products of the field and farm, came the establishment of various branches of dependent manufacture—milling, slaughtering, packing, rendering, soap and candle making, brewing, distilling, tanning, glue making, etc., which, as distinguished from the more intricate and varied manufactures of wood

ucts, and were naturally the outgrowth of a bounteous supply of the raw products of the soil. Other manufactures are treated elsewhere. It will be interesting to note in future volumes the immense development of these primitive branches of manufacture, and to mark how largely the manufactures of the great city have sprung from the agricultural products of which it is the great mart.

Of the branches above enumerated, the most impor-

FAT CATTLE FAIR IN 1856.

and metal, may be termed primitive manufactures. Of these there were in Chicago, in 1857, well-established, the following branches, with capital invested, value of manufactures, and number of hands employed, as below stated:

Description of Business.	Capital Invested.	Annual Product.	Hands Employed.
Flour	\$325,000	\$ 636,569	73
Beef and pork	154,100	1,250,000	175
Soap, candles, lard, etc.	296,000	528,021	100
Glue and neats-foot oil	20,000	25,000	15
Starch	15,000	75,000	25
High wines, beer and ale .	497,000	1,150,320	165
Leather	332,000	432,000	126
Total	\$1,639,100	\$4,096,910	679

The above statistics are only of such branches of manufacture as spring directly from agricultural prodtant up to 1857 were: milling, packing, brewing and distilling, and tanning hides; and their gradual development is deemed worthy of further specific mention. Packing Houses and Meat Products.—The first

PACKING HOUSES AND MEAT PRODUCTS.—The first slaughter-house was built on the south bank of the North Branch of the Chicago River, south of the Blooming-dale Road and opposite the North Chicago Rolling Mills. The site of the original log slaughter-house, built by Archibald Clybourne in 1827, for the killing of such cattle as were required by the garrison at Fort Dearborn, is now (1883) occupied by an old frame building that was used by Archibald Clybourne, also as a slaughter-house, now falling into pieces from sheer old age and dry rot. In October, 1832, George W. Dole packed one hundred and fifty-two head of cattle for Oliver Newberry, of Detroit, which were purchased of Charles Reed, of Hickory Creek, at \$2.75 per hundred pounds; the hides and tallow being a perquisite of the slaughterers, who, in this instance, were John and Mark Noble, and the cattle were killed on the prairie,

near what is now the corner of Michigan Avenue and Madison Street. The packing-house was near the southeast corner of Dearborn and South Water streets; the barrels in which the beef was packed being brought from, and the beef shipped to, Detroit. In December, 1832, three hundred and thirty-eight hogs were killed and packed by Mr. Dole; they were purchased from John Blackstone for \$3 per one hundred pounds net, and were killed in the back yard of the warehouse and salted and stowed away in bulk until barrels could be made during the winter. Elias Colbert states, in his History of Chicago, that these meats were sent to New York from Detroit; also that in an old account book of Mr. Dole's was an entry of a sale of a barrel of messpork at \$6 and of a barrel of "one hog pork" at \$14. The following year Archibald Clybourne, the Government butcher for the Pottawatomies, engaged in the packing business, at his log slaughter-house on the east side of the North Branch, where he packed some two hundred and fifty head of cattle and about two thousand hogs; at this place also George W. Dole packed two hundred and fifty head of cattle and one thousand hogs; the average cost of the cattle was \$2.80, and of the hogs \$3 per hundred pounds net. In 1834, Oliver Newberry and George W. Dole had a slaughter-house erected on the South Branch of the river, where some three hundred head of cattle and fourteen hundred hogs were packed during the year. Gurdon S. Hubbard also commenced packing during 1834 in the old bank building, corner of Lake and La Salle streets, but, in consequence of the lack of barrels, the five thousand hogs killed had to be stowed away in bulk until the ensuing spring, when barrels were brought from Cleveland at a cost of \$1 apiece. In 1837-38 Mr. Hubbard built a packing-house on Kinzie Street, near Rush Street, where he carried on business until 1840, when he built a house on South Water Street, between Clark and LaSalle streets. There he continued the packing business until 1848, when he removed to the North Branch. In 1836, Sylvester Marsh, who packed with Mr. Hubbard from 1833 until 1834, built a packing-house on Kinzie Street, near Rush Street, and in 1838, or 1839, entered into partnership with George W. Dole.

Mr. Marsh remained in business in Chicago until 1855. He was, in the fall of 1883, still alive, and a resident of Concord, N. H. On October 22, 1883, he appeared before the United States Senate committee on education and labor, then in session at Boston, and, prompted by the questions of the members, told the interesting story of his long and busy life. From the published interview the extracts below are taken:

Q. Where were you born?

A. In Campton, N. H. Q. That is about how far north from here?

A. By the old stage route it would be about one hundred and

Q. You may state the places where you have since resided, without, at present, giving any particulars with regard to your residence.

A. I was born in 1803, and resided in New Hampshire until I was nineteen.

O. At Campton?
A. Yes, From Campton I came to Boston; from Boston I went to Ashtabula County, Ohio; from Ohio to Chicago; (I was in Davenport, Iowa, in 1852-53, but did not stay there mucha; from Chicago I came back to Jamaica Plain, near Boston, in 1855; was there six years; went back to Chicago and staid there three years, until 1863. In 1863 I went to Brooklyn, N. V., and was there from 1863 until 1864. I went from there to Littleton, N. II., for the purpose of building the railroad up Mount Washington. lived there fifteen years and then came to Concord, where I now

Q. You are the inventor and constructor of the Mount Washington Railroad?

A. Ves, sir.
Q. My object in taking your testimony is, by the statement of your experience during your lifetime, to be enabled to give the people of the present day an idea or picture of the industrial life of the American people, and of their development during your lifetime and within your recollection. Your father was a farmer, was he

A. Ves.

Passing over the period of his life prior to his reaching Chicago in 1833, the interview continued as fol-

How long did you remain there?

From 1828 to the winter of 1833-34.

Where did your go then?

To Chicago,

In what condition was Chicago then?

Chicago then had about three hundred inhabitants, besides Fort Dearborn, which had eighty soldiers and their officers, making it amount to about one hundred. There was no business done in the winter. Provisions were all taken from Ohio for them to

What made you go there?

A. Well, I heard of it, looked at it, and saw that it was a ood point. I had faith in the growth of the country, and went there to open a market. There was no slaughter-house there, no place to kill a beef, and for sixty days I led the cattle out to an old elm tree that stood on Monroe Street, about where the court-house s, and there I took a tackle and swung them up on the elm after killing them.

Q. What animals did you kill?
A. Beef, principally; there was not anything else there to kill, the first little while that I was there. They had hardly any sheep.

Q. Were there any hogs?
A. Very few hogs. The hogs had all to come from Wabash, one hundred and fifty miles down. I went into that business afterward, and went down to Wabash and drove them up.

You killed those animals to ship to the East? Q. You killed those animais to sinp to the race. A. No; I killed those for the local market, as much beef each

day as was needed for home consumption. Q. Did you commence the meat business there?

Yes, sir.

A. Yes, sn. Q. You were the first one that established it?
A. Yes, sir.
Q. Tell us something of its development afterward.
A. Chicago grew very fast and in 1835 there must have been two thousand five hundred people there. We then went down to the Wabash country, as we called it, and bought cattle and hogs and drove them up for market. We did not ship them then. In 1836 they commenced building the canal, and in that year I packed six thousand hogs there, mostly for home consumption. They were building the Illinois & Michigan Canal then, and the contractors in 1837-38 took the pork for their men. The State failed to pay in 1838-39, and work on the canal was stopped. State bonds went down to twenty-five cents on the dollar, and the State issued what was call "canal-scrip" to pay the contractors what they owed them for work that they had done. That was afterward redeemed dollar for dollar. In 1836 the old town of Chicago was sold. The Government gave the State of Illinois every alternate section for fifteen miles wide, to aid in building the canal from Chicago to the Illinois River-Peru, I think, is at the end of the canal-and one section of that canal was right in the heart of old Chicago. It was sold in June, 1836, by the State of Illinois for a quarter down, and the balance in one, two and three years, and 1 think there was but one man in the city that made his second payment. That was P. F. W. Peck. The thing all burst up, and there was but that one man that made his second payment. They had all paid one-quarter down and given notes at interest for the rest. did so myself, and so did others; but only one made the second payment.

Q. Why so?
A. Because everybody burst up—the banks and everybody else went un.

Q. What became of the canal?
A. The canal went along for awhile. Contracts were entered into by the State, and work went along until 1839, the State trying in every way to pay, and about that time they stopped. There was an appropriation of \$4,000,000 made by the State for internal improvements, but when the canal and railroad were partly done it all burst up, and these improvements were not again begun until about 1847 or 1848. Q. What was the condition of the people around there then?

How were they clad, and how were they housed, and what was the

condition of their wages?

Well, from 1836 to 1842, when the United States bankrupt law was passed, there was no responsibility. No man had anything, hardly, that he could call his own at the time the law was passed in 1842.

Q. You think that the bankrupt act was necessary, do you? A. Oh, yes; they never would have started in the world, if

it had not been for that.

Q. During that time how were prices?
A. In 1833 I paid \$6 a hundred pounds for pork in Chicago.
In 1841, with a view of finishing the canal next summer, I bought pork for \$2, that is to say, I paid \$2 for all pork that weighed two hundred; for all hogs that did not weigh two hundred, I paid \$1.50 a hundred. I bought beef there for barreling in 1843-44 for \$2 a hundred, for the fore-quarters of the beef, if the ox weighed six hundred pounds, and \$1.50 per hundred pounds if he fell under it. That is the lowest price I ever heard of it being sold for.

That was owing to the condition of credit and of the

currency? Yes, and then there was more of this stuff raised than Α. was needed up to about 1846 or 1847, when the famine in Ireland cleaned out the West almost entirely. Wheat was worth twenty-five cents a bushel in 1844 in Chicago. Produce commenced rising from that time, and, you might say, has kept on rising since. Cattle and pork rose a good deal from a small price until in 1850 cattle were worth \$4 to \$5 a hundred pounds, and hogs were worth the same. There has been a steady increase each year. I made money for the reason that everything was going up.

Q. That comes down to when?

A. From 1844 to 1850. Q. You still remained at Chicago? A. Yes.

Q. I suppose Chicago was developing all the time?

A. Yes.

Q. Do you recollect about the price of wheat or corn in those

A. In 1848 corn was worth twenty-five cents a bushel.

Q. That is, at Chicago? A. Yes. Freight then was as high as twenty-five cents a bushel to Buffalo.

Q. And from Buffalo on to Boston what was it?

A. I do not know what freight was to Boston then. I stayed in that provision business until I killed one hundred and eighty-five head of large cattle and five hundred hogs for a day's work, and that is not, comparatively speaking, more than a teaspoonful to what they have come to since I left the business. Chicago had no start, no life, until the Legislature passed what we called the relief law, that is, they gave us as much of the land as we had paid for. If a man had bought four lots and paid the full value of one, the relief law gave us one lot, and then gave us up our notes. was the first sign of life after the break-up in Chicago. There Then, you see, a man who was cleared through bankruptcy, if he could only raise a hundred dollars, had credit, but up to that time, when we were all in debt, nobody could trust his brother. In 1851 and 1852 I spent most of my time in northern New York and Vermont. In January, 1851, I received an appointment as agent for the Ogdensburg & Lake Champlain and Burlington & Rutland railroads. My business was to procure freight and passengers from the West over these roads, for the Boston market. In the fall of 1850, I shipped a propeller-load of about three thousand barrels of provisions to Ogdensburg, which were stored there till the railroad was com-pleted in January, 1851. I bought seven thousand kegs of nails at the Keeseville Iron Works, on Lake Champlain, as return freight for Chicago. Nails were worth only \$2.87½ per hundred, but during the next six months they rose to \$4 per hundred. These northern railroads were not successful in getting much business for the

Eastern markets for a few years, as they could not compete with the New York Central Railroad and the Erie Canal. Q. From Chicago where did you go? A. I went from Chicago to Davenport, Iowa, in 1852. I was there two years.

Q. Did you follow the same business there?

A. No; I was in the grain business there. Q. How were the prices of provisions there?

A. Well, hogs were \$3 a hundred in Davenport in 1852. Q. What are they worth now?

A. I don't know what they are worth now. They vary. They have been as high as eight, ten and twelve cents a pound, though they are down now, I believe.

Q. You do not know the price of other kinds of meat-beef

and mutton, at Davenport at that time, do you?

A. No.
Q. You were in the grain business mostly?
A. Yes.

Q. Do you recollect about the prices of grain there?

A. Corn was worth twenty to twenty-five cents a bushel; wheat from forty to fifty cents; oats about twelve cents.

Q. Did you ship to the East?

A. I did, from Chicago to Buffalo. I did not ship much from Davenport. In 1852 I went into the grain drying business, making kiln-dried meal for the West India Islands, from a process of my own invention. I made five hundred barrels of kiln-dried meal a day, and shipped it to the West India Islands

Q. What sort of market did you get for it? A. A very fair market. The negroes in the West India Islands

Q. Did you ship it down the Mississippi?

A. Some of it, but most of it by way of New York. I made money the last year that I sent kiln-dried meal there, by my own process.

Q. Is the invention still in use?
A. Yes; much of the article is put up now for the European markets under my same brand, "Marsh's Caloric Dried Meal." 1 have five patents for drying grain. There is not so much of this kind made as there used to be, because farmers take care of their own corn now, and if the corn begins to heat they will put it into cars. When I began it they would put it in their warehouses and let it stay there awhile, and it would heat.

Q. From Davenport where did you go?
A. I went to Chicago. I did not really move to Davenport.
Q. You went back then to Chicago. How long did you remain there?

A. I remained in Chicago until 1855, all the time.

Q. There was no special change in the condition of things in Chicago, I suppose, during that time, that you remember?
A. No.

In 1839, Oramel S. Hough and R. M. Hongh were with Sylvester Marsh. In 1837-38, D. H. Underhill came to Chicago and engaged in the packing business for a brief period, killing his hogs near Absalom Funk's butcher-shop, corner North Water and North State streets. About 1841, Eri Reynolds commenced packing in Dole's packing-house. In the winter 1841-42, Oren Sherman and Nathaniel Pitkin, a dry-goods firm, packed several hundred hogs, pork being then at the lowest price ever known in Chicago; Charles Cleaver stating that several loads of hogs were bought by him at that time for \$1.25 per hundred. Archibald Clybourne during the winter of 1842-43 slaughtered and packed for William and Norman Felt-William Felt & Co.about three thousand head of cattle for shipment to New York City; alleged to be the first beef packed in Chicago for an eastern market. In 1843-44, Thomas Dyer and John P. Chapin commenced packing in Reynolds' house, associating with them Julius Wadsworth, in 1844, and then built a packing house on the South Branch near North Street; being succeeded in 1845 or 1846, by Wadsworth & Dyer. During the season of 1844-45 this firm packed the first tierce of beef ever put up in Chicago for the English market; the barrels for the firm's use were furnished by Hugh Maher. In 1843, George Steel packed hogs on South Water Street, near the corner of Franklin Street. About 1849, William B. Clapp entered the pork packing arena. In 1850, Oramel S. and R. M. Hough built a packing house on the South Branch at a cost of \$3,000; in 1853, they built a large stone packing-house costing \$20,000, which was burned in the fall of 1856. They rebuilt in 1857 at a cost of \$25,000. In 1852, Orville H. Tobey and Heman D. Booth commenced packing pork; and, in 1854, John L. Hancock—as agent for Craigin & Co., of New York built a packing house on the South Branch at a cost of \$45,000, and did what was then deemed an enormous business. In 1853-54, Andrew Brown & Co. commenced packing, as did Moore, Seaverns & Co., in the fall of 1854. The following table exhibits the capacity and valuation of the packing houses in 1858, not including the value of the real estate.

	Capacity	Per Day,	Cost of Erecting
	Cattle.	Hogs.	Packing Houses.
G. S. Hubbard & Co	200	1,000	\$10,000
Hough & Co	225	1,000	25,000
Cragin & Co	400	1,000	45,000
Thomas Nash (afterward Van			
Brunt & Watrous)	400	1,400	10,100
Moore, Seaverns & Co	200	600	15,000
A. Brown & Co	200	600	10,000
Tobey, Booth & Co		600	10,000

Beef packing was for years the most ostentatious business in Chicago, and gave the newspapers of the day a most splendid foothold for boasting. Compared with the volume of business in that line now carried on, when single houses do more business daily than was at that time done in a year by the whole city, there was little to brag of; but the journalists of then, as now, looked back for comparisons, and found in them the grand satisfaction which came from past progress and unlimited hope for the future. Below are two extracts concerning the business in its early days from the Daily

Democrat of September 26, 1848:

"The beef-packing season has opened unprecedentedly early this year, and already a brisk little business is being done by one firm in this city-Messrs. Marsh & Sherry. The firm kills from fifty to sixty head per day, and has already shipped seven hundred barrels of beef to the East. Chicago will rely for its supplies of cattle this season principally, if not altogether, on the northern portion of the State. One firm, Wadsworth, Dyer & Co., have already contracted for one thousand head of cattle. We have seen letters to Mr. Marsh from his commission house in Boston, stating that his beef takes the lead altogether of that shipped from Maine; also one from England to Wadsworth, Dyer & Co., stating that as long as their beef is kept up to its present standard there is no fear but it will compete successfully with the best This firm kills none but the heaviest Irish brands, cattle, and uses foreign salt altogether in packing. In consequence of this superiority most of the beef packed in this city goes to England or Boston. It is expected that eighteen thousand to twenty thousand barrels of beef will be packed this season, or perhaps more. Of this Marsh & Sherry expect to pack four thousand barrels, Wadsworth, Dyer & Co. ten thousand, and the remainder by Slocum & Clapp and one other firm. Barrels are selling at \$1.00, at which price contracts for large numbers have been made."

In 1850, November 16, the Gem of the Prairie gave the following exhaustive review of the business, the mention of the firms and business done being as fol-

lows:

"The slaughtering and rendering establishment of Sylvester Marsh is situated upon the beach immediately north of the North Pier. The packing-house is situated on the bank of the river, at the corner of North Water and Wolcott streets. It was built during the present year, is three stories high, and sixty by eighty-four feet in size. He employs seventy-five hands, and slaughters one hundred and eighty-five cattle per day. He pays out for the season, cash, for cattle, 890-

ooo; for salt and barrels, \$15,000; for labor, \$5,000—total, \$110,000.

"The slaughtering and packing house of Gurdon S. Hubbard is situated upon the North Branch, on East Water Street, between Michigan and Illinois streets. Number slaughtered per day, one hundred and five; hands usually employed, seventy-five. He packs this year for Norman Felt, of New York; Joseph Draper, of Boston, and W. Smith, of New Haven. Pays for cattle, \$100,000; for salt and barrels, \$21,000—total,

\$121,000.

"The establishment of Wadsworth, Dyer & Co. is situated upon the South Branch, in the suburb of the city. The various buildings cover half an acre. The number of cattle slaughtered this season by the firm will probably exceed six thousand. The firm employs one hundred and ten men, and slaughters two hundred and ten head of cattle per day. They commenced operations here seven years ago. Their brand in the London and Liverpool markets take precedence over beef from every other quarter of the world. Their hides are purchased by Gurnee, Hayden & Co., and their refuse is carted by C. Beers to his farm beyond Bridgeport. Paid for cattle, \$132,000; for salt, barrels and labor, \$28,000—total, \$160,000.

"R. M. & O. S. Hough are located a short distance below Bridgeport, immediately on the banks of the river. Their building is thirty by sixty feet in size, with wings. They are working fifty hands, and slaughtering one hundred and thirty head of cattle per day. Cash paid for cattle, \$70,000; for salt, barrels and

labor, \$15,000; total, \$85,000.

"Passing down the river until within a short distance of the tannery of Gurnee, Hayden & Co., we come to the slaughtering and packing house of William B. Clapp. He is killing one hundred cattle per day, and working forty hands. He has a contract for supplying one thousand eight hundred barrels to the United States Navy. Cash paid for cattle, \$56,000; for salt, barrels and labor, \$16,000; total, \$72,000.

"A little further down is the establishment of Eri Reynolds, a brick building, fifty by one hundred and twenty feet in size. He packs for himself and W. & H. Felt, of Earlville, N. Y., employs thirty hands and slaughters about ninety head of cattle per day. His estimates for the season are: Cash for cattle, §48,000; for salt, barrels and labor, \$10,000; total, \$58,000.

"The seventh and last establishment, that of Messrs. Clybourne & Ellis, we did not find time to visit. It is situated upon the North Branch, about a mile above Ogden's Bridge. They will slaughter this season about two thousand head of cattle, and the cost of the same, including salt, barrels, labor, etc., will amount to about

\$45,000.

"Hence we have twenty-seven thousand five hundred cattle packed and \$651,000 paid out. The majority of cattle are fattened in Illinois, McLean County bearing the palm; but a portion are brought from Indiana and lowa."

The first cattle-yards were opened in 1848, at the "Bull's Head," and occupied the immediate vicinage of Madison Street and Ashland Avenue; but they were but a make-shift for supplying the necessities of the growing cattle trade, and the live stock dealers became disgusted with the long drive to and from the yard to railroad depots and slaughter houses. In 1856, the wants of the public were met by John B. Sherman, who leased the Myrick property on the lake shore, north of Thirty-first Street, and laid out what were known as Sherman's yards, and this entrepot at once took the

From Annual Review of Chicago Daily Press and Tribune for 1858.

place of the old Bull's Head, and, being upon the line of the Illinois Central Railroad, was eminently adapted

to the needs of the live-stock traffic.

FLOURING MILLS .- The first flouring mill erected in this city was located on the South Branch and was built by Jared Gage in 1836. In partnership with one Lyman, he conducted this mill until in January 1847, when with John C. Haines he purchased the Chicago Mills. These mills were massive, yet commodious buildings of stone situated on South Water Street and the river, and had excellent facilities for receiving grain direct from vessels or canal boats, and for loading the same. They had four run of buhrs and appropriate machinery for elevating and handling grain, all driven by a pair of reciprocating engines, to supply whose consumption of steam required the use of twelve hundred tons of coal The total investment in the plant was annually. \$150,000; in 1854, the proprietors employed thirty men and ground one hundred and twenty-five thousand bushels of wheat and ten thousand bushels of corn, turning out twenty-five thousand barrels of flour and six hundred thousand pounds of meal. At that time the out-put of these mills was nearly all consumed in this city; in the year mentioned less than two thousand barrels were shipped to a foreign market.

The Hydraulic Mills, operated by the old water works engine, were built in 1842 by James Long. They were situated at the corner of Lake Street and Michigan Avenue. In 1848 they were owned and run by J. P. Hodgkiss & Co.; and in that year ground up over one hundred thousand bushels of grain, seventy-five thousand bushels of this amount being wheat. This would be turning out nearly fifty barrels of flour per day. Speaking of these mills the Democratic Press in its commercial review for 1854 says: "The Hydraulic Mills, corner of Lake Street and Michigan Avenue, have until the last season done a large business in the manufacture of flour. Since the construction of the new water works, these mills, having fulfilled their destiny, have brought their business to a close. From the first of January, 1854, to the 28th of September, which was the time included in their last year's operations, they ground eleven thousand barrels of flour and two hundred and

ten thousand pounds of corn meal."

In that year there were but two mills in operation in the city; the Hydraulic Mills, having shut down in September; and a steam mill built in the spring of 1854, by Messrs. Ricord, Bierlein & Co., was in the fall of the same year, completely destroyed by fire. The remaining one, besides that of Gage & Haines, already mentioned, was known as the "Adams Mills," and was an extensive and superior establishment situated on North Water Street and the river. Thirty men were employed here, and in 1854 the output was one hundred and fifty thousand bushels of wheat and five thousand bushels of corn. This was equal to thirty thousand barrels of flour and three hundred thousand pounds of cornmeal. The Adams Mills brand of flour was considered a choice article in the markets and was much sought after by Eastern shippers.

In July, 1855, the Hydraulic Mills were again started, making three mills in operation for that year, the total output of which was nearly eighty thousand barrels of flour, an increase for the year of over thirteen thou-

sand barrels.

In 1856 there were the following mills in operation: Gage & Haines, South Water Street, capital invested \$150,000, flour manufactured 35,000 barrels, value of the same \$250,000, hands employed 30; Adams & Co.'s Mills, North Water Street, capital invested \$125,000, flour manufactured 38,000 barrels, value \$240,000, hands employed 25; Empire Mills, corner North and LaSalle streets, run by Ricord, Bierlein & Co., capital invested \$10,000, flour manufactured 6,000 barrels, value \$39,000, number of hands 5; N. A. Chase, Jr., 12 and 14 North Canal Street, capital invested \$10,000, value of manufactures \$57,569, number of hands 7; Stevens, Lane & Co., 143 West Lake Street, capital invested \$3,500, cost of building \$8,000, barrels of flour manufactured 12,000, number of hands 6; Novelty Mills, owned and run by James McNair, 53 State Street, capital invested \$5,000. A summary of the above statements would be as follows:

Capital invested	325,000
Value of manufactures	
Barrels of flour	
Hands employed	73

During the year 1857, three new mills were built; Shawmut Mills, Star Mills and the mills of Grist, Robbins & Co. The total output of flour of all the city

mills for the year was 96,000 barrels.

Brewing.—The immense brewing interests of Chicago had their origin in the small beginnings of William Lill and William Haas, in September, 1839. - They were really employed by William B. Ogden, who established Mr. Lill in business, at the corner of Pine Street and Chicago Avenue. The "brewery" was a little tenement building in that locality, and the extent of Mr. Lill's manufacture, at first, is said to have averaged about nine barrels per week. After a few years Michael Diversey entered into an active partnership with Mr. Lill, and Mr. Ogden's silent connection with the business ceased. Under the management of Lill & Diversey, the "Chicago Brewery" grew by 1857 to be the most extensive establishment of the kind in the West. It was situated on the corner of Pine Street and Chicago Avenue, the buildings covering a whole block. At the time of the panic of 1857 the firm had invested nearly \$250,000 in their business, and successfully weathered the financial storm. Besides being known as good business men, Lill & Diversey were noted for their benevolence and generosity, the latter being a large benefactor to the German Catholic churches of Chicago.

James Carney, who had formerly kept a grocery store, commenced brewing in a small way in 1840. His establishment was on South Water Street, between State Street and Wabash Avenue. He continued the business until 1855, at which time he retired, renting his brewery to John O'Neill.

F. Busch was also an early brewer, his establishment being called the "North Brewery," and was situated on the Green Bay road, near the lake shore, North Side.

The "Columbian Brewery" was built by J. J. Sands, on the corner of Pine and Pearson streets, in 1855. He manufactured cream ale.

In October, 1855, James Carney, one of the oldest brewers of Chicago, rented his establishment to John

In 1856 Conrad Seipp, now one the most extensive and wealthy brewers in the West, commenced this business in Chicago, investing \$18,000 and turning out \$8,960 worth of malt liquors the first year. In 1857 the entire capital invested in breweries, outside of Lill & Diversey's did not exceed \$70,000.

The annual report of the Democratic Press, issued January 1, 1855, names and locates the firms engaged

in brewing as follows:

"Frederick Burroughs-brewing and malting-Lake Street, near Union Street, West Side.

"The North Brewery F. Busch)—Green Bay road, near the lake shore, North Side.

"James Carney-No. 39 South Water Street.

"J. A. Huck—Wolcott, corner of Division Street, forth Side.

"Lill & Diversey—Chicago Avenue, corner of Pine Street, on the lake shore. The largest establishment in the city and the West. They manufacture all kinds of ale, porter, vinegar, etc.

"Union Brewery (George Metz)-Wolcott Street,

north end, near the lake.

"Garden City Brewery (John Parker), erected in 1854—No. 115 Dearborn Street.

"J. S. Saberton, brewer and distiller — Wolcott Street, near the cemetery.

"North Star Brewery Isaac and John A. Irvin-

Wolcott Street, near North Division."

The names of brewers engaged in the business January, 1857, with statistics of the business for 1856, were as appears below:

Names of Firms.	Capital Invested.	Value of manufac- tures in 1856.	No hands em- ployed	Bbls beer manu- factured.	Bushels grain used.	Pounds Hops con- sumed.
Conrad Seipp George Metz Braham & Co V. Busch J.F.Rodermeyer Bucher & Co Blattner & Co	\$18,000 15,000 8,000 6,000 8,000 5,000 1,000	19,200 \$,000 25,000 40,000 11,200 2,000	6 6 2 4 6 2 2	1,120 2,400 1,000 3,200 5,000 1,400 250	2,240 4,800 3,000 6,400 8,750 2,800 700	2,000 4,000 2,400 600 8,000 832 700
S. Irwin  — Spriggs,	3,000		3	900	2,000 1,800	900
Total	67,000	130,160	33	16,270	32,490	21,432

At that time there were several rectifiers, vinegar manufacturers and a few small brewers whose trade statistics do not appear in the above.

DISTILLING.—The business of distilling high wines came in quite early, but to whom belongs the honor of being the pioneer in the business has not been ascertained. In 1854, there were two quite extensive distilleries. D. Ballentyne's establishment was on the lake shore, south of Twelfth Street; and that of A. Crosby & Co. on the North Branch, near Chicago Avenue. J. S. Saberton also distilled on a small scale, in connection with his brewing business. In 1857, only two distilleries were reported as follows:

Charles H. Curtiss (successor to Ballentyne)—lake shore, south of Twelfth Street. He had a capital invested of \$50,000, employed twenty-five hands, and paid out for raw material and wages \$150,000. He produced, annually, 10,000 barrels of high wines, valued at

\$150,000.

A. & W. H. Crosby & Co.—North Branch, had invested \$75,000, employed fifty hands, and consumed annually 300,000 bushels of grain and 3,000 tons of coal. The yearly production of high wines was 1,050,000 gallons, valued at \$310,000.

The comparative summary of the brewing and distilling business made by the Democratic Press at the

close of 1856 was as follows:

C	A	P	1	T	A	L

Tanning.—During the year 1831 John Miller, the brother of Samuel Miller, built a tannery just north of the latter's tavern, near the junction of the two branches of Chicago River. They were in the business together, and in the spring of 1832 Benjamin Hall joined them in the enterprise. They continued in that business for a number of years. W. S. Gurnee was one of the earliest of this class of workers. In 1843 the "Chicago Hide and Leather Company" was formed, with Mr. Gurnee as president. Gurnee, Hayden & Co., Gurnee & Yoe, etc., are firms whose names are familiar to early settlers. George Bickerdike and James Knox also had tanneries on the South Branch for a number of years. In November, 1848, George Burr established a morocco leather manufactory in a large four-story building, on the South Branch.

The business of tanning did not, however, assume any large proportions until subsequent to 1857. A reference to the table showing the receipts and shipments of hides, show that nearly the whole amount received and slaughtered were shipped to Eastern markets.

SOAP, CANDLES, OILS, ETC.—In 1833, Elston & Moodruff commenced to make soap and candles, in a log barn which had already been built on Kinzie Street, at the junction of the North Branch with the main river. In 1835 Charles Cleaver, a young Englishman, purchased Mr. Woodruff's interest, and the next year bought Mr. Elston's share in the business. Mr. Cleaver removed his factory to the corner of Kinzie and West Water streets in 1836. His enterprise had so prospered by

Charbleever

1837, that he was obliged to erect a two-story-and-basement building, situated on the corner of Washington and Jefferson streets, where he remained for five years. In 1842 he moved to the corner of Madison Street and Canal, and in 1849 to the North Branch, near Division Street. Mr. Cleaver changed his location to Cleaverville, now Oakland, in 1851. Here, notwithstanding the smiles and even derisive laughter of many who thought him foolish in establishing a large manufacturing industry "so far out in the country," he erected a threestory brick building, where he not only made soap and candles, but also the packing boxes desired for his trade. He built a pier into the lake, at which vessels loaded and unloaded, and had the satisfaction, a few years afterward, of seeing the Illinois Central, Michigan Central, and Chicago, Alton & St. Louis roads pass in front of his factory. In 1857 the village of Cleaverville was laid out upon Mr. Cleaver's land. Until that year his factory did nearly all the rendering for Chicago packers, and was one of the most extensive in the city.

Charles Shillitoe & Co. commenced to manufacture soap and candles in August, 1836, but the firm was dissolved in about a year. Joseph Johnston was also engaged in this line of business. "The Chicago Oil Mill" was established by Scammon & Haven in 1852, the building being located on the South Branch near Van Buren-street bridge. The "Chicago Oil Manufacturing Company" was formed in 1855, with F. C. Sherman as president.

Christian Wall & Sons commenced the manufacture of glue and neats-foot oil in August, 1855. Their factory was situated on the west side of the North Branch, above Chicago Avenue. The capital invested was \$10,000. Up to January 1, 1856, they had manufactured one hundred and fifty barrels of glue, one thousand two hundred gallons of neats-foot oil, and four thousand pounds of tallow. They employed fifteen

nands.

A starch factory was also started in 1855, at Cleaver-

ville, by M. L. Keith.

The beginning and development of other manufactures, farther removed from the native products, and requiring more special skill, were as appears in the

following sketch of

EARLY MANUFACTORIES OF WOOD, IRON, ETC .-Although the hypercritical may deny that a blacksmith is, strictly speaking, a manufacturer, the development of this individual into the foundryman is so gradual, and, if the Knight of the Anvil is successful, so certain, that for all practical purposes a starting point in this topic of "Early Manufactories" will be found here. In most new countries of the Northwest the horse and the man occupied the wilds together; and man's mute but indispensable help-mate may be said to have not infrequently been the means of establishing the first branch of manufacture therein. The first blacksmith to visit Chicago, of whom there is any record, was Jean Baptiste Mirandeau, the pioneer settler of Milwaukee, who used to come down from there to repair the soldiers' guns and shoe their horses, long before the first Fort Dearborn was destroyed. After the second Fort Dearborn was built, David McKee was appointed Government blacksmith, his shop being situated near the Agency House, at the foot of State Street. Later came William See, sometimes called "Rev.", a Methodist exhorter, whose daughter, Leah, became Mrs. James Kinzie. In the fall of 1833 Mathias Mason opened a blacksmith shop. Clement Stose and Lemuel Brown established themselves about the same time. These include the earliest blacksmiths or "iron manufacturers," of Chicago; although it must be acknowledged that David McKee's little shop and scant kit of tools bore but a slight family resemblance to the machine shops and rolling mills of to-day.

Lemuel Brown was born in Cumberland, R. I., December, 1784, and died at the residence of his nephew, D. G. Brown, in Kenwood, December 29, 1883; at the unusual age of ninety-nine years and thirteen days. In the fall of 1832 Mr. Brown left Massachusetts for Chicago, being sent by the Government to take charge of the firearms of Fort Dearborn. He was delayed at Cleveland, Ohio, and made his way to Chicago by team during the winter. He arrived in Chicago in the spring of 1833, and with the exception of brief intervals, has resided here since that time. He resided in Hyde Park for the last six years, and voted at every village and school election during his residence. He voted for every President but two, voting for the first

time, though under age, by virtue of the ancient law providing that each free-holder to the extent of four hundred dollars was entitled to vote. He was a consistent Whig, and since the day of the present political parties, a stanch Republican. He was an expert steel temperer by trade, and worked at the forge until past eighty years of age.

In 1832 a number of saw-mills were built along Hickory Creek, and one at the mouth of the slough which then emptied itself into the river just south of Division Street, Chicago. The mill was burned in 1834, and refitted in 1835. During the summer it was mostly engaged in sawing out three-inch plank, which were used in covering the North Pier. Colonel G. S. Hubbard and Captain Bemsley Huntoon were, successively, proprietors. The latter operated it for five or six years, adding to the saw-mill a shingle machine. Captain Huntoon's mill and the water-power establishment of John Miller, fourteen miles up the North Branch, sawed out such timber as grew adjoining, consisting of oak, elm, poplar, white ash, etc. Of such "lumber," in its green state, most of the houses were built, and the reader can easily imagine what these structures must have looked like after the summer's heat had warped and twisted the material.

In the spring of 1833, Tyler K. Blodgett established a brick-yard, on the North Side, not far from the river bank, between Dearborn and Clark streets. He engaged Henry S. Lampman, then of Ann Arbor, as a workman. As Mr. Blodgett operated the first brick-yard in the city, so Mr. Lampman was undoubtedly the first brickmaker. If any brick were manufactured in Cook County before then it is not known. From this yard came the brick for the first building constructed of this material-the dwelling house of Mr. Blodgett, afterward occupied and added to by Colonel M. E. Stearns. The structure was located across the river, opposite this yard, and was originally a one-and-a-half story building, twenty feet square. It was upon the eighth day of October, 1833, that a young man named Asahel Pierce arrived in Chicago from Vermont, and commenced the erection of a blacksmith shop, on Lake Street, corner of Canal. Being unable to find suitable lumber in Chicago, he was obliged to haul his material from Plainfield, forty miles,\* and, after he had purchased Rev. Mr. See's old set of tools, he had a money capital of only a few dollars with which to establish himself in business. But Mr. Pierce set out with such a determination to succeed that he was soon obliged to enlarge his shop. He obtained from John T. Temple & Co., an order for doing the ironing for the first stage line between Chicago and St. Louis. This was in January, 1834. In the spring of that year he commenced the manufacture of the old-fashioned "Bull" plow, with wooden mould-board. This was certainly the first agricultural implement manufactured in Chicago, and the first one made in the State north of Springfield. Mr. Pierce afterward devised many improvements in plows, manufacturing the first steel, or self-scouring plow in the West. In the fall of 1835 David Bradley came from Syracuse, N. Y., in the employ of William H. Stow, to assist in the erection of the first foundry, located on Polk Street, on the west side of the South Branch. The money for the constuction of the so-called "Chicago Furnace," was furnished by Jones, King & Co., who, at this time, employed William H. Stow & Co. The old hardware firm of Jones (William) & King (Byran) had been formed in 1834. The next year W.

<sup>\*</sup> This circumstance leads to the belief that, at that time, there was no large manufactory of lumber nearer than Plainfield.

B. Clarke was admitted to the partnership, forming the "Co." It was this management which furnished the money referred to. The first castings were made as early as December, 1835. In March, 1837, Stow & Co., formed a partnership with King, Walker (J. H.) & Co., (E. Peck), the old firm of Jones, King & Co. having been dissolved, and commenced the operation of a foundry, under the firm name of William H. Stow & Co. They continued to operate it until about 1842.

In the spring of 1834 Briggs & Humphrey inaugurated the business of manufacturing wagons and carriages by starting a small shop on Randolph Street. They continued in partnership for some six or seven years. Soon afterward, Peter Schuttler, who, by 1857, had one of the largest establishments of the kind in the West,

also started a small wagon shop.

Charles Morgan commenced the manufacture of furniture in the spring of 1837. His large factory on Lake Street was burned in 1852, but was rebuilt. In 1857 he occupied a five-story building and had invested \$60,000 in the business.

Among the first sash, door and blind factories, if not the first, was that established in 1837 or 1838 by Ira Miltimore, on the South Branch. It was purchased by David Scott in 1838 and was burned in July, 1842.

One of the earliest machinists and foundrymen of Chicago, and among her prominent citizens was Elihu Granger, Alderman for a number of years and, later, Superintendent of Public Works. Although a native of New Hampshire, he became a resident of New York when a young man, following in various localities his vocation of mechanic and millwright. He came to Chicago in the winter of 1836 for the purpose of building Lyman & Gage's flour mill, the first one erected in Chicago. It was situated on the west bank of the Chicago River, at what is now the west end of Van Burenstreet bridge. The machinery was furnished by the Auburn (N.Y.) State Prison. In February, 1837, having completed his contract with Lyman & Gage, Mr. Granger became a heavy canal contractor, and like all others of that class, became financially embarrassed, being paid in State scrip and bonds upon which he was able to realize but comparatively a small amount. In 1839 Mr. Granger pre-empted Block 4, of the original town, on the north side of Chicago River, which was canal land, and established thereon a small foundry and finishing shop. He made a specialty of manufacturing machinery for elevating grain. The locality of Mr. Granger's first foundry was North Water Street, west of Clark-street bridge.

An attempt has been made in the foregoing pages to chronicle the first appearances of those branches of manufacture previous to 1840, which afterward developed into magnitude, viz., the manufacture of iron and of wood in its various forms. The full list of manufactures of Chicago in 1839 compiled from Fergus's directory for that year, the files of the Daily American, and other sources and including primitive manufactures was

as follows:

"Candle and Soap-Makers.—Charles Cleaver, South Branch; Joseph Johnston, West Washington Street.

"Fanning Mill Manufacturers.—James V. Dickey, North Clinton Street; Albert C. Ellithorpe, Monroe,

near Franklin Street.

"Iron and Brass Founders and Machinists.—Elihu Granger, foundry North Water Street, near LaSalle; P. W. Gates, machinist. No. 42 Canal Street; William and John Rankin, brass founders, No. 55 Clark Street; William H. Stow, foundry, West Randolph Street.

"Wagon and Carriage-Makers.-Briggs & Hum-

phrey, Randolph Street, near Franklin; John Lang, North State Street and Kinzie; John Burgess, Randolph, cast of Wells; Henry Bower, Wabash Avenue, near Randolph.

"Brewers and Distillers,—William Haas, brewer, corner of Chicago Avenue and Pine Street; William Lill, brewer, same location; Edward Nicholson, distiller Blinis Street; menthal in the Blinis Street.

ler, Illinois Street, near the lake.

"Steam Saw Mill.—Captain Bensley Huntoon, proprietor, North Branch.

(Coch and Door Freet

"Sash and Door Factories.—Francis McFall, Market Street; Ira Miltimore, South Branch; Edwin B. Colvin, corner North Water and Dearborn streets.

"Tanners.—James H. Knox, Wells Street, south of Polk; John Miller, North Branch; Marvin M. Ford,

Clark, northeast corner of Madison.

"Flour Mill.—South Branch, Canal Street, Lyman

& Gage, proprietors.

"Miscellaneous.—Charles M. Gray, grain cradle factory, No. 78 Dearborn Street; Hayward & Co., buhr mill-stone manufactory, Kinzie Street; Noah Scranton, block and pump-maker, corner North State and North Water; V. Detrich, match-maker, corner Division and North State; John Penny, brick-maker, North Branch."

Among the earliest of the metal workers who commenced business about the time that William II, Stow & Co. assumed charge of the "Chicago Furnace" in 1839, were the brothers William and J. Rankin. They established a brass foundry, on the corner of Clark and Illinois streets. Hiram P. Moses, Mr. Stow's successor in 1842, owned a shop at this time on the South Branch, at the Polk-street crossing. The firm, at first B. P. Andrews & Co., became afterward Moses & Ayres, and then Hiram P. Moses. The latter was a brass founder and steam-engine and boiler builder. Mr. Moses was perhaps the first manufacturer in Chicago to make a specialty of steam-engine building. In later days his foundry was known as the "Chicago Steam-Engine Works." At this establishment, in 1848, the engines and boiler of the propeller, "A. Rossetter" were made. The "Chicago Eagle Foundry," also operated a similar concern in 1840.

It will be remembered that, in 1839, Elihu Granger established his iron foundry on North Water Street, upon canal land. On account of a decision of the court against his claim, in 1842 he was obliged to change his location to the corner of Franklin and Indiana streets, where for many years he did a large and successful business, adding good facilities for iron and brass castings. In 1853 Mr. Granger sold out to his sons, and they conducted the business until the panic of 1857, when they were obliged to make an assignment to their father and George W. Dole, as trustees.

In 1842 Philetus W. Gates formed a partnership with his father-in-law, Hiram H. Scoville, and opened a small blacksmith and wagon shop on Randolph Street. Mr. Scoville had been engaged in contracting on the canal and had met with serious reverses. Mr. Gates was also without capital. To show the financial condition of the new firm it is only necessary to state that they were obliged to buy one thousand feet of lumber on credit, with which to erect their building, which was situated near the bridge. At the end of the year a foundry and machine shop was built, on the corner of Washington and West Water streets. The firm conducted the business for about five years, when Mr. Gates purchased Mr. Scoville's interest. In 1848, after being alone one year, Mr. Gates admitted A. H. Hoge into partnership. Before the end of the year George S

McKnight had purchased Mr. Hoge's interest, the firm becoming P. W. Gates & Co. Soon afterward E. S. and A. G. Warner, Thomas Chalmers, and Andrew and David Fraser became associated with Mr. Gates, adding to their already extensive business the manufacture of cars. The panic of 1857 found them encumbered with debts amounting to \$350,000; but, although the affairs of the firm were placed in the hands of an assignee, by 1860, every dollar of this indebtedness was paid off.

In 1848, soon after Mr. Scoville severed his business relations with Mr. Gates, he, with his sons, Adison, William and Ives, established a foundry on the corner of Canal and Adams streets. About this time the Galena & Chicago Union Railroad Company commenced laying iron, and Scoville & Sons contracted for building a number of freight and passenger cars. They also built the first locomotive manufactured west of the Allegheny Mountains, called the "Enterprise.' The formation of this firm of Scoville & Sons, in 1848, was the origin of the present 1883 Scoville Iron Works, Nos. 51-53 Lake Street.

In 1846 another branch of iron manufacturing was established in Chicago. During that year C. R. Vandercook & Co. commenced to operate the "Phœnix Foundry," on the south side of the river, near the lake shore. The firm made a specialty of manufacturing "Queen of the Prairies," a new hot-air cooking stove, and also turned out furnaces, grates, etc. This was

the first stove foundry in Chicago.

By 1848 a number of firms were operating quite large brass foundries. Thomas George & Co., on Lake Street, was not only one of the oldest of the brass founders, but the most extensive. Nugent & Owens established their works on Market Street in 1848, but they were burned out in 1854, and afterward the foundry was operated by M. Nugent alone. H. W. Rincker was proprietor of the first bell-foundry on Canal Street near Adams, and in 1848 cast probably the largest bell in the city, for St. Peter's church. In 1854 he also cast the large alarm bell for the court-house. In those days F. Letz's Chicago Iron Works on Wells Street, and James Hannah & Co.'s foundry in Wabansia's addition, West Side, were turning out considerable work. Letz's works had been established some years, and in 1853 he purchased land on Franklin Street, between Washington and Madison, where he erected a substantial cutstone and brick building of three stories.

In 1851 Charles Reissig established the "Chicago Steam Boiler Works" on Jackson Street, west side of the river. He constructed the large mains for the

water works in 1854.

Mason & McArthur commenced to manufacture purifiers and various wrought-iron work for the gas works in 1852, in a small wooden shop on Randolph Street. A removal was afterward made to the corner of Canal and Carroll streets, and in 1855 the facilities of the establishment were greatly increased. By 1857 the "Excelsior Iron Works" were among the leading iron

manufactories of the city.

The year 1852 marks an epoch in the history of Chicago and Cook County manufactories. It was then evident that the city was to become a great railroad center, and all branches of manufactures were fostered. The building of cars and locomotives, especially, grew into large proportions. As has previously been stated P. W. Gates and Hiram H. Scoville engaged in the manufacture of cars on a small scale, when the Galena & Chicago Union Railroad first commenced to call for rolling stock in 1848. Stone & Boomer, in February of that year, began the construction of wooden bridges on

the Howe principle. In November, 1852, they completed the "Union Car Works," on South Clark Street, which were destroyed by fire in September, 1855. In February, 1853, they turned out the first car, and during 1854 four hundred cars were completed. The firm had the contract for equipping the Western Division of the Chicago, Rock Island & Pacific Railroad, and the Ohio & Mississippi Company. At the time of the destruction of the works they were the most extensive of the kind in the West, the gross annual earnings of the firm in the building of bridges being \$800,000. They had contracts with twenty-four different railroads in Illinois, Missouri and Wisconsin. After the fire, the firm purchased the "American Car Works," on the lake shore, in the southern part of the city, a.d associated with themselves N. S. Bouton. Mr. Bouton had purchased the works of G. W. Sizer & Co. This manufactory was completed in the fall of 1852, but did not fairly commence business until March, 1853. Messrs. Stone, Boomer & Bouton assumed charge in 1855, everything was in fine working order, the buildings and necessary yard-room covering thirteen acres of ground. The Michigan Central and the Illinois Central roads passed by the manufactory, so that every transportation facility was at hand. The works consisted of a foundry, blacksmith shop, engine house, machine shop, paint shop and two passenger-car shops, and were known as the "Union Car and Bridge Works. In addition to these buildings the new firm continued to use their old foundry on South Clark Street. It should be remarked, however, that before the American Car Company's works came into their possession, they did a very extensive business under the former management and under the superintendency of D. H. Lyman. During the first year (1853) seven hundred cars were constructed, mostly freight. The passenger coaches of the Illinois Central Company were also built by the American Car Company. The value of the finished work amounted to \$450,000. In 1854 the company manufactured thirty-nine first-class passenger cars and two hundred and thirty platform cars. This work, with the railroad castings, brought the value of manufactures up to \$600,000 in the year 1855. In December, 1856, the car works were bought by the Illinois Central Company. The partnership was dissolved. Mr. Stone went into business as a contractor, Mr. Boomer as a bridge builder, and Mr. Bouton started a foundry on Clark Street, being appointed, soon after, to the position of City Superintendent of Public Works.

In September, 1853, the attention of business men was called to the importance of establishing, at this point, a locomotive manufactory. A company was therefore formed, in 1854, of which William H. Brown was president. The works of H. H. Scoville & Sons, corner of Adams and Canal streets, being adapted to the wants of the locomotive company, were purchased by the new organization. The Messrs. Scoville had already commenced the construction of a locomotive, which was placed upon the track soon after the organization of the company. It was the first locomotive built in Chicago the "Enterprise" and entered the services of the Galena & Chicago Union Railroad Company. Afterward the locomotive company built the "Falcon" for the same road, and during the year of its existence turned out some ten locomotives, when its works and "good will" passed into the hands of the Galena &

Chicago Union Railroad Company.

In 1854 the Galena & Chicago Union Railroad Company established a machine and repairing shop on West Kinzie Street. Locomotives were also built there, the "Black Hawk" being one of its productions. The next year (1855) the Illinois Central followed the example of the Galena road and established shops on the lake shore, south of Twelfth Street. As stated, in 1856, the company purchased the American Car Works, at Carville. In 1855 the Chicago, Rock Island & Pacific Company erected machine and repair works on Buffalo Street, and the Chicago, Burlington & Quincy Company put up similar shops on West Kinzie. The Chicago, St. Paul & Fond du Lac Company also established works on the North Branch of the river. Consequently there was little need for private assistance in the manufacturing of cars and locomotives.

Within the five years succeeding 1852, a number of new iron manufactories started into life. In June, 1853, the "Chicago Iron Railing Manufactory," A. F. Stoddard, proprietor, commences business on Randolph Street. Vincent, Himrod & Company's stove foundry was built the same year, being located on the South John Peattie's steam engine works were located the same year on North Water Street. In 1854, Stephens & Brother established a steam-engine manufactory, and J. W. Cobb's establishment on the corner of Kinzie and Desplaines streets, devoted to the same objects, was burned. The "Chicago Lead Pipe and Sheet Iron Works," corner of Clinton and Fulton streets, were established the same year by Collins & Blatchford, on the corner of Clinton and Fulton streets. Pressed bar lead was also made. The parent house for lead manufacture was located in St. Louis, M. C Barrel established a foundry corner of Canal and Adams, in 1855; and during the same year Russell & Angel commenced business on the corner of Kinzie and Halsted; and Sherman, Bay & Co., on Canal Street. In April of this year, Perkins & Krause began to manufacture steam engines and flour and saw mills, their works being situated on the corner of Canal and Washington.

The following establishments commenced business in 1856: Evarts & Butler, manufacturers of shingle machines, steam engines, etc., North Water Street; James Campbell & Co., boiler manufacturers, Jefferson, near Kinzie; W. M. Horton & Co., founders, corner

Canal and Adams.

In July, 1857, Captain E. B. Ward established his mills for the re-rolling of iron rails. They were situated on the North Branch, three miles from Lake-street bridge. The buildings covered fifteen acres. The machinery was made in Detroit.

But few manufactories of any kind were established in 1857, those already in existence feeling satisfied if

they could tide over the hard times.

By the year 1857 the capital invested in iron works, car manufactories, etc., exceeded \$1,700,000, and the value of manufactures over twice that amount. Some two thousand eight hundred workmen were employed and eight thousand tons of wrought and fourteen thousand tons of cast iron were consumed. In the manufacture of stoves a capital of about \$185,000 was employed, and the value of the products was \$238,000 per annumer.

per annum.

Asahel Pierce, as has been stated, was the pioneer manufacturer of agricultural implements in Cook County, and the first one in northern Illinois. In 1847 Cyrus H. McCormick removed from Cincinnati to Chicago, and made arrangements with C. M. Gray for the manufacturing of his celebrated reaper. About seven hundred machines were made the first year, and fifteen hundred the second. In 1848 Mr. McCormick entered into a contract with Ogden & Jones under the firm

name of McCormick, Ogden & Co. The contract embraced the supplying of Illinois except four counties, Tennessee. Kentucky, Indiana and Michigan. Arrangements were also made to enlarge the manufactory on the north side of the river, near the mouth of the harbor. During this year 1848 Mr. McCormick's brother, Leander, was taken into the business, and in 1849 William S. McCormick was associated. They afterward 1859 became partners in the manufactory. By 1857 the establishment was turning out over four thousand reapers annually, a capital of about \$360,000 being invested.

In 1853 J. S. Wright commenced manufacturing the Atkin's self-raking reaper and mower, his building being on Peyton Street, North Side. The next year three hundred reapers were turned out from this factory. In 1855 Mr. Wright changed his location. In 1857 he was manufacturing one thousand eight hundred ma-

chines.

In 1854, as stated, Asahel Pierce turned over the manufacture of plows to David Bradley, his brother-in-law. Mr. Bradley associated with himself Conrad Furst, and the foundation of the present extensive establishment of the "Furst & Bradley Manufacturing Company" was laid.

H. A. Pitts, manufacturer of threshing machines and horse powers, was also prominent in this branch of industry. His factory, corner of West Randolph and Jefferson streets, was burned in September, 1855, but re-built on a greatly extended scale. In October, 1855, H. D. Emery & Co. established the "Chicago Agricultural Works."

An idea of the growth of this class of manufacturing may be obtained from the statement that in 1856 the capital invested amounted to \$597,000, and the total

value of the production was \$1,134,300.

Among the pioneers in planing and the manufacture of builders' materials—sash, doors, blinds, etc.,—after Ira Miltimore were Foss & Brothers and J. W. Noble, who established themselves in 1848; also F. McFall & Co. and Goss & Phillips, successors to Goss & Abbott. Mr. Goss commenced the business in 1848, and the firm of Goss & Phillips was formed in 1850. Goss & Phillips' factory was consumed by fire in August, 1856, but suspended business only a few weeks, and even then showed the enterprise which the "Goss & Phillips Manufacturing Company" possess to the present day. By 1857 there were some twenty planing mills and sash, door and blind factories, in which establishments was invested a capital of \$445,000. The value of manufactures turned out during the year 1856 was over \$1,000,000.

From the most reliable accounts, as stated, Briggs & Humphrey were the first regular wagon and carriage makers, with Peter Schuttler a "good second." In November, 1837, J. C. Outhet started a wagon manufactory, and continued in business many years, his location being on Randolph Street, between Franklin and Wells streets. B. C. Welch established the first omnibus factory in the city in 1846. The firm name was at first B. C. Welch & Co., then Welch & Mensden, and after Mr. Welch's death in 1856, J. T. Mensden & Co. The factory was situated on Randolph, between LaSalle and Clark streets, and the business had widely F. Busch commenced to manuextended by 1857. facture wagons on Washington Street in 1847. H. Witbeck was one of the largest and best known wagon manufacturers in Chicago for many years. His manufactory, which he greatly enlarged in 1853, was situated on the corner of West Randolph and Jefferson streets.

In 1854 Mr. Pierce, after having conducted the business of manufacturing wagons and plows for twenty years until it had grown into immense proportions, gave up the latter branch of the industry to his brother-in-law. David Bradley, and established the "Chicago Carriage and Wagon Factory" at Holstein, three miles northwest of the city, on Milwaukee Avenue, being the largest and best known house of the kind in the city. Mr. Pierce carried on the business up to September, 1856, when the management was assumed by Tucker & Steinhouse. Mr. Bradley, in the meantime, had associated himself with Conrad Furst, an experienced carriage and wagon maker, and thus was laid the basis of the "Furst & Bradley Manufacturing Company," still alive and wonderfully prosperous.

Among the prominent wagon and carriage manufacturers of early days may also be mentioned Ellithorpe & Kline. John H. Kline went into business for himself

in 1856.

By 1857 the total capital invested in the business was \$356,000, and the value of the manufactures \$948,-160. Over seven thousand wagons and carriages were

manufactured in 1856.

Charles Morgan has the reputation of being the earliest furniture manufacturer in Chicago. John Philips commenced to make chairs in 1845. His factory was on the corner of Green and Third streets, and was the first establishment devoted exclusively to the manufacture of chairs. Both were in business in 1857. Furniture making took a fresh start in 1855; such new firms as Jacob Strehl and Hutchings & Brown going into the business. The capital invested in this branch of industry in 1857 was \$354,000, and during 1856 the manufactures were valued at \$543,000. Among the most extensive then doing business were D. L. Jacobus & Bro., on Randolph Street, and John Finerty, on the same thoroughfare, the latter of whom confined himself to the manufacture of fine goods.

The sub-soil of Chicago and vicinity is a blue clay, underlying the surface from three to six feet. This material is found in great abundance on the South Branch of the River, in Green's addition. Next to Mr. Blodgett, among the first of Chicago's citizens to fairly establish this branch of manufacture was John Penny. Other Pennys followed, and in the forties John Penny was re-enforced by A. J., and G. W., his sons. Penny & Meacham, Penny, Meacham & Harvey, etc., were all in the same business up to 1857. In 1853 the total manufacture of bricks had reached only twenty million, but the entire product was used at home, Milwaukee also furnishing this city a portion of her cream colored articles. By 1854 there were five brick-yards in operation, that of Daniel Elston being the largest. F. T. & E. Sherman had also obtained a reputation for the excellence of their manufacture. In 1857 there were fifteen yards and they turned out about ninety-one million of brick, valued at over \$700,000.

About eighteen miles southwest from Chicago, are situated the famous "Athens Quarries," near Lemont. In 1846 the stone was discovered by some workman while they were excavating for the Illinois & Michigan Canal, but was not then considered of superior quality. It was, at first, used merely for foundation stone. In 1851 the "Illinois Stone Company" opened a quarry there, but even then no one thought of using the stone for facing purposes, or of calling it "marble." In 1852, however, the Merchant's & Mechanic's Bank of Chicago was faced with the Athens stone, the first used for this purpose in the city. F. C. Sherman and William B. Ogden then used it in their buildings, next to the Sher-

man House, and on the corner of Lake and Clark streets. Several large marble yards started up in Chicago during the year 1852, several of them drawing their supply from the Athens quarries. H. & O. Wilson had extensive yards, on the corner of State and Washington streets, established in the summer of 1853. John Shumer & Co., successors to A. S. Sherman, on Water Street, also were actively engaged in that business. The "Illinois Stone & Lime Company" was organized in December, 1853, purchasing A. S. & O. Sherman's interest in the quarry at Lemont, and also the lime kiln near Bridgeport. The organization consisted of W. S. Gurnee, president; M. C. Stearns, secretary and treasurer; A. S. & O. Sherman, superintendents. The reputation of the Athens stone extended until it became the favorite building material in the city. Professor Hitchcock while on a visit to Chicago, during the winter of 1855-56, examined and analyzed it, and called it "Athens Marble." Although really a magnesian limestone, it has since been known by that name.

In 1857 the amount of capital employed in the stone business of Chicago was fully \$1,500,000. During that year the six thousand tons of Athens marble, shipped mostly from Chicago, found its way to all the important cities in the Northwest, and became a serious competitor in the market with the products of the Lockport

quarries, in New York.

In 1838 S. B. Collins & Co. began the manufacture of boots and shoes, in a small way. It increased yearly until 1855, at which time the business passed into the hands of Pearson & Dana. In 1854 E. S. Wells opened the Metropolitan Boot and Shoe Store, and commenced the manufacture on an extensive scale.

In 1855 C. G. Sheffield, as agent of the old type foundry of John T. White & Co., New York, established a branch in Chicago—the only one of the kind west of Cincinnati. It was in a large four-story brick building

on Washington Street.

Messrs. Rossetter & Pahlman established the "Chicago Woodenware Manufactory" in 1854. The value of its product the next year amounted to \$100,000. At this time it was the only establishment of the kind in the West, and the largest one in the United States. E. & D. Brunswick established their billiard table manufactory on Randolph Street at an early day. I. Brown started the first match factory on Wells Street. In 1854 Chapman & Atwood established the "Eagle Match Factory." In June, 1854, the first paper box factory was started at No. 71 Lake Street by Wiegle & Co. The first manufacturer of tobacco was A. Meyers, who commenced business in 1849. In 1856 L. Lyon erected a factory for the manufacture of white lead on Halsted Street, corner of Fulton.

The manufacture of musical instruments was started in 1854. During that year R. G. Green started a melodeon manufactory at the southeast corner of Washington and Market streets. The business had been carried on by Mr. Green and partners in an unostentatious way for two years, and assumed a prominent place among the manufactures of the city and county at this time, when he became sole proprietor of the business. He employed twenty workmen, and made three hundred instruments during the year, valued at \$25,000. The capital invested was \$10,000. Following this first manufactory came additions in 1855. During that year Knaub & Sons began the manufacture of pianos at 145 North Clark Street. Their invested capital was \$3,000. They employed nine workmen, and made the first year thirty pianos, valued at \$10,000. H. Stone also began the manufacture of pianos the same year, at the corner of Clark and Water streets. His capital was \$200; he MISCELLANEOUS MANUFACTURES OF CHICAGO, JANUARY 1, 1857. employed two workmen and made, in one year, eight instruments, valued af \$2,000. John Preston was also making pianos at this time, but his capital, the number of operatives employed, or the extent of his business, are not matters of record. The summary of this branch of business; for 1855, as shown by the Democratic Press, was: Capital invested, \$13,200; number of hands employed, 31; pianos manufactured, 38; melodeons made, 300; total production, valued at \$37,000.

Late in 1855, the first type foundry was started by C. G. Sheffield, at 43 Franklin Street, where he advertised a "type foundry and printers' warehouse." first investment was \$15,000, and he employed fifteen hands. Besides the type he manufactured, he kept for sale the first full stock of printers' material ever offered in the city. His advertisement stated that it included everything in the printer's line, "from a Washington

press to a bodkin.'

As has been remarked, the revival of manufacturing dates from the "wholesale" introduction of railroads in 1852. In 1851 the total capital invested in foundries was \$55,000; in agricultural implements, \$98,000; in wagon and carriage manufactories, \$22,300, and in the black smithing business, \$10,700. By 1854, \$1,650,000 was invested in locomotive, engine and machine shops; \$310,000 in agricultural implements; \$220,000 in wagon and carriage manufactories, and many other lines of manufacture were represented in proportion. A comparison of the value of manufactures for 1854, 1855 and 1856, shows that within those three years it more than doubled.

In 1854 the value of manufactures was as follows: Locomotives, engine, machinery and iron works, railroad cars, furnishings, etc., \$3,200,000; agricultural implements, \$350,000; carriages and wagons, \$500,000; furniture and cabinet work, \$350,000; planing mills, sash factories, etc., \$500,000; brass and copper works, \$135,ooo; stoves, leather, soaps and candles, and all other

branches, \$2,800,000.

A comparison for the years 1855 and 1856 is given in detail. No reports were received in 1857, the year of the panic, but upon the authority of the Democratic Press it may be stated that before the end of the year the total value of the manufactures had equaled that of 1856.

COMPARATIVE VALUE OF CERTAIN MANUFACTURES.

	1855.	1856.
Locomotive, engine, machinery and		
iron works	\$2,876,000	\$3,887,084
Agricultural implements	649,790	1,134,300
Carriages and wagons	702,104	948,160
Furniture and cabinet works	455,500	543,000
Planing mills, sash, door and blind		
factories	749,684	1,092,397
Brass and copper works	377,200	471,000
Whisky, ale, porter, beer, etc	826,645	1,150,320
Oils, soap, candles, etc	464,130	528,02
Leather	290,000	432,000
Marble and stone	588,900	896,775
Brick	260,000	712,000
Stoves	195,000	238,000

Besides the important branches especially mentioned were many others which should be recorded as having become established prior to the close of 1856. The following table from the Democratic Press gives the essential particulars concerning many of them:

				2.1
Name of Firm.	Manufacturers.	Capital Invested	Value of Manufact- ures,	Hands Employed
Change to Co.	1.	A.1		-
Stearns & Co William Holmes	Lime	\$80,000	\$ 87,350	88
Jordan & Olcott	Look'g glass, &c.	25,000	150,000	10
Weeks Bros	Ship builders Ship builders	80,000	75,000	60

## REVIEW OF TRADE IN 1857.

The year 1857, which closes the period treated in this volume, was one of wide-spread business disaster. One of those periodical business convulsions had swept over the land. Following the unexpected failure of the Ohio Life & Trust Company, a panic occurred in the great Eastern money centers, so general as to com-pletely destroy for the time all business confidence. The sudden and forced liquidation of all debts which followed so lessened values that insolvency became the rule rather than the exception among business men. I rade at the close of the year was completely paralyzed, and the new year showed more business wrecks than any five years before. Chicago could not and did not come out of the storm unscathed. The sudden with-drawal of all orders for the purchase of her grain and other products of export on which the stability of her trade was built, and the great depreciation of all State securities, on which rested the solvency of the Illinois banks, brought many of her citizens to sudden ruin, and forced several of her banks into liquidation. Up to that time the opinion most widely held concerning Chicago by those not personally interested in her was, that her marvelous growth had been of the mushroom order; more largely on the basis of speculative hopes in what the city was to become than on any well-grounded confidence in her based on what she had already achieved. The conservative business element of the East had ever viewed her sudden growth with more of suspicion than of wonder, and predictions had been common that the first business collapse would burst the bubble and leave her the ruin of ruins among the speculative cities of the land. The crisis came as unexpectedly to Chicago as to the other cities of the country. For a few weeks each individual and each community was entirely engrossed in endeavors for self-preservation. When the storm had spent its fury, and so far abated as to allow a comparison of damage done and reserve force remaining, the "mushroom city on the lake" was found to have endured the financial storm with more equanimity and apparently less damage than any of the older cities, and to be awaiting the tide of returning prosperity with a courage and strength which her business reverses had only redoubled. Thenceforth her business standing among the cities of the country was not as it had been before; the problematical distrust as to its stability and inherent merit and strength was supplanted by a confidence in its inevitable future which has since then made it the center of confidence for all outside capital as well as the center of hope for all local enterprise.

The sixth annual review of the trade and commerce of Chicago for the year 1857, published by the Chicago Press, gave a full statistical report of the trade of that year, and in its editorial comments reflected the prevailing spirit and sentiment of Chicago. The report was incited by a combination of the spirits of pluck and brag which was then and has ever since been characteristic of the city. The following excerpts are given:

"In accordance with our invariable custom we present to the readers of the Chicago Daily Press, and the public generally, the Sixth Annual Review of the Trade and Commerce of our city; and in doing so it is

proper to remark that such a statement for the year 1857 will be looked upon with an unusual degree of interest—for in many respects it has been the most important one in the history of Chicago. While old and wealthy cities on the Atlantic seaboard succumbed to the financial revulsion-while crash after crash occurred in the commercial world, and ruin left its traces on every hand-from all parts of the country, North, South, East and West, we heard the momentous query put- 'How stands Chicago?' For years the assertion had been made that our city was but a bubble, to be exploded by the first breath of adverse fortune. How nobly she has weathered the storm and falsified the predictions of envious rivals, it devolves upon us, in dry facts and figures that cannot be disputed, to demonstrate. We will show the people of the East that notwithstanding they have rolled desolation and panics from the Atlantic seaboard to the Mississippi, that there is in the commerce of our city a vigor and elasticity which are equal to every emergency. We will show that, all things considered, the Trade and Commerce of Chicago throughout the past year, have been most fully maintained, and that the falling off in some departments of business is due to the general stagnation of trade throughout the whole country. It will be fully demonstrated by our tables of exports and imports-by the well-known fact that the Northwest was never before so rich in the elements of genuine prosperity-that had there been money and confidence in the East, our products would have moved forward in abundance. and the West would have in return depleted the storehouses of the East of their overstocked importationsthat so far as the Northwest is concerned, there was no cause for a panic; and that had the East not spent her substance in over-trading, over-speculating, and by a long series of violations of the laws of commerce, the West would have saved her from the ruin that followed.

"One of the principal sources of strength which, amid the recent panic and wide-spread disaster, has enabled Chicago to achieve so commanding a position among her sister cities of the Union is to be found in the solid capital which her bankers and business men possessed -the accumulations of the energy, the prudence, and the successful commerce of the last dozen years. To this should be added the wisdom and far-reaching forecast which induced them to sustain and give confidence to our home currency-the bills of the Illinois and Wisconsin banks. These bills are secured by State stocks, and though at one time, had these stocks been thrown on the market, the bills could scarcely have been worth fifty cents on the dollar-the actual value according to the sales in the New York market, for most of them ranging at from sixty to eighty cents-yet the people gave them their confidence and passed them from hand to hand in the payment of debts and for the purchase of goods. Our city bankers also acted nobly. some of our country banks were forced to close their doors, and all the banks in Illinois and Wisconsin, except the Marine and the Chicago banks of this city, which to their honor be it said paid the coin on demand for all their issues, virtually suspended specie payments, yet our bankers received at par the bills of all the country banks, and thus saved the business of the city from utter stagnation and ruin. The position which our bankers assumed toward our business men, and that of business men toward each other, was not one of hostility but of mutual forebearance and support, and never in commercial, as well as in all other matters, was the motto more beautifully illustrated-'in union there is strength,'

"In striking contrast with this liberal policy was the course adopted in our sister city, St. Louis. The bankers there became alarmed, and under the self-confident dictation of the State Bank of Missouri, threw out the bills of the States of Illinois and Wisconsin. This at once effectually blocked the channels of trade: in a few days a large number of her oldest and most wealthy business houses went by the board, and in the end, as might have been foreseen, the banks themselves were forced to suspend. As a consequence, merchants in central and southern Illinois, and in southern lowa have made their fall purchases in this city, and never has the great fact stood out in bolder relief that Chicago is the great commercial center of the Northwest than within the last few months. Their interests are identical. and their development and growth in wealth and all that elevates and refines our common humanity must go on in a rapidly increasing ratio for untold genera-

"Another fact deserves special notice here. The influence of our commanding commercial position in enabling us successfully to resist the panic, is patent to all men, and it will have a stimulating effect upon the future growth of the city. During the worst weeks of the panic our shipments of wheat were about a hundred thousand bushels per day, and, of all cereals averaged from one to two hundred thousand bushels. This produce went very far toward liquidating maturing Western indebtedness. When coin and exchange became dear, our merchants took currency from their customers, bought wheat for it and made exchange for themselves. Such an example of Western energy and shrewdness was duly appreciated by the creditors of Chicago dealers upon the seaboard. It is not a mere idle boast; but a simple fact that Western credit is now stronger than ever before.

"To all those who have persistently slandered our city—who have regarded it as an empty bubble soon to explode, and bring ruin upon all those who had placed any confidence in her stability, the figures which we lay before our readers to-day are a crushing, unanswerable

"The opening of the year 1857 was not such as would have foreboded a period of commercial disaster. The country was rich in its products after a series of most bountiful harvests-the majority of our people, owing to the scarcity of money in the East, rather curtailing than expanding their business, and in no former period of our history did the average condition of the commercial houses of this city appear more favorable. As the season advanced, however, matters in the East grew worse, and the Wall-street gamblers, through their organs, raised the cry that the cause of all the disturbance was-the West. Libels on the character of our business men-on the general stability of our country, were published far and wide; and a most desperate effort was made to bring back to their coffers the capital which had forsaken them for a more profitable market in the West. The commercial communities in the East had over-traded, and by a long series of enormous importations, had plunged the country in debt, and now they began to see that unless they could revolutionize the entire country, West as well as East, they alone would be buried in the ruin which their own fol-But all this could have but lies had engendered. slightly affected the Northwest, had the people and the journals of the West been true to themselves. Unfortunately there were some blind, dissatisfied and jaundiced leaders who most effectually played into the hands of the 'croakers' of the East. Parties who had large and extensive time-contracts for produce-made during the winter of 1856-57 in order to affect the market, early in the spring published and most industriously circulated reports-said to have been ' carefully made up from actual observation'-that there was comparatively 'no grain in the country '-that our staples were exhaustedthat the mighty Northwest had neither money nor produce. Unfortunately there were journals throughout the country-some even in this city-which were too stupid to see through the transparent trick-too corrupt to testify to the truth, or too lazy to investigate the matter for themselves-which, with blatant words, loudly re-echoed this false cry of the general poverty of the West. These slanders were most eagerly caught up by the journals of the East and extensively published under the head of 'Western Distrust of the West,' The effect was instantly felt. Our bankers stood appalled at the drain which immediately set in on them from their correspondents in the East. Large sums of money which had been sent forward for the purpose of moving the crops were at once withdrawn; and when navigation opened, it was a difficult matter for our merchants to accommodate the trade. The Chicago Daily Press stood alone in its position, that the Northwest was entirely solvent-that she was teeming with wealth in her products—that her farmers had their granaries and their storehouses full, and were ready to sell at a fair price. To counteract our statements, trade circulars and 'cooked up' newspaper articles were scattered broadcast over the country, stating that all along our rivers and lines of railroad, the country had run itself out, and that in the whole valley of the Illinois there were not two million bushels of grain of all kinds. In contradiction to this, we at that very time published reliable statements, showing that between Naples and Peoria, there had been found by actual count, over two million bushels of corn. The tables of statistics which follow in this review demonstrate to a certainty the truth of the assertions we then made. We find that the receipts of corn for the season by the Illinois & Michigan Canal are 4,122,601 bushels; by the Chicago & Rock Island Railroad, 407,-437; by the Chicago, Burlington & Quincy Railroad, 1,892,219; by the Illinois Central Railroad, 192,102; and by the Galena & Chicago Union Railroad was 354,-166 bushels-nearly all of which was from the crop of 1856. And yet at the commencement of the season, there was 'no corn in the country.

"Not content, however, with slandering the West by representing her as poverty-stricken in respect to the crop of 1856, the same parties circulated false reports relative to the coming crop of 1857. Because, in some portions of our State, the small crop of winter wheat was injured by the winter of 1856-57, it was stated there would be 'no wheat in the country.' Then again, touching the corn crop of 1857, which proved to be the largest ever grown in this State, the same parties, in the face of the promising accounts which came in from all quarters misrepresented it, both as regards quantity and quality, carrying out the policy-or plan, as it would appear studiously arranged beforehand-to damage Western interests and Western men. True, all now know that the position of the Chicago Daily Press was correct—as the facts above given, and which may be found further in detail in this article abundantly prove; but these truths could not at the time spoken of be demonstrated beforehand to the people of the East-especially as there was a very active party there, who deemed it their only salvation to roll back the 'star of empire' from the Great Valley of the Mississippi. The honest friends of the West were frightened

by the misrepresentations that had been spread by interested gamblers and their abettors—and the consequent general lack of faith in the West was but the entering wedge to the widespread disaster which followed, and which all, more or less, have felt and do now experience.

"It is not our object or design to brood over the errors of the past; but it is the duty of the honest journalist to chronicle the events of the year, be they favorable or otherwise, so that our people may have an opportunity to learn wisdom from experience; and in this connection, it is interesting to look around and see the position which those now occupy who labored so industriously to damage the Northwest. They have been the first to fall into the pit they so earnestly dug for others; and if ever they be resurrected, it will be to be looked upon with general distrust. As for those journals which so violently opposed Western interests, while catering for Western support, they have spent their shot, and their shafts are for the future barbless. The mighty Northwest, even now, stands firmly in her position; Chicago, her center and index, still maintains her commercial supremacy-and it has been the wonder of the whole continent that she, so young, so ambitious and enterprising, should have so stoutly and so bravely withstood the revulsion.

"By reference to our commercial tables, it will be seen that while we have exercised a most laudable economy in our imports of merchandise, our exports, even in spite of the low prices which prevailed, have not materially fallen off. We have exported more wheat, packed more beef, and shipped more cattle than in the previous season; and still there is a large surplus in the country for next season's business. Unless some hitherto unknown mine be sprung upon the money markets of the world, the reasonable prospect is, that the business of Chicago the present year will far outstrip that of any previous one. There is but little grain in the East The banks with four months of winter before them. of New York are overflowing with gold, ready for profitable investment; while we have an abundance of produce of all kinds, which, as soon as navigation opens, will go forward and relieve the embarrassed of all classes-for it is a well-known fact, that when the grain moves general prosperity follows.

"In the tables which follow in this article will be found the receipts, shipments and prevailing prices of almost every important article of trade and commerce for the year 1857, as well as for a series of years preceding. To the merchant, the trader, or the property-owner, they cannot fail to be interesting; as without a knowledge of the facts they demonstrate, any movement in the commercial world would be but groping in the

dark.

"The grain trade—which is probably the most important branch of our commerce—has been active, and shows, contrary to general expectation, but a slight falling off on the business of 1856, and an increase over that of 1855. The receipts of all kinds of grain in 1855 were 20,487,953 bushels, while during the past year they foot up 21,856,206 bushels—a falling off on the receipts of 1856 of about three million bushels. The shipments of grain and flour reduced to its equivalent in wheat, during the past year, amount to 18,032,768 bushels—which is but 2,818,618 bushels less than was shipped in 1856, and over two millions more than were shipped in 1855. It will be noticed, however, that while there is a slight reduction in the general footing up for

the year, that in the great staples of the grain trade we 9,485,652 bushels, or 1,147,632 bushels more than in 1856, and 3,286,897 bushels more than in 1855. In flour also, there is a large increase. We exported in 1857 259,-648 barrels, or forty thousand barrels more than the shipments of 1856. Unfortunately, the people of the East became panic-stricken just as the wheat crop of 1857 was beginning to come in—else our shipments of wheat and flour reduced to its equivalent in grain, would have been several million bushels more. For the present year there is a grand prospect for this trade—the crops of 1857 almost untouched, plenty of money in the East, and a general scarcity of the cereals.

"The provision trade has shown quite an important increase over the business of 1856. The number of cattle slaughtered and packed during the season just closed is 19,127—an increase on the business of 1856 of 4,000 head. Before the scarcity of money occurred, however, packers' estimates exceeded 30,000 head.

"In 1857 we find there were over twenty-five thousand cattle shipped East—an increase of over three thousand head on the business of the previous year. Had the season been longer this number would undoubt-

edly been greatly increased.

"Although the past year has not been very profitable to lumber manufacturers, yet the figures show the trade to be in a most favored position. The receipts are 459,639,198 feet, or over three millions more than in 1856. Had the business kept up during October and November at the same rate as the previous portion of the season, the receipts could not have fallen short of 500,000,000 feet. The shipments for the year are 58,221,063 feet more than those of 1856.

"The stone business in Chicago is quite a prominent branch of trade. In 'the following columns will be found statistics concerning its extent and position, which cannot fail but prove of interest to the commer-

cial community.

"The position which the Chicago and Canadian trade has assumed within a year or two may be learned from an article in this review, which contains several valuable statistical tables. Our relations with Canada are of great importance, and our trade with our neighbors across the line is annually on the increase.

"In coal, salt, high wines, hides, cheese, butter, and many other important branches of trade, will be found a large increase on the business of 1856. Of course, even with this increase, we must take into account the general condition of the country during the past few months, which has no doubt operated to lessen the figures to a considerable extent.

"The growth of our lake commerce is worthy of some space in our review, and we have presented some statistics showing its growth and position. We give lists of steamers, propellers and sail vessels engaged in

the general merchandise business of our city.

"We also give the rates which exchange on New York, Buffalo and St. Louis have commanded each week during the past four years. It is quite an interesting table and could not be well omitted in giving a general

view of our trade and commerce.

"The shipping interest in our city is now large and extensive, and demands some attention. A carefully prepared table of the rates of freights for carrying wheat and corn to Buffalo and Oswego, will be found in this review."

The following table shows the amount of some of the leading articles transported on the Illinois & Michigan Canal each year since its completion:

TOTAL IMPORTS AND EXPORTS.—Below will be found a table showing the total imports and exports by lake, canal and railroads during 1857. We have spared neither pains nor expense to make it perfect, and so far as the books in our public offices are accurate, will this statement be found correct. The imports have, as a general thing, been properly classified, and may be relied upon; but the system of classification in regard to our exports is so general, that it is altogether impossible to make up a complete table from their books. We find that the item under the head of "merchandise" is made to include almost every article of trade, from a needle to an anchor. We trust that we will be able to report a better state of affairs next year. It is an important matter to know how much we export and import, and we are happy to learn that some of our railway companies are beginning to appreciate this, and classify and systematize more:

#### STATEMENT

Showing the Comparative Receipts and Shipments by Lake, Canal and Railroad for 1857.

## AUXILIARY AGENCIES.

In the foregoing pages the development of the trade, commerce and manufactures of Chicago have been traced from the beginning to a period when the city had attained the foremost rank among the commercial cities of the country. Thus far, the record has been of results, and of a progress so rapid as to be phenomenal. Such progress was not the result of chance, nor of what is sometimes termed good fortune. It was the result of a combination of energetic causes, rather than a combination of favorable circumstances; causes as remarkable as the growth of the city itself. Due allowance being made for all the natural advantages arising from its geographical location, and the fertility and productiveness of the tributary country, the unprecedented growth of Chicago is more largely attributable to human foresight, courage, energy and enterprise than any other modern city in the world.

So late as June, 1825, Prof. William H. Keating,

the geologist and historiographer, with Major Long's second expedition, at the close of a most disparaging discription of Chicago and the surrounding country, said: "The dangers attending the navigation of the lake, and the scarcity of harbors along the shore, must ever prove an obstacle to the increase of the commercial importance of Chicago. The extent of the sand banks which are formed on the eastern and southern shore by the prevailing north and north-westerly winds, will likewise prevent any important works from being undertaken to improve the port of Chicago," In 1832. Milwaukee, eighty-five miles north, and Michigan City, twenty-five miles south, at the head of the lake, were both considered as likely to become great trade centers as Chicago. Only the residents of Chicago had supreme faith in her future. No city ever started under more discouraging conditions. The site was on a level so low that the waves of the lake, when driven by eastern storms submerged half the ground on which the present city is built, and inundations from the spring freshets were frequent when the Desplaines River, overflowing its banks joined its waters with those of the South Branch of the Chicago River, and sought an outlet through its low banked channel at the site of the amphibious town.

It is unnecessary to include in speculations as to the causes which brought together at such an unpromising spot, the wonderful aggregation of human energy which has overcome every natural obstacle, and built a city, where under other conditions no city would have been. In twenty years all was changed. The river creeping in tortuous course behind forbidding sand-bars to its shallow outlet had been made straight, and, through wide opening piers, welcomed to a safe haven the stormtossed ships. Wharfs and docks, and warehouses lined its banks where trees had stood before, and forests of masts lined its borders. The city had been lifted, and stood on dry ground, high above the flood. The waters of the Desplaines no longer threatened devastation, but, turned into an artificial channel, bore a never ceasing flood of wealth to the city, vieing in beneficent service with a dozen lines of railway, converging to this common center, and reaching their iron arms far out to the north, to the south, to the east and to the west.

The energy which had wrought such changes and achieved such wonderful results had one peculiar characteristic. It was prophetic, ever, in its immeasurable faith, providing for what was to come. The sudden avalanche of grain which came to Chicago with the completion of the canal, constantly increasing as each newly built railroad added to its volume, ever found waiting buyers, and shippers, and warehouses and elevators of ample capacity, ready built for the trade. The city has thus from the beginning always been found prepared to avail herself of each new branch of trade which has come to her; hence, no opportunity has been lost to her by being taken unawares, and no advantage wasted, however pressing or unexpected its appearance, for want of foresight in preparation or courageous promptness in its appropriation.

At the beginning of the commercial history of Chicago the avenues of trade, whether for the export and import of merchandise by lake, or the receipt and distribution inland, was restricted by most serious natural obstacles. Until 1834, there was no harbor. A sand-bar ran across the present mouth of the river, and the roadstead outside, unprotected by headlands, made what is now the safe harbor of Chicago a point on the western shore to be avoided, except in mild weather, when vessels might ride quietly at anchor off shore,

while their cargoes and passengers were debarked and landed by the primitive means of lighters.

Leading inland from Chicago were no roads that were passable. The land was a low, damp prairie, which, in the wet seasons of spring and fall, became little better than a bog, over which the roads were well migh useless for heavy teams, except in the dryest summer or the coldest winter. The radius of country tributary to Chicago was thus measured by the facilities for transportation. No farmer could safely bring a load of corn or wheat from a further distance than fifty miles with any expectation of profit. So, at the beginning, the radius of country directly tributary to Chicago as a grain mart may be safely set at that distance. The notable exceptions to the restrictions was in the marketing of cattle, sheep and horses, which could be driven in, thus being made to transport themselves to market. The first, and most important, commercial need of Chicago was better means of transportation centering at the chosen site of the great city.

PLANK ROADS superseded the primitive roadways over all the important thoroughfares leading from the city at a quite early date; thus essentially enlarging the area of trade subsidiary to the city. The Southwestern Plank Road, left the "Bull's Head" on Madison Street, and passed through Lyonsville to Brush Hill, near what is now LaGrange Station, on the Chicago, Burlington & Quincy Railroad, a distance of sixteen miles. From that point the Oswego Plank Road extended fourteen miles further in a southwestern direction, to the Naperville settlement. The Northwestern Plank Road started from the Galena depot, and extended seventeen miles to the present village of Desplaines in Maine Township. Seven miles out the Western Plank Road branched off toward Elgin, running, in 1853, some twelve miles in that direction. The Southern Plank Road started on State Street, at the south line of the city, and extended ten miles in a southerly direction toward Iroquois County. There were also projected in 1853, the Blue Island Plank Road, from that village due north to the southwest corner of the city; thence along Blue Island Avenue, which the City Council had planked to Madison Street; and the Lake Shore Plank Road, which commenced at the north line of the city on Clark Street, from thence it ran northwardly, nearly parallel with the lake shore by Rees & Hundley's tavern, through Pine Grove to Little River, and thence to Hood's tavern on the Green Bay Road.

These roads raised the mud embargo, which had before hampered the country trade a good part of each year, and greatly enlarged the circle of country that sought Chicago as a market.

THE ILLINOIS & MICHIGAN CANAL, completed in 1848, was the first great feeder, and remained, for many years, the most important avenue of transportation between the city and the interior of the State. During the five years, from 1850 to 1857, railroads were built in all directions centering in Chicago, and at the latter date the present magnificent system of transportation, which has since so developed in magnitude as to reach all points in the United States, the Canadas, and Mexico, was fairly inaugurated, and in such manner as to secure to Chicago the position she has come to hold as the great railroad center of the continent.

THE IMPROVEMENT OF THE HARBOR, or rather the building of the harbor, the dredging and straightening of the river, and the building of docks and wharves for the convenience of the immense commerce which the improved means of land transportation had centered in the city, kept even pace with those enterprises. In the summer of 1833 the first pier was built, and in the spring of 1834 the first sand-bar had disappeared, and thereafter Chicago was open to a commerce which has

increased each year until the present time.\*

Customs.- Up to 1846, Chicago belonged to the Collection District of Detroit, being a port of delivery only. All the statistics pertaining to customs, foreign and lake trade were merged in the general reports of the whole district at Detroit. July 16, 1846, the new District of Chicago was created embracing in its jurisdiction the harbors, rivers and waters on the western shore of Lake Michigan as far north as the town and river of Sheboygan, and as far south as the dividing line between the States of Illinois and Indiana. Chicago at that time became a port of entry,† thus being recognized by the Government, and placed on an equal commercial footing with other American ports of the first class. The lake trade did not show a large foreign element in early years as is evinced by the following extracts from the Chicago Weekly Democrat. September 26, 1848, it said:

"Before 1846 there was no foreign trade at this point. In that year there was but \$14.10 received in payment of duties. In 1847, however, the following descriptions of goods were received here, paying duties to the amount below: Fire wood, 256½ cords; peaches, 2 bbls.; saddles, 1. The duties received on these articles amounted to \$768.13, the value of articles was

\$1,182.90.

"In 1848, to September 1, the following is the amount of dutiable goods imported: St. Urbes salt, 7,100 minots; sea oil, 18 barrels; cod oil, 68 barrels; mackerel, 150 barrels; salmon 10 barrels; herring, 21 barrels and 100 boxes; charcoal, 19 barrels; lumber, 149,900 feet; stone, 13 cords; wood, 142 cords; shingles, 2 bundles; crockery, 8 crates. The value of the above articles was \$6,600.70, and the duty \$1,629.48. The total value of articles paying duty at this point imported since Chicago was make a port of entry has been \$7,-783.60, and the duty collected \$2,411.71."

The first importation of foreign goods from the Atlantic was in 1848. It consisted of a cargo of salt, directed from Turk's Island, aboard the brig "McBride." The vessel passed through the Gulf of St. Lawrence, and Canada waters, in bond, the duties being paid at the custom house in Chicago on its arrival, December 4. The Chicago Democrat of December 12, 1848, states that this was the first shipment ever made from the Atlantic direct to any port on the upper lakes, and adds that it passed through the Lachine and Welland canals.

The following tables furnished by the Revenue

Department at Washington, give the statistical history of the port, for the twenty years succeeding its establishment.†

Statement of the names of collectors, with dates of their first official bonds, for the port of Chicago, Ill., from July 16, 1846, to June 30, 1871.

Number of employés at the port of Chicago for the year 1847 was three; for the year 1850, five; for 1860, thirteen; and for 1870, thirty-seven.

Statistics furnished by J. Edward Wilkins, British Consul at Chicago, in 1856, gave the extent of trade between Chicago and Canadian ports, carried on in British vessels, to have been as follows:

#### IMPORTS

	Vessels.	Tons.		
1854	5 77	1,193	28,856 6 8	138,520
1856, to Nov. 1	95	22,664	40,892 8 4	194,843

#### EXPORTS

	Vessels.	Tons.			
1854	6		£ 16,429 173,022		
1856, to Nov. 1		23.377	174,838	5.49	829,223

The total trade with Canada, via Collingwood, Michigan Central and other lines, together with that in British bottoms, was estimated by Governor Bross, in

1856, to aggregate \$2,500,000.

ELEVATORS.—Allusions to Newberry & Dole's first elevator have been quite frequent in the preceding pages. Their first warehouse, which could be called an elevator from its mechanical appliances for loading grain, was located on the north end of Rush-street bridge. From it, in 1839, was made the second shipment of wheat from Chicago. The wheat was bought from farmers' wagons, and hoisted to upper story by old-style pulley blocks, and rope, by hand-power. The three thousand six hundred and seventy-eight bushels comprising the shipment, were to be transferred to the brig "Osceola." How it was done was thus described in Bross' history: "The problem of loading it on the brig was solved by fixing a spout in one of the upper doors and making it gradually narrower till it reached the deck, where the wheat was discharged into boxes holding four bushels, weighed and transferred to the hold of the vessel. From the bins holding the wheat in the upper story a row of men was formed, who passed it in buckets, precisely similar to the means used to pass buckets of water at a fire before the introduction of engines."

This firm afterward built and operated a warehouse and elevator; but on account of the increase in business, man-power gave place to horse-power in the elevating and transferring of the wheat. A bucket-belt, not unlike those now in use, was used to raise the grain to the upper story; and not only was the wheat elevated, but, in course of time, the horse also, "The endless treadle on which the horse traveled," says Mr. Bross, "was in the way, and, besides, it made a great deal of noise. Hence his tramway was transferred to the upper story, and with straps and pulleys a party of sailors soon transferred the faithful animal to the same locality, where he lived and traveled seven years without ever again setting foot on terra firma." The unfortunate animals who operated the elevating apparatus, continued in vogue for a number of years. The following concerning the wheat warehouses, or grain elevators, is copied from the Chicago Daily American, March 18, 1842. Speaking of new elevators it said:

"That run by H. Norton & Co. is the largest, being one hundred by forty feet in size. It is on the Reservation. Work in this mill will be performed by horses. The wheat, instead of being shipped from it by the usual slow and tedious process, will, after being raised to the upper story by means of elevators not unlike the revolving buckets of the dredging machine, glide thence into the hold of the vessel in double quick time. That of Smith & Webster, on the corner of South Water and Dearborn streets, is also a great addition to our city. This, and the fine one of J. D. Merritt near it, has greatly improved the appearance of South Water Street. Five more warehouses will be put up the coming season—two on the Reservation, just above Clark-street bridge, one on the north and the other on the south side of the river, and one on the South Branch, near Lake Street."

The use of steam-power in the place of horse-power was not applied until 1548, and for years afterward was not in general use. J. S. Wright, in his history of "Chicago, Past, Present and Future," published in 1870, page 157, shows something of the condition of the elevator and warehouse business in 1848 and succeeding years.

The quotation is as follows:

"STEAM ELEVATORS,—Such amounts of grain could never be handled in reasonable time for western operators, except by steam machinery. It seems like magic to compare present facilities with Mr. Dole's horse-power elevator which, with Messrs, Peck's, Wheeler's, Walker's and others, supplied requisite facilities, till that ingenious spirit, Captain R. C. Bristol, erected in 1848 the first steam elevator. Mr. Wheeler says that down to January 1, 1855, the whole storage room was not over seven hundred and fifty thousand bushels. So that the total only thirteen years ago, was but little over the average of one of seventeen elevators now, and every one

before 1855 has gone out of use. " Along the river, and South Branch, and lake basin, these huge, somber piles of two by six and two by twelve joisting, laid flat, rise high above surrounding structures. Their sides studded with iron plates, which are heads of large rods to hold against lateral pressure, bespeak the heavy stores they safely hold. Thinking an account of the modus operandi would be interesting, I went for information to the elevator last built by Messrs. Armour, Dole & Co., which was certain to have all improvements. An old settler, Mr. Baker, was in charge, who began to build in 1854 the elevator of Messrs. Gibbs & Griffin on a lot leased by me to them. After politely showing me through and explaining the operation, I asked him for the further favor of writing out what he had spoken, and here you have it :-

"Chicago has superior advantages in handling and storing grain, not only on account of steam elevators, but in absence of current, and the even stage of water. These are serious inconveniences on the Mississippi, and other large Western rivers. Then the wide prairie affords ample yard-room for cars, which the railroads and proprietors of elevators have wisely provided.

"Few persons, however, even of the old settlers in Chicago, have correct ideas of the ease and speed with which grain is handled. This is the modus operandi of Messrs. Armour, Dole & Co's new elevator on the South Branch, running from the C. B. & Q. R. R.

o'The building is three hundred and twelve feet long, eighty-four feet wide and one hundred and thirty feet high, machinery driven by a four hundred horse-power engine. It is divided into one hundred and fifty bins, sixty-five feet deep, with storage capacity of one million two hundred and fifty thousand bushels. The yard will hold three hundred or four hundred cars. Two switch engines, when in full operation, are required to put in and take out cars. Two tracks receive each ten cars,

unloaded at once in six to eight minutes, each car having its elevator, conveying the grain to its large hopperscale in the top of the building. There weighed, it is spouted to the bin appropriated to that kind and quality. To carry grain to the several bins renders the elevation necessary. Allowing fifteen minutes to unload each set of ten cars, four hundred are unloaded in ten hours, about one hundred and forty thousand bushels.

"Shipping facilities equal receiving, there being six elevators for that work, handling each three hundred bushels per hour, or one hundred and eighty thousand bushels in ten hours. The grain is run out of the bins to another set of elevators, which throw into large hoppers at the top of the building, in which it is weighed, and sent down in spouts into the hold of the vessel. The same company have another elevator on the opposite side of the slip—for a slip at right angles to the South Branch is cut to lay vessels alongside the warehouseand ten other large elevators and five smaller, afford the same facilities. Any one of thirteen of them, too, will unload a canal boat of five thousand or six thousand bushels, in an hour and a half to two hours; an aggregate from sixty-five canal boats alone of three hundred and fifty-seven thousand bushels in ten hours."

From the foregoing extract it would appear that steam-power was first introduced in 1848, by R. C. Bristoll. It was not until a much later day that steam-

power entirely superseded horse-power.

In the report of "city improvements," made by the Chicago Democratic Press, January 1, 1855, for the

year 1854, appears the following:

"Grain Warehouse, on North Water Street and the river, for Gibbs, Griffin & Co. This is one of the gigantic grain houses which are being called into existence by the urgent want of storage room which it is easy to see must exist in a city which receives in a single season over fifteen million bushels of grain, with no prospect of its ever being any less. River front sixty feet, Galena Railroad front one hundred and ten feet, depth one hundred and ninety feet, and eighty-seven feet high. Built of timber, inclosed with brick, and calculated to hold over five hundred thousand bushels of grain; two million feet of lumber used in its construction; architects, Burling & Baumann; mason, William Mortimer; carpenters, Baker & McEwen; machinist, Mr. Miller. Cost, \$75,000."

In 1855, Sturges & Buckingham built, under an arrangement with the Illinois Central Railroad Company, what was, at the time considered, as expressed in the newspapers of the time, an enormous grain house. It was on the east side of the freight depot, and east of the basin that connected with the Chicago River. It was built of Milwaukee brick, was one hundred by two hundred feet in size, capable of holding eight hundred thousand bushels of grain, and cost \$76,000.

The Press, in describing this elevator already built, said: "The same party is to erect, during the coming spring, a similar grain house, east of the present one. Its dimensions are to be one hundred by two hundred and thirty feet."

In January, 1858, the Democratic Press had the following description of the latest and largest elevator

in the city:

"Our attentive correspondent Rural gave the readers of the Press a few days since a minute description of the mammoth grain warehouse of Messrs, Sturges & Buckingham, at 'the Illinois Central depot. Much as we have read about them—for they had before been noticed in these columns—till yesterday, when we visited them, we had no adequate conception of their gigantic proportions or the perfection of their arrangements in every particular. The buildings are one hundred and three by two hundred and four feet, and one hundred and twenty feet high. In the operation of the machinery the grain is elevated one hundred and twenty-eight feet. The cost of the buildings complete will be about \$200,ooo each. The machinery for handling the grain is worked by four steam engines, in each building, and every part of it is perfect in every particular. The brick walls are bound together by massive bolts only a few feet apart, and to give some idea of the amount of timber used, we state that twenty-nine ship loads were used during the last summer in the construction of the building now being completed. Two hundred and thirty-six car loads of grain were unloaded by one of the houses last summer in one day, and the amount of grain handled was between eighty and ninety thousand bushels. It is safe to say that each house can handle a hundred thousand bushels per day. Strangers at a distance can form some idea of the facilities for handling grain in this city from the above facts. And if, with the lands along the line of the Illinois Central Railroad only sparsely settled, a single firm has found it necessary to make so large an investment to accommodate the business now offering, what will the grain trade become when all the vast fertile prairies between Chicago and Cairo shall be covered with waving harvests? That day is not distant, and already does the enterprising, indomitable proprietor, Mr. Sturges, begin to look forward to a third house of equal proportions to accommodate the stupendous business which his magnificent road is beginning to pour into the lap of our city.

"We would that every farmer in the State could have gone with us through these immense warehouses, and, like ourselves, he could not have resisted the emotions of thankfulness and honest pride, that Providence has east our lot in so goodly a land. The all-wise Creator has wrought on a vast scale in our beautiful valley, and it requires vast enterprise to provide for the development of the resources which His bounty has provided. We are glad to welcome Mr. Sturges to our city as a permanent resident, for he is one of the men who has the intelligence to appreciate the resources of the West, and also the capital to provide means for their adequate

accommodation."

Up to 1857 the warehouse and elevator business had developed in full ratio with the requirements of the trade. An elevator, merely for the elevating of wheat, and its transfer to vessels had become inadequate to the wants of the trade, and an "elevator" had come to mean not only a means for shipping, but a repository for the storage of wheat, and the elevators of 1857 were also the store-houses wherein were held all the grain of the city, until such time as it might be required for delivery or shipment. An elevator had thus come to mean, in 1857, a store-house for grain, as well as a facility for shipping. The houses were partitioned into huge bins, into which the various grades were put for storage, either in special lots to be delivered in kind; or in general bins to be delivered according to grade. The issuing of receipts from these warehouses, with the grade of the wheat attached, began in 1857, and thus placed wheat in the list of articles which could be called purely speculative. The era of speculation in wheat dates from the issue of the first general warehouse receipt, in which the grade of the wheat was specified, and in which it was promised that a like grade should be delivered on

Following is a table showing the status of the ware-houses of Chicago in 1857:

## THE CHICAGO BOARD OF TRADE.

The subject of organizing a Board of Trade in Chicago was first brought to public notice through a communication which appeared in the Chicago Daily American of December 4, 1841, over the signature of "Merchant." The writer said: "It is a subject upon which I have thought much, and in my experience of several years trading in the city, I have often known instances of much trouble and vexation that might have been avoided through the interference of some such institution, and I have several times thought of calling the attention of the mercantile community to its importance. It would be greatly to the interest of us all, were some active measures taken in regard to it." The early seed thus sown by this unknown merchant seems to have fallen on barren ground. It does not appear that his suggestions awakened any response in the mercantile breasts of the community.

The year 1848 saw the first infantile struggles of the Chicago Board of Trade. Under the head of "The Beginning," Colbert's History of Chicago, p. 48, has the

following:

"Early in the year 1848—a time anterior to the introduction of the iron-horse, which now snorts over the broad and fertile prairies of Illinois—long before elevators of one million bushels capacity were even thought of—a time when the clearance of a lumber schooner from this port received a "local" notice—when elevators used horses as a motive power. Thomas Richmond and W. L. Whiting, discussed one afternoon the propriety of establishing a Board of Trade in Chicago.

Mr. Richmond was then in the elevating business, and Mr. Whiting a grain broker—the first who pursued this vocation in Chicago. These gentlemen consulted with other business men, and the result of this consultation was an invitation published at the time for the merchants generally to meet together on the 13th of March, 1848, to take the initiatory steps in regard to the formation of the Chicago Board of Trade. The following is a copy of the call:

Merchants and business men who are favorable to the establishment of a Board of Trade in this city, are requested to meet at the office of W. L. Whiting, on the 13th (March, 1848,) at three o'clock, P. M.

Wadsworth, Dyer & Chapin, George Steel, I. H. Burch & Co., Gurnee, Hayden & Co., H. H. Magie & Co., Neef & Church, John H. Kinzie, Norton, Walter & Co. De Wolf & Co., Charles Walker, Thomas Richmond, Thomas Hale, Raymond, Gibbs & Co.

"At this meeting nothing further was done than to pass resolutions stating that the growing trade of Chicago demanded the establishment of a Board of Trade. A constitution was then adopted and a committee appointed to draw up by-laws to be submitted at an adjourned meeting to be held on the first Monday in April following, when they were adopted. All interested were invited to meet daily at the rooms of the Board over Gage & Haines's flour store, on South Water Street, which had been rented at \$110 per annum. George Smith was elected president, but declining to serve. Thomas Dver was chosen in his stead. Charles Walker and John P. Chapin were chosen first and second vice-presidents, and G. S. Hubbard, E. S. Wadsworth, George Steel, Thomas Richmond, John Rogers, H. G. Loomis, George F. Foster, K. C. Bristol, J. H. Dunham, Thomas Dyer, G. A. Gibbs, John H. Kinzie, C. Beers, W. S. Gurnee, J. H. Reed, E. K. Rogers, I. H. Burch, A. H. Burley, John V. Read, W. B. Ogden, O. Lunt, Thomas Hale, E. W. Hadduck, I. V. Germain, and L. P. Hillard were appointed directors.'

The members of the board at the time of its organization were as follows: Gurdon S. Hubbard, E. S. Wadsworth, Matthew Laffin, George Smith, Orrington Lunt, Ira V. Germain, J. B. F. Russell, Theron Pardee, Thomas Dyer, D. Humphrey, H. J. Winslow, George F. Foster, John King, Jr., James H. Rochester, Isaac Hardy, Zenas Cobb, Jr., R. C. Bristoll, I. H. Dunham, A. V. G. D'Wolf, Almond Walker, H. H. Harrison, William F. DeWolf, James Winn, J. H. Reed, James H. Carpenter, J. P. Hotchkiss, John High Jr., S. L. Brown, J. R. Case, Joseph T. Ryerson, Andrew Blaikie, I. Whitcomb, George A. Gibbs, G. M. Higginson, Jared Gage, Sylvester Marsh, E. H. Hådduck, John P. Chapin, George Steel, J. H. Kenzie, John Rogers, Thomas Richmond, Thomas Hale, James Peck, George C. Drew, T. V. G. Loomis, B. W. Raymond, John W. Shoemaker, Albert Neeley, Joseph R. Beals, Amos G. Throop, John L. Marsh, E. K. Rogers, C. Beers, L. P. Hilliard, John C. Dodge, John Pearson, Thomas Thompson, W. S. Gurnee, Alexander Brand, Charles Walker, Allen Richmond, M. C. Stearns, O. Sherman, G. A. Robb, H. R. Payson, A. H. Burley, I. H. Burch, W. H. Clarke, J. C. Walter, J. A. Smith, T. S. Morgan, W. L. Whiting, John S. Reed, Thomas B. Carter, T. L. Parker, F. A. Stockbridge, Julian S. Rumsey, C. L. Harmon, John C. Haines, William B. Ogden, and Jabez B. Foster.—Total membership, eighty-two.

The organization as at first effected was not a corporate body. It had no legal status, being only a vol-

untary organization for the purpose of facilitating the business of the city and promoting her commercial interests by more united action than heretofore. At that time there was no general State statute under which a corporate organization of this kind could have been effected. So the functions of the Board in its early days were advisory rather than authoritative, and its many regulations, resolutions, and mandates commanded observance and respect only in accordance with the amount of common sense or wisdom they embodied, and from the respectable character of the mercantile body whose sentiments they promulgated. It was, however, the center of deliberation on nearly every question in which Chicago had an interest, from the time of its organization, and on nearly all of them it held pronounced views, on one side or the other, to which it gave public utterance through resolutions, manifestos, petitions to the Legislature and Congress, and by the appointment of committees to advise with the outside elements and report. Thus the early influence of this body, however great or important a factor it may have been in molding the commercial destinies of the city, or regulating and bringing into order its methods of business, were less apparent than actual.

At the first meeting of the Board, held in April 1848, Gurdon S. Hubbard, Sylvester Marsh and John Rogers were appointed Inspectors of Fish and Provisions, and John Rogers and James L. Hare, Inspectors of Flour. This was the first move ever made in the city toward securing uniformity in grades, or guaranteeing the quality of any of the merchantable products sold. As these officers had no legal authority to enforce an inspection, a committee of the Board was chosen to wait upon the City Council and ask the passage of an ordinance for the government of inspectors, whereby their offices might be recognized under the municipal law.

During the same year a committee on banks, chosen by the Board, reported a plan for a general system of State banking, which, with slight amendments, was adopted, and the committee requested to frame a bill in accordance with the amended report; to present it to the Legislature, and urge its passage. The committee were also instructed to secure a charter for the Board. The action of this committee resulted in the passage of a general act, February 8, 1849, for the establishment of Boards of Trade and Chambers of Commerce, under the provisions of which the Board was subsequently reorganized.

At the first annual meeting, held April 13, 1849, Thomas Dyer was re-elected president, and John P. Chapin and C. Walker as vice-presidents. John C. Dodge was chosen secretary and W. L. Whiting treasurer. Several public matters claimed the attention of the Board. The spring freshet of that year was the most disastrous that had ever occurred, totally destroying nearly evey bridge in the city. The Board appointed a committee to devise means for facilitating intercourse with the North and West sides and the outlying settlements. The action of this city is not a matter of record.

The obtaining of daily telegraphic market reports for the benefit of members of the Board was for the first time discussed at the first annual meeting, and a committee appointed to confer with the telegraph companies.

The city authorities seem to have worked in confidential harmony with the Board, as is evinced in the fact that during the year they issued bonds for the improvement of the harbor, after the great freshet, amounting to \$1,000, which were turned over to the

Board to be negotiated, and the proceeds expended for the purpose mentioned under its direction. The Board accepted the trust, and doubtless made the money go

as far as possible in dredging out the river.

The tolls on the canal, which on through freight to and from the Mississippi and from that river to tide water, and resolutions were passed favoring a rebate on the tolls on such shipments. The importance of further telegraphic extensions was discussed, and the discussions brought forth a series of resolutions favoring and earnestly urging such extension. The hour of meeting was changed from 9 to 9:30 A. M., the old hour having been found too early to insure a full attendance.

Although the proceedings of the Board had been sometimes Pickwickian in its discussions, and perhaps more miscellaneous than practical in its treatment of nearly every subject, however remotely it might concern the city, it had, by ignoring nothing, managed to have its say on everything. It had thus, during the first two years, not only kept itself busy, but had been instrumental in doing much to promote the prosperity of the city and to place its growing commercial importance more prominently before the outside world. It was aggressive in its efforts to build up the trade of Chicago from the very beginning, and entered its second stage of life with a quite extensive, if not yet world wide, reputation.

Organization Under the State Law.—February 8, 1840, a general law relating to the establishment of boards of trade was passed by the State Legislature, and, at the annual meeting of the Board held in April, 1850, it was resolved to organize under its

provisions. It was also resolved:

"That this organization shall be called 'The Board

of Trade of the City of Chicago."

"Each member joining the association shall sign the constitution, and, with the exception of old members, pay five dollars, and in addition pay such sums semi-annually as shall be decided on by the vote of the Board.

"Annual and semi-annual meetings shall be held, and special meetings may be called at any time at the

written request of any five members."

The treasurer's report at this meeting showed a deficit in the treasury of \$1.46.20. To provide for this it was voted to raise the annual dues from two to three dollars. It was also resolved that the old members sign the new constitution which had been framed in accordance with the provisions of the State law, and pay three dollars each, to be applied to the payment of the outstanding debts of the old Board about to be superseded by the new and legally constituted body and that the office furniture be transferred to the new Board. It was then voted, "That the Board of Trade do now dissolve," and the voluntary organization ceased to exist.

The corporate life of the new Board began April 13, 1850, at which time the new constitution was presented for signatures. The following week the new organization was completed by the election of officers; the president, vice-president, treasurer and secretary of the old organization being re-elected. The new organization did not create any new enthusiasm or interest. In fact, the novelty having worn off, the membership decreased, in spite of the strenuous exertions of the officers and a few stanch supporters who appreciated its growing importance, as the trade of the city increased. The daily meetings were thinly attended, and the sessions devoid of interest except when some outside question

was brought up for discussion—16 promote a more general attendance, the daily hour of meeting w.s., gain changed; the hour being from 12 w. to 14 x. During the year the Board had in consideration the free navigation of the St. Lawrence River, which was earnestly favored by the members, who, through a committee, prepared a report bristing with arguments and replete with statistics favoring the object. The report was published, but the scheme itself fell through.

The improvement of the Illinois River, by the removal of the sand-bars, so as to render it navigible, came up for consideration, and it was decided by resolution of the Board, that means should be taken to dredge them out. Votes of thanks were given to the Illon, Stephen A. Douglas and General James Shields, for their successful efforts in obtaining from Congress the magnificent grants of land, which insured the completion of the Illinois Central Railroad, which had already been begun; also for their unsuccessful, but no less meritorious efforts, in advocating the free naviga-

tion of the St. Lawrence.

The third annual meeting in April, 1851, showed by the official reports presented a somewhat discouraging aspect of affairs. The membership had fallen off largely, the number of members having paid their dues and being otherwise in good standing, being only thirtyeight. The treasurer reported a deficit of \$165.96, with no provisions to supply it. He recommended an assessment of four dollars on each member to pay up the old score. The time of meeting was again changed, with the object of securing a larger daily attendance, the hour of session decided upon being from 11:30 A. M., to 12:30 P. M. A bye-law was adopted forbidding members from giving untruthful or bogus reports of their transactions, on pain of expulsion. This early effort of the Board to place itself on the basis of honesty, and to purge itself of duplicity and deceit in its transactions, is worthy of note. The old officers were re-elected. During the year interest in the organization was at an extremely low point. The daily attendance dropped to nearly nothing at times, and the business transactions "on Change" were proportionately insignificant. A record was kept during the year, from which the following excerpt is given:

July 9.—Present: C. Walker. No transactions. July 10.—Present: C. Walker, J. C. White, J. C.

Walter.

July 12.— Present: O. Lunt.
July 13.— Present: None.
July 14.— Present: None.
July 15.— Present: C. Walker,
July 16.— Present: None.
July 17.— Present: J. C. Walter,
July 18.— Present: J. C. Walter,
July 18.— Present: None,

It appears from the above that during the nine days, only five members had sufficient interest in the institution to put in an appearance at the place appointed for

daily sessions.

The interest in outside topics also sensibly waned during the year. The only subject considered being the improvement of the Illinois River, on which subject they so far took action as to appoint a delegation to attend the convention for the consideration of the matter, which was held at Peoria December 20. New rooms were rented at the corner of South Water and Clark streets, which were for the first time occupied at the fourth annual meeting, which occurred in April, 1852.

At this meeting, despite the dull and uninteresting year that had passed, the official reports were more encouraging. There had been an accession of fifteen members during the year, making a total of fifty-three, and the organization was out of debt. The election resulted in the choice of George Steele, president; Thomas Hale, vice-president; and John C. Dodge, secretary and treasurer. The new rooms did not seem to please the majority of members, and it was decided to move again, the rooms selected being those occupied by the secretary of the Chicago Mutual Insurance Company The next meeting was held at No. 3 Tremont Block. Late in the year it was decided to move again, to No. 8 Dearborn Street. In February, Mr. Dodge tendered his resignation, and James E. Dullaba was appointed to serve out the unexpired term. The retiring secretary assumed the lease of the rooms then occupied by the Board, and instructions were given to sell the carpet and furniture. It is presumed that the new rooms were already furnished, or that if in accordance with the old adage, "three moves are as bad as a fire," the carpet and furniture were not worth moving again. The Board took no important action on outside matters during the year, except in the passage of some earnest resolutions, protesting against the repeal of the banking laws then in force.

The fifth annual meeting was held at the new rooms, No. 8 Dearborn Street, in April, 1853. The officers elected were: Thomas Hale, president; C. H. Walker, vice-president; L. P. Hilliard, secretary and treasurer. The new rooms did not suit, indeed they had only been hired for temporary accommodation, until a fitting place for a permanent location could be obtained. A committee was chosen to confer with certain parties then building, with a view to obtaining a long lease of rooms adapted to the wants of the Board. The quarters were not, however, changed during the year. The hour of meeting was again changed to 10 o'clock A. M., and the secretary was ordered to provide refreshments for such as attended the daily sessions, and in accordance with instructions, thereafter set up a free lunch each day

consisting of crackers, cheese and ale.

Many important subjects were brought to the consideration of the Board during the year.' The project of establishing a bank to increase the then very limited and inadequate banking facilities of the city—the proposed capital was \$5,000,000, and resolutions passed the Board favoring its establishment. The harbor being still in a dangerous condition, a committee was appointed to take soundings, and to devise ways and means for the further improvement of the north channel. The Board also passed resolutions favoring a ship canal around Niagara Falls, on the American side. It also petitioned the City Council to make an appropriation for such improvements of the harbor as might be deemed necessary, and Thomas Hale and Orrington Lunt were appointed delegates to go to Washington to represent the harbor interests of Chicago, and to secure such favorable action of Congress as was possible. They started on their mission bearing credentials from the Board, and fortified with a full set of resolutions and memorials from that body. The improvement of the St. Clair flats came up for consideration, and delegates were appointed to attend a joint convention of delegates from all the lake cities, held in Detroit, for the purpose of devising some plan for carrying on the desired improvement.

The sixth annual meeting was held in April, 1854. The new officers chosen were: George A. Gibbs, president; W. D. Houghteling, vice-president: and James E. Dullaba, secretary and treasurer. New rooms were rented on the corner of Wells and South Water streets

over the store of Purington & Scranton at \$250 per annum. W. D. Wilson, in consideration for services as janitor, was allowed the use of the rooms. It was voted to print the constitution and by-laws and the names of officers and members in pamphlet form. Several public questions, as they came up during the year, were, as usual, acted on by the Board. A remonstrance was made against the proposed location of the Government office, it being considered to far from the present or prospective center of business. The remonstrance and all other means used by the Board failed to change the location.

A most important question, and one entirely relevant to the legitimate business for which the Board was organized, came up for the first time during this year. Hitherto all grains had been measured in the old-fashioned way in a half-bushel measure. The process was slow, unreliable and cumbersome. The trade, in its accumulating proportions, had already outgrown it. It was proposed by the Board that the Boards of Trade of Milwaukee, Detroit, Toledo, and other points be requested to use their influence to secure such legislation in their respective States as should result in the use of weights, instead of measures in the measuring of grain, seeds, etc. This action, first started by the Chicago Board, resulted ultimately in bringing about the desired reform, thereby opening the way for all the improved methods of inspecting, grading, storing, transporting, and transferring grain in bulk, all of which may be traced in their inception to this change; and none of which, under the old system of measurement, would

have been possible. The seventh annual meeting was held in April, 1855. The officers elected were: Hiram Wheeler, president; C. B. Pomeroy, vice-president, and W. W. Mitchell, secretary and treasurer. The time of meeting was changed to 11:30 A. M., but not proving beneficial, was subsequently altered again to 9:30 A.M. The secretary seems to have grown lax in his duties as a caterer, as it was voted to employ some one to furnish the daily lunch of "crackers, cheese and ale." A reading-room was instituted for the use of members, and newspapers from the cities of Boston, New York, Montreal, Buffalo, Oswego, Detroit and Cincinnati ordered to be subscribed for and kept on file. The important public questions acted on by the Board during the year was the project to build the Georgian Canal. The action of the Board and the final outcome of the enterprise are thus told in Colbert's history: "During this summer the project of the Georgian Bay Canal was actively discussed, and many urgent and imperative reasons were set forth in favor of its being built. On July 28, William Bross, of the Tribune, addressed a meeting of the Board, representing the advantages to be derived from the proposed canal, and introduced Thomas Steers, of Toronto, C. W., who read a communication from the Board of Trade of that city, showing its willingness to cooperate with the "board" of Oswego regarding a survey. Mr. Bross then offered a a resolution to the effect that the Chicago Board of Trade will cooperate with other boards having any interest in the matter) in the building of the Georgian Bay Canal, subject to the control and direction of the Canadian Government. A committee, consisting of William Bross and George Steele, went to Canada and advocated the measure. A charter of incorporation was afterward obtained, but beyond the breaking of ground and presenting the president of the company with the usual gift, nothing was done, and the subject has almost entirely passed away from the memory of those who were once its most earnest advocates.'

Sometime during the year a door-keeper was appointed. The free-lunch fiends had increased to such a degree as to seriously threaten the solvency of the institution. It was a flagrant abuse of hospitality, and, in the eyes of the more staid members, the free lunch was incompatible with the dignity which should attach to so important a body as the Board of Trade had become; while not a few had come to view the whole thing as an unmitigated and very costly nuisance. One disgusted member moved "that the Board will no longer be responsible for refreshments." His motion was lost, but, as a compromise, the door-keeper was chosen, whose duty it was to keep out all dead-heads whom he sus-

pected had unholy designs on the lunch.

The eighth annual meeting was held at the Tremont House, April 7, 1856. The Board was now fairly established, and was deemed of sufficient importance to make its membership desirable to most merchants of standing in the city. The day when it was necessary to canvass for new members was passed. At this meeting forty-five new members were elected. The officers elected were: C. H. Walker, president; G. C. Martin, vice-president, and W. W. Mitchell, secretary and treasurer. The meetings were ever after this time well attended. The lunch was abolished; cards of membership were issued, a regular door-keeper appointed; and the Board, having passed its days of adolescence, started on the more business-like career of actual usefulness. More pretentious and commodious quarters were taken. May I the Board took possession of the lower floor of Walker's building at a rental of \$1,200 per annum.

Rooms were rented in George Steele's building, on the corner of South Water and LaSalle streets, at a

rental of \$1,000 per year.

On the 6th of October one hundred and twenty-two

new members were admitted.

During this year the projects of erecting a building suitable for a Merchants' Exchange, was discussed, and a committee appointed to prepare plans, solicit subscriptions, etc. The members of the committee reported in November that they had individually purchased a piece of ground, at the corner of Clark and Washington streets, for the sum of \$180,000, suitable for the proposed building, which the Board could have at the price they had paid. The offer was accepted on the condition that a sufficient amount of stock could be obtained to carry out the purpose of building. The stock was not raised, and, for years after, the building project was not revived.

Action was taken on various matters of commercial importance during the year. At that time the Welland Canal had grown to be of great importance as an avenue of transportation of Western products to tide water. The shipments through the canal were so large as to render it a serious competitor for the carrying trade with the New York & Erie Canal, which, at an early day, enjoyed almost a monopoly of the business. freight thus diverted proved a like diminution in the trade of Buffalo, the western terminus of the Erie Canal. With the design of forcing the shipments back into their old channel, through Buffalo, a bill was presented in the New York Legislature, which, if passed, would establish a rate of tolls discriminating against all routes using the Welland Canal. Pending its passage resolutions were passed by the Chicago Board of Trade, protesting in the strongest terms against the injustice of the proposed scheme, and also urging all Canadian houses doing business in Chicago, to request their correspondents to memorialize the Canadian Government to enlarge the Welland Canal sufficiently to enable the larger vessels in the carrying trade to pass through Some further action was taken in conjunction with the St. Louis Chamber of Commerce, looking to the improvement of the Illinois River.

The first steps were taken this year for defining and grades of wheat. The standards established were to be designated as "white wheat" winter, "red wheat" winter, and "spring wheat." From this crude classification has been evolved the whole system of the grading and inspecting now in vogue, under rules so interring, that the grades are standard all over the commercial world, wherever

American wheat is known.

In April, 1857, the ninth annual meeting was held. The officers elected were; C. H. Walker, president, G. W. Noble, vice president, and W. W. Mitchell, secretary and treasurer. Seventy-three new members were admitted. It was resolved to employ a superintendent, at a salary of \$1,500. P. L. Wells was subsequently appointed to the position. He had been for several years before, the commercial editor of the Daily Press, and, since 1854, had published annual reports of the trade, commerce and manufactures of the city. They were the only compilations of commercial statistics of those years approaching anything like completeness or accuracy. His appointment opened to the Board a new department of usefulness. Under his direction a system of gathering, preserving and publishing the trade statistics of each year, was inaugurated by the Board, The first annual trade report was issued under his supervision in 1859. Since which time the Board has been the great depository and conservator of the statistics of Chicago trade.

In the summer a system of lumber inspection was adopted by the Board, and during the year sixty more

were added to the list of members.

The early history of the Board of Trade was uneventful and uninteresting, except that it is the history of an institution which has, from the small and apparently insignificant beginnings here chronicled, come to be the great central force which controls the husiness of half a continent and an important factor in the commerce of the whole civilized world. The crude efforts, often blindly made, to systematize business methods and unify the business interests and energies of the city, did not then show, save to the few gifted with extraordinary prescience, the wonderfully intricate and powerful instrumentality in directing and controlling trade and commerce it has since become. Nearly all the modern means, methods and facilities for transacting business or carrying on either local trade or foreign commerce, had their inception in the Board, and were in their perfection evolved from its action.

The inspection, warehousing and shipping of grain, in well-defined and standard grades; the standards of inspection of flour, pork, beef, lard, butter, lumber, etc., were all primarily established and ultimately perfected through its action. The rapid dissemination and interchange of reliable commercial news and market quotations was evolved from the mutual necessities of the boards of trade in the business centers of the world. The system of gathering all important commercial statistics has been carried to a point of comprehensiveness and accuracy far beyond that of the Government bureau of statistics. It has also become an essential agency in the direction of State and national legislation on all commercial questions. Its resolutions and suggestions, although made in less high-sounding phrase. with less all-absorbing frequency, and with less youthful fervor than formerly, carry with them now a tone of

authority which seldom passes unheeded. Much of the commercial law of to-day has grown out of questions brought to the notice of the courts through the transactions of its members and the rules established by the Board. The statutes pertaining to inspection, warehousing, and many others were the direct outgrowth of its action. The daily gathering on the floor, the Babel of trade, where more business is done than in any like place in the world, is, although the most conspicuous, thus seen to be but one of many phases of its executive work. In all great crises the Board has come to be the true index of the patriotism, the benevolence and humanity of its members, no less than that of their combined business force. Witness their acts of humanity when Chicago went up in flame and smoke, and their never failing lovalty and patriotism in the dark and troublons times of the Rebellion. The history of these years will in future volumes constitute the brightest pages in its annals.

In the efforts to facilitate legitimate trade, it will be curious to note how has been necessarily evolved the most tempting facilities for speculative trade, even to the point of gambling, pure and simple. So long as a trade involved the necessity of an actual delivery or receipt of the goods sold or bought there was little inducement for speculators to overtrade, since the consummation of each trade involved the expenditure of such large amount of labor and time. The storing of wheat in specified grades of an acknowledged standard. and the issuing of warehouse receipts for the same, placed wheat on the list of speculative articles so soon as the receipts came to be acknowledged as a delivery on a sale, thus mobilizing the article to that extent that large deliveries could be momentarily tendered on a sale at any specified hour. Such delivery had not before been possible. Thus the reader who follows the history of the Board through the subsequent years will observe how the spirit of speculative gambling has been a natural outgrowth of the necessitics of legitimate trade, and how, with the establishment of acknowledged grades of inspection, and their mobilization for speculative purposes through their representation by warehouse receipts, one after another, the various food products, as they came to be stored in sufficient quantity, have been added to the speculative list. Wheat, corn, rye, barley, oats, flour, pork, lard, butter, oil, have come successively to add volume to the speculative material, and the volume of speculative trading has grown in a tenfold ratio to that of the increasing basis, Reports of daily transactions on the Board have ceased to show the volume of legitimate trade, except when correlated with other known facts. It is not now uncommon, on an excited market, for the entire available stock of one of these articles to be sold and resold a dozen times in a single day.

Speculative trading in grain and provisions, as now developed, was entirely unknown during the period treated in this volume. It is of purely Western origin, and its birthplace was the Board of Trade of Chicago., It will not be the least interesting part of its future history to trace it from its legitimate birth, through all its stages of development, to the present reckless and riotous period of its life. This early sketch may therefore be deemed of more than passing interest, since it is but the necessary introduction to what in the succeeding years will prove a most interesting historic topic concerning the development of Western trade and commerce, and the unique experiences of Western business men.

The principal officers of the Board of Trade of Chicago, from its organization to 1857, were as below

given:

\* Mr. Dodge resigned in February, 1853. Mr. Dullaba served by appointment the unexpired time.

Subjoined are personal sketches of the several presidents of the Board. Hon. Thomas Dyer is mentioned in the political chapter, he having filled the office of Mayor of Chicago.

Charles Walker, the eldest son of William W. and Lucretia Walker, was born at Plainfield, Otsego Co., N. Y., February 2, 1802. Here and at Unadilla Forks he both attended and taught school. At the latter place he clerked in a store and also engaged in business for himself. In 1824 he removed to Burlington Flats, continuing as a merchant, and gradually adding to his other business a grist mill, a saw mill, a potash factory and a tannery. In a few years he was doing the largest business in these branches in that section of the country. He established himself at this point with a capital of

\$1.350, \$1,000 of which was borrowed. Mr. Walker continued in business at various points in the State, engaging in the grain and cattle trade, and by close and judicious management he prospered finely until 1828. During that year, however, all his savings were swept away, a large amount of cheese, butter and pork which he had shipped to the South being greatly damaged at sea. In the autumn of 1834 he sent his brother Almond to Chicago with a large stock of boots, shoes and leather, and during the succeeding spring he arrived himself, although he did not make the city his permanent home. He at once invested in real estate and otherwise showed the confidence he felt in the future supremacy of Chicago. In 1836 Mr. Walker admitted E. B. Hulbert to partnership, the firm name being C.

& A. Walker, and their business being the importation of farming implements from the East, besides carrying a general stock of goods. He weathered the storm of 1837, and in 1839 shipped the first grain from Chicago to the East. It consisted of thirty-nine bags of wheat, which he sent to his mills at Burlington Flats, Otsego County. During this period Mr. Walker divided his time about equally between Chicago and the State of New York, but by 1845 his business had so increased at the former point that he decided to remove hither. Accordingly he formed a partnership in Utica, N. V., with Cyrus Clark, his brother-in-law, under the firm name of Walker & Clark, for the purpose of receiving Western produce. In May, 1845, he removed his family to Chicago. Although the crisis in the grain trade seriously affected Mr. Walker's business, his house continued to hold its position as the leading grain and produce establishment in the West. In 1851 C. Walker & Son, of Chicago; Walker & Kellogg, of Peoria, and Walker & Clark, of Buffalo, were the largest grain purchasers in the United States. At this period a severe attack of cholera made it necessary for Mr. Walker to leave the active management of his affairs to his eldest son, Charles H. Walker, who continued the business under the firm of C. Walker & Son, and C. Walker & Sons, until 1855, when the father was obliged to retire from business altogether. The management of the house was now left to his two sons and others, who continued the same under the firm of Walker, Bronson & Co. During the year 1856-57 the firm handled over 5,225,000 bushels of grain. As is usually the case with men who have successfully managed their private affairs, Mr. Walker was called to several public posts of responsibility. He was one of the original directors of the Chicago & Galena Union Railroad in 1847-48, taking an active part in its management from first to last, and also in 1856 acting as president and one of the main directors of the Chicago, Iowa & Nebraska line, which was intended to be a continuation of the Galena road. Mr. Walker was the second president of the Board of Trade, serving for three years from 1849. His death occurred June 28, 1869. Mr. Walker was twice married—the first time to Mary Clarke, at Unadilla Forks, and the second time to Nancy Bentley, at Lebanon Springs, N. Y.

C. H. WALKER, the eldest son of the above, who assumed the managment of his father's extensive interests when he retired from business, was himself president of the Board of Trade in 1856 and 1857. Mr. Walker is now a resident of St. Mary's Parish, La. George C. and William B. Walker, also sons of Charles, are members of the prosperous commission house of George C. Walker & Co. There is one other child living, a

daughter, now Mrs. Cornelia W. McLaury.

GEORGE STEEL was born in Forfarshire, Scotland, in 1797, one of a family of twelve sons, and removed to Canada about 1828, engaging as a contractor on the Lachine Canal. In 1837 he came to Chicago, having entered into a contract for constructing a portion of the Illinois & Michigan Canal. He built the works at Utica, known as the Clark Cement Works. After the stoppage of work on the canal, Mr. Steel came to Chicago and began business as produce and general commission merchant, and established a pork-packing trade on South Water Street, between what is now Fifth Avenue and Franklin Street, on the site of the Alston Manufacturing Company. At that time fifty hogs was a large day's packing business. His office and warehouses were at the foot of LaSalle Street on South Water. In 1856-57 a building was erected on this site and a

room finished in the third story for the use of the Board of Trade, that being the first room constructed expressly for the Board. The room was fifty by eighty feet in size, but was soon found to be too small for the purpose intended, and the Board removed to Newhouse's building, just west of the Steel building. Mr Stee built the first steam elevator in Chicago to receive grain from canal and railroad. The elevator had a capacity of about one hundred thousand bushels. It was on the corner of North Franklin and River streets. It was burned about the year 1854. Mr. Steel was married in Montreal, about 1830, to Anna Stein Morrison, and was the father of nine children, seven of whom are still living—Jane, James, Marjorey, Mary, George, Susan, and William. In 1852-53 Mr. Steel was president of the Chicago Board of Trade. His death occurred in Chicago, in March, 1865. During his life he was a very popular man, and is remembered by his few surviving associates as one of the typical business representatives of the early period in Chicago.

THOMAS HALE, president of the Board in 1853, was a forwarding and commission merchant. He owned large warehouses both on North and South Water streets, and was one of the leading men of the city. Mr. Hale was one of those who signed the call in 1848 for the formation of the Board of Trade, but with the exception of this one office does not appear as a public functionary. S. T. Hale and Martin C. Hale are his

sons. Mr. Hale died some years ago,

George Augusten Gires, son of Dr. Norrin E. Gibbs, a pioneer of Rochester, N. V., was born in Rome, of that State, September 13, 1811. His mother, Sophia Gibbs, was a descendant of General Patterson, of Revolutionary fame. The subject of this sketch was given an academic education at Rochester, but at the age of ninetcen, quitted school to engage in business for himself. In 1840 he came to Chicago as the agent for a forwarding line in Buffalo. He remained in that business for some time, but finally formed a connection with the firm of B. W. Raymond & Co., which later became known as George A. Gibbs & Co. About this time, in company with Edward W. Griffin, he built what was afterward known as the old Galena Elevator, and which was the first of its kind built in Chicago. In 1854-55 he was president of the Chicago Board of Trade and was for years a prominent member of that body. Mr. Gibbs was three times married; first in 1831 to Miss Bertha Strong, daughter of Judge Strong, of Rochester. By this marriage there were four children, two of whom died in infancy, and two, William S. and James S. Gibbs, are now both well-known residents of Chicago, the latter being the present cashier of the Illinois Trust & Savings Bank. His second marriage was to Miss Mindwell Woodbridge, daughter of Dr. John Woodbridge, of Hadley, Mass., during this marriage one child was born but which also died in infancy He was last married to Miss Anna Milford, daughter of Major Milford, an old resident of Chicago. In 1865, December 8th, Mr. Gibbs died, leaving no issue by his last wife, who survived him until in July, 1881, when she too deceased.

HIRAM WHEELER, member of the firm, Munger, Wheeler & Co., has been in the grain and warehouse business for forty-five years. He came to Chicago in 1849, having previously been engaged in the lake trade at 8t. Joseph and Niles, Mich. Two sons, Charles W and G. Henry Wheeler, are now members of the firm. Hiram Wheeler was elected president of the Board of

Trade in 1855.

# SCIENTIFIC DESCRIPTION OF LOCALITY.

### GEOGRAPHICAL.

Chicago is situated at the embouchure of the Chicago River, near the southwestern corner of Lake Michigan. The geodesic position of various points in the city has been determined as follows:

Steeple of Roman Catholic Church of the Holy Name on Wolcott Street, between Huron and Superior streets, 41° 53' 48" north latitude; 87° 37' 47.73" longi-

Dome of Chicago city hall, or court-house, 41° 53′ 6.2° north latitude; 87° 36′ 1.2″ longitude.
Center of the base of iron light-house, 41° 53′ 24.9″

north latitude; 87° 36′ 59" longitude.

Tall chimney of the Illinois Central Railroad Company's machine shops on the lake shore, 41° 51′ 50.5″ north latitude; 87° 37' 21.27" longitude.

These observations were made under the auspices of the United States Topographical Engineers, anterior

to 1870.

The observations made by the United States Signal Service have determined the following geometrical

Station on Washington Street, one square from city hall, ante-fire, in 1871 latitude, 41° 52'; longitude, 87 35

Station in Major Block, southeast corner of Madison and LaSalle, determined by Captain Powell, in 1881; -

latitude, 41° 53′ 4″; longitude, 87° 37′ 45″.

The position of old Fort Dearborn is of record in the archives of the War Department as 41° 52' latitude;

87° 35' longitude.

The center of the telescope in the Dearborn Observatory, situated within the Douglas University buildings on Cottage Grove Avenue, is 41° 50′ 1″ latitude; 87° 36' 41.7' longitude, or 5 hours 50 minutes 26.78 seconds west from Greenwich; or 10° 33′ 40.4″ longitude; or 42 minutes 14.69 seconds west from Washington. This observation was taken by Prof. T. H. Safford, and is authenticated by Prof. Elias Colbert.

The Ephemeris, or American Nautical Almanac, gives the location of Chicago, as latitude, 41° 50' 1"; longitude, 5 hours 50 minutes 26.78 seconds, or 87°

36' 26".

The latitude is, of course, north; and the longitude west from Greenwich.

### METEOROLOGICAL.

The height of the barometer above mean tide is 661.17 feet.

The mean annual rainfall for eleven years ending December 31, 1882, is 33.92 inches, and excessive rainfalls during this period have been on September 9, 1875, 3.52 inches; on the night of July 25, 1878, 4.14 inches; on July 16, 1879, 3.25 inches, and on November 11, 1881, 3.18 inches.

The maximum temperature, since the establishment of the station of the United States Signal Service on November 1, 1870, and prior to July 24, 1883, was

+99°, on July 29, 1874; the minimum temperature, during the same period, was 23° on February 24, 1872. The mean temperature for ten years from 1872 was 49° 4'.

Phenomenal meteorological occurrences have been: the continuance of navigation during the entire year of 1882, and the opening of navigation on May 1, 1883; a storm on August 5, 1875, wherein the wind attained a velocity of forty-five miles an hour; a storm on June 25, 1877, when the wind registered on the anemometer fifty miles an hour, and on May 6, 1876, when the city was visited by a tornado which accomplished damage to the amount of about \$250,000, during the few minutes of its passage. But Chicago has been singularly free from the devastating cyclones that have cut swathes of ruin in all the conterminous country, and the reasonable solution of this fact appears to be that the light, humid atmosphere of the lake absorbs the approaching cyclone and disseminates it. The force of a cyclone, as the force of dynamite, requires repression and compression to educe it.

No more favorable opportunity will be presented, in the course of this history to allude to the duties performed by the observer at the signal station, in carrying out the rules imposed by the United States Signal He has to record, encipher and transmit to the Chief Signal Officer observations of the barometer, thermometer, hygrometer, anemometer and anemoscope; the kind, amount and direction of clouds; the time of the beginning, ending and amount of precipitation during storms; the depth and temperature of rivers and lakes; carefully note and record all atmospheric phenomena; prepare weather reports for the information of the public; attend to the hoisting and lowering of cautionary signals, and generally have a hundred eyes, like Argus, and a hundred arms, like Briareus, to see and annotate such matters meteorological, as will foretell coming storms and record the passage of those that assume entity. This subject is adverted to that the public may have some little conception of the sleepless watchfulness and care that obtains at the multifarious stations of the United States Signal Service all over the continent; and of the unceasing vigilance, that is the prerequisite to liberty for mariners to set sail without forebodings of impending shipwreck.\*

No reference has been made, in this brief allusion to meteorological phases of Chicago's existence, to any observations that may have been made prior to the establishment of the United States Signal Station; there were observations, made cursorily, but no meteorological record is of value unless it is uninterrupted; casual observations are liable to omit the very phenomena, or occurrence, that is of prime importance; and another reason for ignoring sporadic data is, that such matters are treated in the course of the history or are noted in

the chronological table.

Sufficient elaboration, however, has been given to the thermal status of Chicago's climate, to exhibit that the newspaper claim of its eligibility as a summer resort, is not without foundation in the truth-telling figures,

<sup>\*</sup> To Sergeant William Norrington, the observer at the signal station in Chicago, the collaborator is under obligations for valuable information.

registered upon the various thermometers during the summer months.

## TOPOGRAPHICAL.

The authentic topography of Chicago is limited in consequence of the first survey not having been made until 1821, and then only of the shore-line; in fact, the surveys have nearly all been directed to this particular portion of the city, the interest of the general and municipal governments being concentrated upon the harbor, the river and the pier. When real estate speculation was rife in the city, then, of course, additions and subdivisions were made con amore, but these surveys were sectional, not general, and the results of such surveying are not included in this article; which contemplates merely the configuration of the shore-line and the accretions and erosions that have been occasioned by the

and from Chicago Avenue to the north bank of the Chicago River, of about ninety-eight acres.

The surface configuration of the ground is thus accurately described by John M. Van Osdel:

"From the fort, at Rush-street bridge, south on Michigan Avenue, the surface of the ground was, as it is now, about nine or ten feet above the surface of the lake. The surface drainage was from Michigan Avenue west to the river, and from State Street west was nearly a level plain, elevated some two or three feet above the river. The topography of the North Division was similar, the surface declining from Rush Street toward the west. The surface water cut large guillies in the soil, known as sloughs; three of these sloughs opened into the main river. One at State Street was about sixty feet wide at the mouth and extended in a southwesterly direction to the site of the present Tremont House. Another had its outlet between Clark and LaSalle streets, and extended inland across Lake Street. The third and most formidable one was on the North Side, near Franklin Street, being eighty feet wide at the river and extending north through the Kingsbury and Newberry tracts to Chicago Avenue."\*

constant current that sets toward the mouth of the harbor from the straits of Mackinaw. The same forces that caused the bar across the mouth of the river in times of yore, have made hundreds of acres of land upon the north side of the pier, and the detritus and deposit that was formerly a formidable obstacle to navigation has become dry land, and a valuable accessory to Chicago's greatness.

From 1821 until 1869 the lake eroded the shore south of the pier to a width of three hundred and twenty feet; but the piling driven along the lake front retarded this incursion, and then caused a deposit until the land lost has been more than recovered. That the soil along the lake, south of Thirty-ninth Street and as far west as Grand Boulevard, is "made land," is easily perceivable from its arenaceous character and the conchological remains with which it is replete. The accompanying plat\* clearly shows the accretions alluded to, and which demonstrates that at a line near the north bank of the river the various accessions, in lineal feet, have been as follows: From 1821 to 1833, 420 feet; to 1838, 780 feet; to 1843, 1,036 feet; to 1869, 1,758 feet; to 1864, 1,650 feet; to 1869, 1,758 feet; to 1876, 1,900 feet, and to 1880, 1,860 feet; this augmentation making an area, from the survey line of 1821 eastward,

\* Taken from tracings furnished by the kindness of the Chief of Engineers, United States Army, and on file in the office of the Chief Engineer Officer, Military Division of the Missouri.

### GEOLOGICAL.

Chicago lies on an apparently level plain which surrounds the whole of the head of Lake Michigan; the plain having a gradual, average ascent of from five to fifteen feet in a mile in its recession from the lake. The smooth surface of this vast prairie was leveled by the former waves of the lake, which left the oldest beach line at fifty-two feet above its present level. Upon this level the surface deposit is either black muck, or, in For several eons the lake occuplaces, lake sand. pied three different levels, the highest of which-mentioned above-was not as high as around Lake Erie, and this level was that which the lake occupied at the close of the drift period. Then the water fell to about its present level and remained there for ages, while a dense forest in some places and extensive marshes in others, covered the surface where Chicago now stands and over a region to twenty miles north of the city. This was the Quaternary period, and the mastodon roamed† where the churches and schools of Chicago now stand. At the close of this epoch, the lake rose thirty feet, and there remained for ages, throwing up a great beach line, and covering the bones of the masto-

<sup>\*</sup> These sloughs are located upon the plat of Chicago in 1830, in the chapter upon Early Chicago.

upon Early Chicago.

† The skeleton of a mastodon was found thirteen feet under ground in the northwestern part of the city; all of the skeleton, however, was not exhumed.

dons and the prostrate trunks of the forest with fresh water deposits.\* The lake then fell to its present level, throwing up a series of beach lines as it receded. All the fresh water deposits lie on a slope of boulder-drift clay, except where protuberances of rock come above the surface; one of these, at Stony Island, is remarkable for a steep dip of the strata in every direction from its center,-anticlinal axis. This clay varies from zero to at least seventy feet in thickness, and is a hard, stony clay, containing ice-scratched boulders of rock transported from hyperborean regions, and lies everywhere upon a floor of Niagara limestone completely covered with glacial scratches, running approximately in a southwesterly direction. This clay has been thoroughly studied, because during the excavation of about ten miles of tunnels for the Chicago water works, etc., the working of them was watched by the members of the Academy of Sciences; it is so compact that even when the tunnels were driven two miles under the lake at a depth of sixty feet, there was scarcely any infiltration. Like the boulder clay of the West everywhere, its stratification is very obscure, except at a few certain points, and contains no synchronous fossils, except fragments of wood. The clay is also replete with pockets full of stratified gravel, having the general shape of boulders and surrounded by compact clay; the strata of the gravel was sometimes vertical. These masses were probably deposited in a frozen condition; the interstices of the gravel are filled in the upper part of the pocket with combustible carbureted hydrogen gas; the lower interstices filled with water, that, on analysis, yielded this singular result: that water taken from gravel pockets underneath the bed of the lake, contained about twice as much common salt as the artesian well water from the rock beneath the pockets, and about ten times as much salt as the water of the lake above; so that the boulder drift beneath the lake appeared, relatively, a salt deposit sandwiched between the fresher waters of the lake above and the rocks below; a fact which is considered of importance by those who believe in the marine origin of the boulder drift. In the boring of artesian wells it is a matter of much regret that careful records have not been kept that would elucidate the deeper geology; at the Union Stock Yards, however, a well was sunk to the depth of eleven hundred and five feet, and in this instance a record was kept by Johnston Ross, who superintended the boring. This itinerary and the known superficial data give the following section of all deposits down as far as known:

Surface soil From one Lake deposits : to seventy Quaternary forest and soil bed : feet.+ Boulder drift :

### NIAGARA GROUP,

	n-gray limestone	16 feet.
	gray limestone, slightly varying in	
	ide of color at different depths	
3. Limes	tone-nearly white	20 feet
4. Limes	tone-buff or drah	So feet=254 feet
	CINCINNATI GROUP,	

CINCINNATI GROUP,	
5. Shale—soft and fine	104 feet
or inflicatorie—light-gray	20 Rect
7. Shale—coarser and arenaceous	126 feet=250 feet.

### TRENTON GROUP.

It is a matter of scientific credence that this rise corresponded to the in-undation of the Loess found on the Mississippi River, and in most of the South-ern States, where as in Chicago, it covers a forest bed containing remains of the mastedom.

† The drift and surface deposits were forty-six feet where the well was bored at the Stock Yards

### ST. PETER'S.

10. Whitish-brown sandstone..... 155 feet=155 feet.

LOWER MAGNESIAN LIMESTONE.

11. Light-colored limestone-very hard...... 60 feet 12. Gray limestone... 10 feet= 70 feet.

The first forty feet of the Niagara limestone is extensively permeated with bitumen or petroleum, of which several ounces can often be taken out in a mass from cavities in the rock; an aggregation of protracted percolation. Green stains occur frequently in the limestone; analysis thereof determined them to be salts of chromium, but not in paying quantities. Of the bituminous rock several edifices in Chicago have been built; such buildings are readily recognized by their peculiarly antiquated, weatherbeaten appearance. Outcroppings of the Niagara limestone occur at Stony Island, South Chicago, at Stearns' lime kilns (Bridgeport), corner of Twenty-seventh and Halsted streets; at Phinney's lime kilns, corner of Nineteenth and Lincoln streets; at Rice & Son's and Keyes & Thatcher's quarries and kilns, corner of Grand Avenue and West Ohio Street; also near Hawthorn Station in Cicero Township. By these outcroppings, and by the fact that the Cincinnati shale comes to the surface in a northwesterly direction in central Wisconsin, the strike is manifested to be northwest and the dip consequently\* northeast, and the clinometer demonstrates its angle to be nine degrees.

### PALEONTOLOGICAL.

In presenting a list of the fossils found in Chicago and its immediate vicinity-the most primitive of the old settlers—a brief resumé of the paleontological researches that have been made here is requisite, as such explorations have considerable bearing on the identity of many species enumerated, and resulted in giving to the scientific world many new and interesting forms. Of the one hundred and twenty-one species given, Chicago has furnished forty-six type specimens, exclusive of instances where these quarries have provided material used in describing forms found in other localities. In 1860, Professor McChesney described and illustrated, in the Proceedings of the Chicago Academy of Sciences, Bucania chicagoensis, Trematospira mathewsoni, and other species. In 1865, Professors Winchell and Marcy read before the Boston Society of Natural History, a paper entitled: "Enumeration of Fossils collected in the Niagara Limestone at Chicago, Ill., with descriptions of several new species;" this paper was published and illustrated, and applied only to species found at Bridgeport, and therein thirty-nine established species were mentioned as having been identified and a similar number were described as new species. About the same time Professor James Hall, of Albany, N. Y., published a pamphlet entitled: "Account of some new, or little known, species of Fossils from the Niagara Group;" in which some of the species de-scribed by Professors Winchell and Marcy were figured and described under different nomenclature. This has occasioned confusion and synonyms, which, however, time will eradicate. In 1868, Professors Meek and Worthen described in the third volume of Illinois Survey, two new species, and illustrated a few others. During

"The dip of the rock in the immediate vicinity of Chicago has been given by the State Geologist as east and southeast. At Phinney's quarry—the only one opened at the time of the compilation of this report—when the observation was taken, the westerly presentation of the undulating stratum gives that appearance, but the opening of the quarry on other sides rectified the andulating period of the compilation of the sides of the compilation of this topic Dr. Edmund Andrews furnished valuable data upon surface geology, and Albert D. Hager furnished important facts on deeper geology, without which this chapter would be barren and uninteresting.

1881-82-83, S. A. Miller, of Cincinnati, the author and eminent paleontologist, in the Cincinnati Journal of Natural History, described and illustrated some thirteen species from Bridgeport and from a quarry a few miles west of Chicago, and also redescribed and illustrated a few of the species of Professors Winchell and Marcy that had been in dispute. Among those described by S. A. Miller, is the enigmatical fossil Myelodactylus bridgeportensis, for which a new family—the Myelodactylidæ—has been proposed. The fossils that are found in Chicago and its vicinity are generally casts of the interior, and impressions on the rock of the exterior; the casts are, generally, clear and sharp, but broken, and perfect specimens are extremely rare, necessitating an extensive suit before identification is certain, except in pronounced forms; which fact has often been productive of confused identification among the prominent authors. The condition of the sea, at the time of the depositing of the rock, was very favorable to the crinoidal fauna, demonstrated by the large and robust forms and number of species of that representative of the echinodermata.\*

The following list of the Batrachia and Reptilia that have been found in this region has been prepared by Dr. N. S. Davis, Jr., of Chicago.

### BATRACHIA.

TRACHIVSTOMATA. SIRENIDÆ. Siren lacertina; Great

PROTEIDA. PROTEIDÆ. Necturus lateralis; Mud-puppy

or Water-dog

CADUCIBRANCHIATA. AMBLYSTOMIDÆ, Amblystoma opacum; Opaque Salamander: A. punctatum; Large Spotted Salamander: A. tigrinum: Tiger Salamander: A. jeffersonianum, subspecies, laterale; Jefferson's Salamander. PLETHODONTIDÆ. Hemidactylium scutatum; Four-toed Salamander: Plethoson cinereus; Red-backed Salamanders of both sub-species, cinereus and erythronolus: Plethoden glutinosus; Viscid Salamander: Spelerpes bilineatus; Two-striped Salamander: S. longicaudus, Cave, or longtailed, Salamander: S. Ruber, sub-species, ruber; Red Triton. DESMOGNATHIDE. Desmognathus fusca, sub-species, fusca; Dusky Salamander: D. nigra: Black Salamander, PLEURODELID.E. Diemyctylus miniatus, sub-species, miniatus; Red Evet : D. miniatus, sub-species, viridescens; Spotted Evet.

ANOURA, BUFONIDE. Bufo lettiginosus, sub-species, americanus; Common Toad, HYLIDE, deris gryllus, sub-species, crepitans, Northern Cricket Frog: Chorophilus triseriatus, sub-species, tierriatus; Tree Frog: Hyla pickering; Pickering's Tree Toad: H. versicolo; Common Tree Toad, RANID-E. Rana holicins, Compon Deven Parinette Toad. halcina: Green or Spring Frog. R. palustiis; Pickerel Frog. R. clamitaur; Green or Spring Frog. R. cateshiana; Bull Frog. R. temporaria, sub-species, sitvatica: R. arcolata, sub-species, circulesa;

### REPTILIA.

OPHIDIA. CROTALIDE. Crotalus horridus; Banded, or Northern, Rattle Snake: Caudisona lergemina; Massassauga, or Prairie Rattle Snake: Ancistrodon contortrix; Copper-head or COLUBRIDA: carphophiops amanus: Ground Snake: Optiloius doliatus, variety, Diangulus, Milk Snake or Spotted Adder. O. getulus, variety, sayi; King Snake: Diadophis punctutu. sub-species, punctutus; King-necked snake: Cyclophis sernalis; Green or Grass snake: Coluber vudpinus; Fox Snake: C. obsoletus, sub-species, absoletus; Pilot Snake: Pityophis sayi, sub-species, sayi; Western Pine Snake: Baseanion constrictor, subspecies, constrictor; Black Snake; Blue Racer: Entania saurita; Species, control, Black, Sinke, Black Released, Salver, Riband Snake; Swift Garter Snake: E. jaireji; Fairv's Garter Snake: E. proxima; Say's Garter Snake: E. vagrans, subspecies, vagrans; Spotted Riband Snake: E. sirtalis, sub-species, dorsalis; Common Striped Snake: E. Sirtalis, sub-species, sistalis; Common Garter Snake: E. sistalis, subspecies, obscura: Storeria occipitomaculata; Red-bellied Snake. S. dekayi; De Kay's Brown Snake: Tropidoclonium kirtlandi: Cora Kennicott's Snake. Tropidonotus grahami; Graham's Snake: T. leberis: Leather Snake: T. sipidon, sub-species, sipedon;

The mark \* indicates species the type of which was found at the Chicago quarries, and the mark † indicates species designated as found in Chicago at the time of the description.

Water Snake: T. sipedon, sub-species, woodhousei; Woodhouse's Water Snake: T. spedon, sub-species, crythrogaster; Red-bellied Water Snake: T. shombifer: Heterodon platyrhinus; Spreading Adder: H. simus, sub-species, simus; Hog-nosed Snake.

LACERTILIA. SCINCID.E. Eumeces fasciatus; Blue Tailed Lizard. TEID.E. Cnemidophorus sexlineatus; Six-lined Lizard. ANGUID.E. Opheosaurus veutralis; Glass Snake. 1GUA Secloporus undulatus, sub-species, undu'atus; Swift Lizard. IGUANIDÆ.

TESTUDINATA. TRIONYCHIDÆ. Amyda mutica; Leathery Turtle . Aspidonectes spinifer; Common Soft Shelled Turtle. CHELYDRID.E. Chelydra serpentina; Common Snapping Turtle. CINOSTERNID.E. Aromochelys odoratus; Musk Turtle or Stink Pot; A. carinatus. EMYDIDÆ. Malacoclemnys geographicus; Map Turtle:
M. pseudo-geographicus; Le Sueur's Map Turtle: Chrysenys pieta;
Painted Turtle: Emys meleagris; Blanding's Turtle: Cistudo clausa; Common Box Turtle.

### ZOOLOGICAL.

The following list of animals, whose habitat is, or was, Chicago, is furnished by Jacob W. Velie, Secretary and Curator of the Chicago Academy of Science:

BLARINA: Gray. Blarina brev cauda, Gray—Short-tailed Shrew. SCALOPS: Cuvier. Scalops argentatus, Aud. and Bach—Silvery Mole.

CONDYLURA: Illiger. Condylura cristata, Illiger-Star-nosed Mole.

Lynx: Rafinisque. Lynx rufus, Rafinisque—Wild Cat. Canis: Linnæus. Canis occidentalis, var. grisco-albus—White

and Gray Wolf.

VULPES: Baird. Vulpes fulvas, var. fulvas-Red Fox: V. virgin-

Voles, Balla, Pulpes Jacob, Val. Jacob—Red Fox. P. Forginianus, Richardson—Gray Fox.
PUTORIUS: Cuvier. Putorius novebnacensis, De Kay—White
Wease! P. vison, Richardson—Brown Mink: P. nigrisceus,
Aud, and Bach—Black Mink.

Aud. and Bach—Black Mink.

LUTRA: Linn. Lutra conadensis, Sabine—American Otter.

MEPHITIS: Cuvier. Mephitis mephitica—Common Skunk.

PROCYON: Storrer. Procyou lotor, Storrer—Common Raccoon.

URSUS: Linn. Ursus americanus, Pallas—Black Bear.

URSUS: Linn. Orsus americanus, tailas—back beat.
DIDELIPIYS: Linn. Didelphys virginiana, Shaw—Opossum.
SCIURUS: Linn. Sciurus ludovicianus, Curtis—Western Fox

Squirrel: S. carolinasis, Gmelin—Gray Squirrel,
PTEROMYS: Cuvier. Pteromys volucella Cuv. (?)—Flying Squirrel,
SPERMOPHILUS: Cuvier. Spermophilus franklinii, Richardson—
Gray Gopher: S. tridecem lineatus, And. and Bach—Striped Gopher.

Arctomys: Shreber. Arctomys monax, Gmelin—Woodchuck,

Ground Hog.
TOR: Linn. Castor canadensis, Kuhl—American Beaver.

Delloc—Brown Rat (intro CASTOR: Liun. Castor canadensis, Kuhl—American Beaver.

MUS: Linn. Mus decumanus, Pallas—Brown Rat (introduced
1846): M muscalus, Linn—Common Mouse (introduced).

11ESPEROMYS: Waterhouse. Hesperomys michiganensis, Wagner-Prairie Mouse.

ARVICOLA: Lacepede. Arvicola austera, Leconte-Prairie Meadow Mouse.

FIBER: Cuvier. Fiber zibethicus, Cuvier—Musk Rat. LEPUS: Linn. Lepus sylvaticus, Bachmann—Gray Rabbit,

CERVUS: Linn, Cervus canadensis, Erxl-American Elk: C. virginianus, Boddaert-Virginia Deer.

Linn. Bos ame icanus, Gmelin-American Buffalo. Of this last species of mammalia a curious error obtained with the early explorers; an instance of which appears in the "Recueil de voyages de M. Thevenot, Paris, 1681," wherein are given the voyages of Pére Marquette. Upon a chart entitled: "Carte de la decouverte faite l'an 1673 dans l'Amerique Septentrionale,"\* illustrative of the regions over which Marquette passed, is one district noted as inhabited by "Nations qui ont des chevaux et des chameaux!" (Nations who have horses and camels). The peculiar appearance of the buffalo undoubtedly gave origin to this error.

### ORNITHOLOGICAL.

The following table of families of birds in Chicago and its vicinity, is given by Jacob W. Velie, of the Chicago Academy of Science:

Turdidæ	Thrushes	9	species
	Bluebirds		
Sylviida:	Warblers	3	species
Paridæ	Titmice and Chickadees,	ī	species

<sup>\*</sup> Vide Maps in Early History of Chicago.

### ENTOMOLOGICAL.

Of the entomology of this region nothing can be intelligently said within the limits of this chapter; as, to give a catalogue of the various Coleoptera, Lepidoptera, Diptera, Heminoptera, Orthoptera, etc., would occupy to ogreat a proportion of this work; and the possible benefits to the agricultural inhabitant of Chicago by the publication of such a catalogue would not repay the labor bestowed upon the compilation. There is no question as to the value of the science to both the savan and the agriculturist, but unfortunately, there is no classification made of the insects indigenous to this region, and to eliminate them from a general catalogue would require months of labor. In the comprehensive collection of Mr. Andrew Bolter are one hundred and fifty specimens not identified, and this gentleman states that new microscopic species are continually being discovered; hence a catalogue from this-the best collection in the State—would be necessarily imperfect; and the collection itself being extant, entomologists can consult that, and have the advantage of Mr. Bolter's exhaustive research and comprehensive information to aid their entomological investigations.

## ICHTHYOLOGICAL.

The ichthyological specimens\* that are found in the waters adjacent to Chicago, comprise, three specimens of the Darters; four specimens of the Perches; one of the Bass; eight of the Sun Fishes; one each of the Pirate Perches and the Maigres; four of the Sculpins; one of the Cod Fishes; two of the Sticklebacks; one each of the Silversides and Toothed Minnows; two of the Pikes; one of the Trout Perches; seven of the Salmon; one each of the Gizzard Shad and Herring; twelve of the Carps; seven of the Suckers; three of the Cat Fishes, and one each of the Eel and the Sturgeon family.

### CONCHOLOGICAL.

Of the conchological specimens found in Lake Michigan, the Calumet and Chicago rivers and the Calumet, Hyde and Wolf lakes, the following classification has been made by W. W. Calkins:

LIMN.EA reflexa, appressa, jugularis, palustris, caperatwa, umbrosus; PHYSA givina and heterostropha; PLANORBIX.E campanulatus, trivolvis, parvus, bicarinatus; SEGMENTINA amigera; VALOATA tricarinala, sincera and contectoides; MELANTHO subsolidus, coare tata, and the smaller species Byth. obtusa; SOMATOGYRUS depressus; AMNCOLA cincinnatiensis; TRY. subulare; GON. livescens; SPHLERIA simile, partumeium, transversum; PISIDIA abditum and compressum; UNIONIDEA cornutus, gracilis, gibbosus, lutedous, occidens, rectus, pustulosus, rubiginosus, elegans, undulatus, verrucosus, ellipsis, luberculatus; MAGARITANA complanata; ANODONTA footiana imbecillis and plana.

## FLORAL.

In 1872, an exhaustive catalogue of the flora of Chicago, and the country within radii of about forty miles, was compiled by H. H. Babcock, and published in The Lens, a journal issued by the State Microscopical Society of Illinois. This classification was thorough and complete, and 1s-like the entomology-too large for insertion in this work. Dr. Lester Curtis, president of the Microscopical Society, courteously furnished this catalogue, and naturalists can obtain information of him relative thereto. In connection with this subject, it is germane to allude to the peat-beds that have been found in several localities; showing not alone the cryptogamic sphagni, but also demonstrating that the climate of Chicago in by-gone years was humid and cloudy; as sunlight and dry atmosphere are fatal to sphagnum, of which peat is the consequence. Microscopic investigation of this peat will reveal many of the floral antiquities of this

\*A complete catalogue of the fishes of Illinois, will be found in Bulletin No. 2, Natural History of Illinois, by Professor David S. Jordan; issued under the auspices of Professor S. A. Forbes, Director Illinois State Laboratory of Natural History.

# SANITARY HISTORY.

TOWN AND CITY REGULATIONS.-When, in the summer of 1832, General Scott brought his troops from the East to engage in the Black Hawk War, he introduced the first epidemic to the people of Chicago; and a full account of this cholera season will be found in the matter devoted to the Indian scare. It was not until the next year that the town authorities, in pursuance of their delegated powers, made the first sanitary regulation. On November 7, 1833, the Board of Trustees passed an order imposing a penalty of \$3 upon anybody who should throw refuse into the river. June 6, 1834, on account of the cholera scare, the Town Supervisor or Street Commissioner was ordered to remove many nuisances which then endangered the public health. In August ordinances were passed against throwing anything of an obstructive nature into the sewers. A vigilance committee was also appointed to see that the needed work was done. It consisted of Dr. W. B. Egan, Dr. J. C. Goodhne, A. Steele, Mark Beaubien, J. K. Palmer, South District; G. Kercheval, J. Miller, N. R. Norton, John Davis and Hiram Hugunin, North District; J. Kinzie, C. Taylor and J. Bates, West District. Drs. Clark and Kimberly were authorized, if necessary, to establish a cholera hospital outside the city limits.

In February, 1835, the corporate powers and limits of the town were changed, and among other privileges the Trustees were authorized to form a permanent Board of Health. A revival of the cholera excitement in the summer caused the formation of the board on June 19. It consisted of James Curtiss, B. S. Morris, E. Peck, B. King, A. N. Fullerton, John T. Temple, J. Jackson and H. Hugunin. They held their first meeting June 23. But the board seems to have died with its birth, and only one of its acts is distinctly stamped upon the history of these early days. To carry out their sanitary measures the board proposed to borrow \$2,000, which caused such a panic in the ranks of the strict economists that the board subsided into

hopeless inaction.

In January, 1837, before the incorporation of the city, the establishment of a permanent hospital was urged, but it was not until the public had again suffered with cholera and other epidemics that the project was favorably looked upon. Under the act of incorporation of March, 1837 Section 57, the Common Council were to appoint three commissioners annually to constitute a Board of Health. The Mayor of the city or the presiding officer of the Council was to be president of the board, and the City Clerk its clerk. The charter also provided for the appointment, annually, of a health officer, whose duty it should be to visit persons sick of infectious diseases, and to board vessels suspected of harboring any pestilential or infectious disease. Accordingly, on May 9, 1837, Dr. J. W. Eldredge, A. N. Fullerton and D. Cox were elected members of the board, and Dr. D. Brainard appointed health officer.

From this time on the sanitary affairs of the city were in the hands of its Board of Health, the executive officers of which were either known as the city physician, the health officer, or the marshal. In 1838, when

Dr. E. S. Kimberly was health officer, Chicago had first to battle with an epidemic in its municipal capacity, the "canal cholera" breaking out among the laborers of the Illinois & Michigan Canal. Dr. Charles V. Dyer was elected health officer at the beginning of the year 1839, but resigned his position in September, and was succeeded by Dr. Kimberly, who served until 1841. During this year Dr. John W. Eldredge was elected health officer, and in May an ordinance was passed requiring the attending physician to give a certificate upon the death of any person, thus establishing a basis for the gathering of vital statistics. The first regular mortuary record, however, was not published until 1851. In 1842, Dr. Egan was chosen city physician and Orson Smith health officer and city marshal. Mr. Smith served in that capacity until 1845. During this year Dr. Phillip Maxwell was chosen city physician and Phillip Dean city marshal and health officer. In 1846 Ambrose Burnham succeeded Mr. Dean, while in 1847 a separate choice was made for each office, viz.: J. F. Wait, health officer; Ambrose Burnham, City Marshal, and Dr. Henry S. Huber, physician. Dr. Levi D. Boone became city physician in 1849, and City Marshal Burnham also acted as health officer. A continuation of the roster is as follows: City physicians, Dr. Boone, 1850-51; Dr. A. B. Palmer, 1852; Dr. Brock Mc-Vickar, 1853-54; Dr. Isaac Lynn, 1855; Dr. McVickar, 1856: Dr. Gerhard Paoli, 1857. The health officers were Orson Smith, C. P. Bradley, W. B. H. Gray, W. W. Taylor, George P. Hansen, and Ambrose Burnham.

CHOLERA AND SMALL-POX EPIDEMICS.—After the cholera epidemic of 1832, the next season which came upon the city was in 1838, when the laborers on the Illinois & Michigan Canal were attacked by a disease which balked all medical skill. It was called "canal cholera," and as fast as its victims succumbed their bodies were sent to Chicago and thrown on the roads near Bridgeport, as citizens were afraid to touch them. It was in 1843 that the city or small-pox hospital was constructed, located just above North Avenue, near the lake shore, on the grounds purchased for a cemetery. In March, 1845, the building burned to the ground. The fire originated from some ashes which were carelessly left too near the building. Its burning was particularly unfortunate at this time, as there were several small-pox cases, and patients were then being treated in the pest house. Mayor Garrett had even issued a proclamation for general vaccination. While another hospital was being erected on the same site, the patients were accommodated at the house of a Mr. Shaw, in the northeastern part of the city. The County Hospital was opened in old Tippecanoe Hall, on March 30, 1847. During 1846-47 the population of the city increased rapidly and a great amount of sickness prevailed. Most of the patients without means, were accommodated at the Alms House. The accommodations becoming quite insufficient, it was found necessary to have a large number of sick persons boarded and cared for at private houses in the city. This was necessarily attended with great expense, and, to avoid it, the public authorities suggested the renting of a building on the north side of

the river. Upon second thought, however, the Common Council saw fit to apply for the temporary use of the

garrison buildings.

In 1848, small-pox was epidemic in the regions adjacent to the city, and R. C. Ross, the City Marshal, advertised under date of January 28, that the following physicians would gratuitously vaccinate the poor: Henry S. Huber, L. D. Boone, D. Brainard, C. H. Duck, J. Jay Stuart, and H. K. W. Boardman, J. N. Banks, F. C. Hagerman, Aaron Pitney, Erial McArthur, George Wallingford Wentworth, J. Bassett, and John D. Bowlby; and the following physicians also advertise, under the same date, that they will gratuitously demonstrate the principles of Jenner upon those who are too poor to pay for their inoculation: Doctors C. H. Duck, Max Meyers, H. K. W. Boardman, M. L. Knapp, - Cross, W. B. Mead, and W. R. J. Reynolds. This appears to be the first official and medical co-operation, for precautionary measures, to prevent the introduction or spread of small-pox.

In 1849 the variola was prevalent in the city; and, in February, a public meeting was held whereat resolutions were passed setting forth the necessity of cleansing the city, which resolutions were presented to the Common Council by Dr. B. McVickar, chairman of the committee, and referred to the Board of Health by the Council; and on April 2 the following gentlemen were appointed assistant health officers, to act as co-adjutors to the Board of Health; being in the ratio of one officer to each block in the city: Charles Walker, George W. Meeker, Nathaniel Sherman, Jr., Jeremiah Price, Mark Kimball, A. S. Sherman, Charles McDonell, Jacob Bendler, J. Ambrose Wight, C. R. Starkweather, John Frink, Isaac Speer, Ezra Collins, T. B. Carter, John High, Samuel Bennett, J. O. Taylor, Caleb Shaw, Jared Gage, T. Whitlock, S. J. Sherwood, J. T. Edwards, A. H. Burley, Zebina Eastman, C. N. Holden, William Wheeler, A. F. Bradley, and A. Rossiter, and, in the latter part of April these additional gentlemen were appointed, so as to complete the ratio as designated: Thomas Church, Samuel B. Cobb, S. Sawyer, John Jennings, John B. Turner, John S. Wright, John S. Gray, G. M. Higginson, Elihu Granger, T. Weiler, Hugh Dunlap, A. Moon, Andrew Smith, A. Peck, Luther Marsh, Solomon Wait, and Samuel If these gentlemen were only as efficient and distinguished in the enforcement of sanitary regulations as they have been as citizens of Chicago, there probably was never such a hygienic posse in any city in the

Cholera did not make its appearance seriously until the winter of 1849. Anticipating its dread coming, the muncipal authorities inaugurated a cleaning crusade. Small-pox was already quite prevalent, and there was such a marked increase of cholera in the country that a public meeting was held, February 12, demanding that more stringent measures be taken. Among other things, the Board of Health asked that additional sewers be built. On April 29, the malignant form of cholera was brought by the emigrant boat, "John Drew." Captain John Pendleton contracted the disease from the emigrants, who had arrived from New Orleans, via the Mississippi and Illinois rivers, and Illinois & Michigan Canal. He died a few hours after the arrival of the boat. Others who came also died soon after their arrival. At this time there were no quarantine regulations, and the disease was further introduced and spread by the arrival of emigrants from Europe. In May the Council authorized the Board of Health to construct a temporary hospital for the treatment of indigent persons attacked by the cholera. It was located near the present site of the old County Hospital, near Eighteenth Street and the Chicago River. In September it was ordered closed by the Common Council, and was re-opened after a few days, cholera having appeared again among some newly arrived emigrants. It was closed in October, and finally

burned in May, 1852.

From the time of its introduction, in 1849, cholera gradually spread, and prevailed as an epidemic from July 25 until August 28, during which time one thousand persons were attacked, of whom three hundred and More than any other locality in the fourteen died. city, the disease prevailed on a sandy elevation in the North Division, chiefly inhabited by Norwegians, and many of them recent arrivals. Forty-four out of the three hundred who lived in this region fell victims to the malady. Among the citizens of prominence who were carried off by the scourge this year were Hon. Henry Brown, Rev. W. H. Rice, Henry B. Clark, Dr. J. E. O'Leary, L. M. Boyce, James Knox, M. Kohn, W. N. Bently, Samuel Jackson, Newell Stratton, A. J. Penny, E. Hitchcock, A. Calhoun, A. S. Robinson and George Avers.

Descriptive of these terrible times is the following, written by an old settler who was a participator in the horrors of which he wrote and had a narrow escape

from death himself:

"During the winter of 1848-49 cholera appeared at New Orleans, and began slowly to ascend the Mississippi, and before the frost had left the ground it appeared inevitable that the contagion would reach Chicago, which was, indeed, the case all too soon. The first case that came under my notice was that of Deacon Jackson, of the Tabernacle Baptist Church, who was a personal friend. One Sunday morning in May, or perhaps in June, on my way to church, I was crossing the river by ferry at Rush Street (all the bridges had been carried away that spring by a flood), when I overheard a fellowpassenger telling another one that Captain Jackson had died of cholera. I inquired what Captain Jackson was referred to, when I learned it was my friend, the Deacon. As the ferry landing was within a few rods of the Jackson dwelling, being one of the houses within the fort, I hastened thither. I found William Jones alone with the corpse, the family being in an upper room, from whence I could hear their united wailings. The face was a shade darker than usual, and around the mouth were the dark purple spots, which I soon learned to be the unmistakable deathmark of that dreaded and terrible disease—the Asiatic cholera. Mr. Jackson had been attacked the previous afternoon, while engaged in his usual employment of driving piles and building docks along the river; he hastened home and died within a few hours.

"The disease gradually, or, I may say rapidly spread, until on the 1st day of August the number of deaths reached thirty, which was the highest number for any one day. I think the death of Mr. Bentley, the father of Cyrus Bentley, soon followed that of Deacon Jackson. L. M. Boyce, a prominent druggist, died in his house alone, his family having just left for the country. Deacon Knox, also of the Tabernacle Baptist Church, died very suddenly. The Rev. W. H. Rice, pastor of the same Church, was attacked while returning from the bedside of Mr. Knox. It was Sunday morning, and he was intending to preach, and was hastening for that purpose. I happened to be at the door of his boardingplace when he arrived, and assisted him into the house. The house was that of Mr. Pillsbury, on Dearborn Street, a few doors south of where the Tribune building

now stands. Dr. D. S. Smith was called and attended him. Mr. Rice steadily failed until about 2 o'clock, when we gave him up. He then gave directions about his affairs and made his will. Among other remedies, by Smith's direction, we tried electricity, first insulating the patient by standing the bedstead on glass. Whether from this or other treatment, Mr. Rice lingered along and I staid with him till midnight, when I retired to another room to sleep, fully expecting to find him dead in the morning. But to my surprise I found him still living, and apparently improving. He continued thus through the day, when he again began to fail, and soon died. When Mr. Rice was attacked Sunday morning, the weather was very warm, and so continued till Monday afternoon, when there came one of our Lake Michigan chilling breezes. It was to this that I attributed Mr. Rice's relapse, for I had noticed that deaths were more numerous after these sudden changes from hot foco ot

"There was at this time an Englishman named Morrell, a blacksmith, who was just from England and but recently married, who was working for me. One Saturday night he came to me and said he wanted all the money that was due him, and that he would not be at work till the following Tuesday, as he had bought a lot from Mr. Elston, and he wanted on Monday to get lumber on the ground, and set carpenters at work on a little house which he had determined to build. Late Saturday night I saw him on his way home, appearing unusually cheerful. On Sunday morning following I went over into town on the South Side, and did not return till after the evening Church service, when I was met with the information, that Morrell was dead and buried. I was thunderstruck. Mrs. Morrell came to me in the morning to say that Mr. Elston had returned the money which had been paid on the lot, and that she was going back to her old home in England; and before night of that Monday she was on her sad and lonely journey thither.

"Another Englishman named Conn, a boiler-maker, was also at work, and with him was a boy of fourteen, who was at work also, as Conn was very desirous of keeping the boy with him. The boy was attacked with cholera. We ministered to him, and chafed his limbs to promote circulation for two or three hours. We rubbed till the skin was broken. When we found that all our efforts were in vain, Conn quietly arose from working over him, and began silently to pace the floor, occasionally stopping to look down on the dying boy. Soon, however, he began to curse and swear, and to half-soliloquize and half-relate, as he continued his walk. Such oaths and imprecations I have seldom heard. 'Here,' said he, 'I have brought the boy from his home, and I promised his mother that I would return him safely to her. And now, in this far-away country, the boy is dying. What am I going to say to his mother?' Rough as Conn was in speech and manner, he was kindly, and faithful, and true; that is as he understood his obligations.

"That summer I boarded with my partner in business, Mr. T. C. James. One day when I went in to dinner, Mrs. James asked me to go into another room and look at one of her daughters, a girl of fourteen, who had just begun to complain and had lain down. I saw at a glance that it was cholera. She died in about seven hours. Another daughter was taken while returning from the funeral the following day, and died before

"Late in the season I resolved to go into the country to visit friends and recuperate. Travel then to Wisconsin, where I was going, was by large steamers by the lake. On landing at Kenosha, I met a great-uncle, who invited me to his house. A few minutes after our arrival there, word came that a great-aunt, living but a few rods away, had been suddenly taken sick. We went there and found it to be cholera. She died during the night. I went over in the morning again, and found the undertaker there, but not another man about to help him place the corpse in the coffin. I took hold with him, and, as she was a heavy woman, it was with a great deal of difficulty that we accomplished the task. I then went immediately into the country, a few miles away, to my father's, and before night we heard that the uncle, with whom I had stayed the night before, was also dead. Such were cholera scenes throughout the country. On my return to Chicago the first acquaintance 1 met was Deacon Elisha Clark, of the First Presbyterian Church. He looked cheerful and animated, and the first word he said was: 'The cholera has left us,' This shows how depressing was its presence, and what relief was its departure.

A few physicians and 'as a rule in such calamities' some Catholic priests and Sisters of Charity remained to care for those who otherwise would have been thrown upon the streets or be placed under the guardianship of the municipal authorities. During the month the deaths numbered nine hundred and thirty-one. Of the seven hundred and thirty-one fatal cases reported for August, two hundred and sixty-four were on account of cholera. Early in November, through the persistent warfare of the municipal authorities and physicians and Christian men and women, the epidemic was driven from the city. The disease was almost confined to the emigrant classes. For many years thereafter the city enjoyed compara-

tive immunity from this epidemic.

The cholera scourge forced a strong conviction into the public mind that a permanent city hospital ought to be established. Dr. Brock McVickar, who had been re-elected City Physician for 1854, was ordered to report to the Board of Health what measures should be taken. During the height of the excitement, in July, a quarantine station was established, and in November the City Physician again urged the erection of a permanent hospital and also the establishment of a dispensary for each division of the city. The board offered \$100 for the best plan for a city hospital, and in April, 1855, awarded the premium to Carter & Bauer, who estimated the cost at \$30,000. In February of the next year a tax was levied to raise the necessary funds for its construction, and the architects visited New York to examine the city hospital there and perfect their plans. They returned in April, the Common Council adopted the plans, as improved, and the erection of the building was commenced, south of LaSalle Street, between Cross and Old. The hospital was completed in June, 1857, and two medical boards were established the allopathic and homeopathic) to treat patients. The structure was of brick, sixty-six by one hundred and fifteen feet, three stories in height, and cost, ready for occupancy, \$45,000.

In December, 1850, there were a few cases of smallpox, the disease increasing in the spring of 1851, subsiding during the summer, and developing with increased virulence in December. But two deaths are, however, officially reported as resulting from small-pox in 1851.

On February 15, 1851, chiefly because of the ravages of cholera, the Legislature passed an act incorporating the Chicago City Hydraulic Company, that citizens might obtain a better water supply. Cholera continued to increase throughout the winter and spring of 1852, and in May the pest-house was opened to receive cases

of all contagious diseases. During the year there were six hundred and thirty deaths from cholera alone. The general health of the city was good in 1853. The next year was the great cholera season.

In January, 1852, small-pox broke out again, and, in June, the Small-Pox Hospital was ordered changed in its internal arrangement so as to have small-pox and cholera cases at either end of the building. The deaths

from small-pox are reported as nine.

In April, 1854, a few scattering cases of cholera appeared, but the public prints and the Board of Health denied their existence, under the mistaken idea that to deny the existence of an evil goes far toward killing it. But the temporary hospital was ordered to be built in May. A train which entered the city June 20, brought a party of Norwegians, bound for Wisconsin, among whom the disease was raging. Six were dead on the train, and a seventh died in a few minutes after being taken out. Some twenty persons were taken, in various stages of the disease, from the train to the City Hospital. These were the first recorded cases. Until about the 5th or 6th of July, the disease was generally confined to newly arrived emigrants. Quarantine grounds were immediately established on the main lines of emigrant travel. The ground near the City Hospital was taken for quarantine purposes. The suddenness with which the pestilence came upon the city is shown by the deaths during the first week of July. The total interments from July 1 to July 8, were two hundred and forty-two. During this latter month the mortality among those taken with the epidemic nearly doubled, the deaths occurring being about sixty per day. The death-cart was continually upon the streets. Especially during the 8th and 9th of July were the thoroughfares of the city crowded with hearses. On Sunday the populace became so excited that a grand exodus occurred, many persons going to Milwaukee. Dr. Charles V. Dyer tells the following anecdote with a good deal of zest, relative to some brother practitioners and himself, during the cholera season of 1854: "Deeming it requisite to establish a quarantine, to prevent the introduction of the disease, we organized an amateur Board of Health, and hired a warehouse to be used as a hospital. Hearing that a steamboat was coming into port, with eighteen cases of cholera on board, we went onto the vessel and removed the patients to the improvised hospital. On viewing the sick, nine were decided to be beyond medical assistance, and the remaining moiety were decreed to be favorable subjects for pathological skill; but, unfortunately, the nine upon whom were lavished all the resources of science died, and those who were esteemed to be almost in articulo mortis all got well.'

MORTUARY REPORT.—The first mortuary report was published in June, 1851, from data furnished the City Clerk by the City Sexton. For several years thereafter the record was prepared from reports furnished the City Sexton by the undertakers. Following will be found a table showing the number of deaths by the principal causes, from 1851 to 1857 inclusive, and the

total mortality by years:

Years.	Small-pox.	Fevers.	Con- sumption.	Dysen. tery.	Cholera.	Totals.
1851	2	49	7	22	216	669
1852	9	144	116	53	630	.1,652
1853	19	116	176	54	113	1,205
1854		209	216	242	1,424	3,834
1855		86	162	150	147	1,983
1856	16	135	288	305		1,897
1857	10	267	255	465		2,170
Totals	98	1,006	1,220	1,291	2,430	13,410

HOSPITALS.—The first city hospital established was, as stated, a small-pox hospital, built in 1843, immediately above the present North Avenue, near the lake shore, on ground purchased for a cemetery; this was burned early in 1845, and a second one erected in that

year upon the same site.

The first Insane Asylum was on Kinzie Street, in 1847, and was controlled by Dr. Edward Mead, but these quarters proving too restricted, Dr. Mead purchased about twenty acres of land two miles north of the city, and, in 1847, a new asylum was ready for occu-

pation. This was a private institution.

The County Hospital was first opened March 30, 1847, in the old Tippecanoe Hall, under the direction of the professors of Rush Medical College, and under the especial control and management of Dr. and Mrs. J. J. Van Dalsem. In the Weekly Democrat of December 28, 1847, it is stated that "everything is done for the amelioration of the condition of the patients, and every possible care taken of them during their occupancy of the hospital," but that "the building is entirely inadequate to the requirements of a hospital, there being no regular wards," and in the male department there were forty or fifty patients suffering from various diseases. The reporter also states that "from the crowded condition of the hospital the aroma was pungent and particularly unpleasant." The number of patients present at one time fluctuated from seventy to one hundred; the total number admitted, up to the date of the reportorial visitation, being three hundred and seventeen.

In May, 1849, a temporary hospital for the treatment of cholera patients was located on Eighteenth Street, near the river. The Democrat, of June 12, 1849, also states that "we are informed that there is a house, on Erie street in the Seventh Ward, between Wells Street and the river, on the North Side, which is intended for cholera patients. When our informant was there, the bodies of a man and his son were in a coffin, while on a wretched pallet within sight was the wife and mother. There was but one attendant—a man." Dr. L. D. Boone, hospital physician, however, under date of June 14, 1849, controverts the full force of this assertion, by specifying that "the building is sixteen feet wide, forty feet long and twelve feet high; that it is divided into three rooms;" that the patients were attended by Dr. Hagerman, county physician; that there were two attendants, one "as good a nurse as can be found in the United States." Dr. Boone also states that "this is the second attempt that has been made by the city authorities to provide a place for homeless and friendless persons who might be attacked with cholera in the city, and also the second time that inhuman persons have threatened to demolish it." Two facts are deducible from the allegation and the refutation: that newspapers sometimes made sweeping assertions years ago, and that early residents of the city were just as unreasoning and apprehensive during epidemics as they ever have been Another communication from P. F. W. in later days. Peck, in the same paper, states that the first hospital was on Jackson Street, between State and Clark. This assertion is not verifiable from any extant record of reliable information.

THE ILLINOIS GENERAL HOSPITAL OF THE LAKE was incorporated October 29, 1849, at the second session of the Legislature of that year, the trustees under the incorporation being Hon. Mark Skinner, Hon. Hugh T. Dickey and Dr. John Evans. The Journal of September 24, 1850, contains an announcement that "Dr. N. S. Davis will give a course of five lectures in the City Hall-the free use of which is granted by the City Council—the avails of which are to be expended

in the purchase of furniture;" and Dr. Davis says, under date of September 26, 1850, that "the trustees have engaged a building adequate for the accommodation of fifty patients," but that furniture is required to fit up the hospital for their reception. Dr. Davis inaugurated his course of lectures, but on the Campbell Minstrels coming to the city he canceled his dates, the lectures remaining undelivered; and the Minstrels, then under the management of George A. Kimberly, in recognition of the courtesy of Dr. Davis and the Trustees, gave a complimentary concert for the benefit of the hospital. The course of lectures was thereafter completed, and the hospital was opened in the old Lake House, with beds for twelve invalids, on November 23, 1850, where patients could receive treatment gratis, upon payment of from two to three dollars a week for board and nursing. On November 30, 1850, the Board of Trustees met, adopted a code of by-laws for the government of the hospital, and elected the following officials, viz.: Mark Skinner, president; Dr. John Evans, secretary; Captain R. K. Swift, treasurer; Dr. Daniel Brainard, surgeon; Dr. N. S. Davis, physician; Dr. John Evans, physician to the female wards.

The Sisters of Mercy furnished nurses for the care of the patients from the opening of the hospital; but on the incorporation of the Mercy Hospital, on June 21, 1852, they determined on opening a hospital under the auspices of their order, and in June, 1853, removed to Tippecanoe Hall, and there cared for the county patients. The Illinois general hospital was then dis-

THE UNITED STATES MARINE HOSPITAL.-In the Weekly Democrat of March 10, 1846, appears an account of a meeting held at the Bethel church in this city, on Tuesday, February 25, 1846, for the purpose of inducing the General Government to establish a Marine hospital in Chicago. Of this meeting Mr. Brainard was chairman and Thomas L. Forrest, secretary. Colonel William B. Snowhook, Redmond Prindiville and Thomas L. Forrest were appointed a committee to submit the report of the meeting to Captain J. McClellan, of the Topographical Corps. Messrs. John Reed, E. Kelly, Henry Courting, James McNeil and Captain Sauly were designated as a committee to draft and circulate a petition asking Congress to locate a marine hospital at this port, for the benefit of sick and disabled seamen; and a vote of thanks was passed to Messrs. William B. Snowhook and Augustus H. Knapp for the interest and zeal they manifested in collecting information contained in the adopted report. The petition was drafted, numerously signed, and presented to Congress; and under

the championship of Hon. John Wentworth, who worked assiduously for the measure, a law was passed locating a United States marine hospital at the port of Chicago. It was built in the years 1850 and 1851 on Michigan Avenue, near the site of old Fort Dearborn, under the superintendence of Lieutenant J. D. Webster, of the Topographical Corps, at a cost of \$50,000, exclusive of the land which belonged to the Government, and was under the charge of Jacob Russell, collector and agent, with Dr. William B. Herrick, physician and surgeon, and C. R. Vandercook, steward.

In 1849, the executive committee of the Hibernian Society met, and, on May 7, passed the following resolution: Resolved, that we thankfully accept the liberal offer made by the faculty of the University of St. Mary of the Lake, of five acres, on the lake shore, north of the city, and that as liberal donations have been promised us, we proceed at once to erect a permanent hospital building. The site was just north of the German settlement. Despite the liberality of the donative and the sanguine temperament of the society, the hospital does not appear to have been erected.

In May, 1854, a temporary cholera hospital was built by the city, on the beach of the lake, in the North Division, and is stated to have been an enlargement of

the small-pox building erected in 1845.

In June, 1857, the first permanent City Hospital

was completed.

St. James' Hospital was organized in 1853, and incorporated in 1854, with the following officers and directors: Rev. R. H. Clarkson, president; George W. Dole, treasurer; Dr. A. B. Palmer, physician; Č. R. Larrabee, secretary. The board of directors were John West, Edwin H. Sheldon, John C. Dodge, William F. Dominick, Walter L. Newberry, S. H. Kerfoot, T. F. Phillips. In the spring of 1854, the hospital was established at No. 79 Illinois Street, and was mainly supported by contributions taken up on the first Sunday in every month in St. James' church, the deficiency unfilled by contributions being supplied by members of the congregation. During the first year of its maintenance it admitted sixty-nine patients and the expenditure was \$1,498.48. The number of beds was something less than twenty, and they were kept occupied by incurable cases; the hospital being maintained more for such cases than for those afflicted with casual and temporary ailments. In 1855, the hospital was removed to No. 111 Ohio Street, and there retained until the establishment of St. Luke's Hospital, in 1858, when the patients were transferred to the latter, and St. James' Hospital was discontinued.

# POLITICAL HISTORY.

The vast political influence the State of Illinois has wielded in deciding the destiny of the nation is due in great measure to the geographical location of Chicago within its borders. The result of the elections of 1860 would not have been a Republican victory had the northern boundary line of the State been an extension of the northern boundary line of Indiana, as was at first intended. This would have thrown Chicago and the fourteen northern counties of Illinois into the State of Wisconsin. These were all strong Republican counties, and it was their vote that carried the State for Mr. Lincoln. Without them he could not have carried it, and indeed had they been in Wisconsin it is possible that Mr. Lincoln would never have been a candidate for President at all. Hence it appears that the action of a far-sighted statesman, at the time of the admission of the State of Illinois into the Union, was of vast importance in shaping the ultimate history of the Union, and that action was taken chiefly because of the location of Chicago. The history, therefore, of the admission of the State of Illinois is the beginning of the political history of Chicago, though Chicago as yet was not, and its site was only occupied by a frontier post and a few trading houses.

It was a fortunate thing for Illinois and for the whole country that at the time Illinois applied for admission to the Union, the Territory was represented in Congress by Nathaniel Pope. He was a native of Kentucky, where he was born in 1784. He received a liberal education, and adopted the law as a profession. When the Territory of Illinois was set off from Indiana in 1809, Governor Edwards appointed him Secretary of the Territory and instructed him to proceed to Kaskaskia and inaugurate the new government, which he did prior to the arrival of the Governor. He held the position of Secretary until 1816, when he was elected Delegate to Congress. He served in that capacity until after the admission of the State, when he was appointed Judge of the United States District Court for the District of Illinois, which position he filled with eminent

ability until his death at Springfield, June 14, 1850. In January, 1818, the Territorial Legislature, then in session at Kaskaskia, sent a petition to Congress asking the admission of Illinois into the Union. This petition described the northern boundary line of the State as drawn at the southerly bend of Lake Michigan, being an extension of the northern boundary line of Indiana. The whole northern portion of the Territory was at that time still in the possession of the Indians and was uninhabited, save by the Indians themselves, and by a few frontiersmen and traders. But little importance was ascribed to it, and, besides, it was supposed that the ordinance of 1787 provided that the northern line should be drawn there.

By the fifth article of that celebrated ordinance it was provided that the Northwest Territory should be divided into not less than three, nor more than five States, and it defined the boundaries of three of the States. The western State was to be bounded by the Mississippi, the Ohio and the Wabash rivers; a direct line drawn from the Wabash and Port Vincennes due

north to the territorial line between the United States and Canada, and by the said territorial line to the Lake of the Woods and the Mississippi. It was provided, however, that if Congress should find it expedient they should have authority to form one or two states in that part of said territory which lies north of an east and west line drawn through the southerly bend, or extreme of Lake Michigan.

It was upon this provision that Wisconsin subsequently based her claim to the fourteen northern counties of Illinois.

When the bill came from the committee to be acted on by Congress, Mr. Pope, with a wise and statesmanlike forecast, moved to amend the bill by establishing the northern boundary line at the parallel of forty-two degrees and thirty minutes north latitude.

The object of this amendment, Mr. Pope said, was to gain for the proposed State a coast on Lake Michigan This would afford additional security to the perpetuity of the Union, inasmuch as the State would thereby be connected with the States of Indiana, Ohio, Pennsylvania and New York through the lakes. The facility, too, of opening a canal between Lake Michigan and the Illinois River made it desirable that the port of Chicago should be in the proposed State, so that the canal, when built, should be entirely in one State jurisdiction.

These considerations prevailed, and the bill was amended so as to establish the northern boundary line of the State, as it has since existed.

The bill became a law April 13, 1818, and in pursance thereof a convention was called at Kaskaskia to form a constitution. The State was formally admitted by Congress December 3, 1818.

Thus it was that Chicago influenced the formation of the great and imperial State of Illinois, binding the North and East by the chain of the great lakes, and the Mississippi River to the South and West, becoming the kev-stone in the western arch of States.

But many years were yet to pass before Chicago's influence was to be felt by means of elections.

When Illinois was set off from Indiana in 1809, it was divided into two counties. These were Randolph and St. Clair. The latter comprised the northern portion of the territory. As the population of the State increased new counties were organized, and Chicago has been successively in the counties of St. Clair, Madison, Crawford Clark, Pike, Fulton, Peoria and Cook.

The records of these counties do not recognize Chicago as a place, or a voting precinct, until it was embraced in Fulton County in 1823. The records of that county show that September 2, 1823, an election was ordered to be held at the house of John Kinzie for the purpose of choosing a Major and company officers of the Seventeenth Regiment of Illinois Militia, the election to take place on the last Saturday of September.

If this election was held, it was the first that ever took place at Chicago. No records nor returns of this election are extant, consequently it remains a matter of doubt whether the election called was held or not.

The first official account of an election actually held at Chicago appears in the records of Peoria County. It was held August 7, 1826, being a gubernatorial and congressional election. The poll-list from the Chicago precinct shows the names of thirty-five persons who voted, as follows:

Augustin Banny,
 Henry Kelley,

3. Daniel Bourassea, 4. Cole Weeks,

5. Antoine Ouilmette,6. John Baptiste Secor,

7. Joseph Catie, 8. Benjamin Russell,

9. Basile Desplattes, 10. Francis Laframboise, Sr.,

11. Francis Laframboise, Jr.,

12. Joseph Laframboise, 13. Alexander Larant,

14. Francis Laducier,15. Peter Chavellie,

16. Claude Laframboise, 17. Jeremiah Clairmore,

18. Peter Junio,

19. John Baptiste Lafortune,

20. John Baptiste Malast,21. Joseph Pothier,22. Alexander Robinson,

23. John K. Clark,24. David McKee,25. Joseph Anderson,

26. Joseph Pepot,27. John Baptiste Beaubien,28. John Kinzie,

29. Archibald Clybourne, 30. Billy Caldwell,

31. Martin Vansicle, 32. Paul Jamboe,

33. Jonas Clybourne,34. Edward Ament,35. Samuel Johnson.

The judges were John Kinzie, J. B. Beaubien and Billy Caldwell; clerks, Archibald Clybourne and John K. Clark.

The whole thirty-five cast a solid vote for the following ticket: Ninian Edwards, for Governor; Samuel H. Thompson, for Lieutenant-Governor; and Daniel P. Cook,\* for Congressman. On the State vote Edwards was elected by a small majority, but the other two were defeated.

The names of these voters indicate that the large majority of them were French half-breeds, French traders, and others connected with the fort or in the Government employ. They were for the most part employes about the fort, and the trading-houses, and voted precisely as their employers or the officers of the fort dictated. The election was held at the agency-house, on the North Side, the residence of Dr. Alexander Wolcott. As John Quincy Adams was President, it followed that the voters of the Chicago precinct at that time were all Whigs.

Daniel P. Cook.—The life and services of Daniel P. Cook covered but a brief period of time, but were of enduring value to the great State of Illinois. A Kentuckian by birth, he possessed all the social, genial qualities by which the noted men of that State are marked, and during the twelve years of his residence in his adopted home he developed, to a life-destroying degree, that quality of antiring industry which is a prominent trait of the people of the East. His services during four terms in Congress, not only gained him the admiration and the love of his constituents at home, but the respect of such statesmen of the day as Henry Clay, John C. Calhoun, John Quincy Adams and James Monroe. For the last five years of his short life Mr. Cook labored unceasingly—

For whom Cook County was named.

and, as regarded his delicate constitution—relentlessly, for that measure of public utility, which accomplished more than all else to build up northern Illinois into one of the most prosperous regions of the earth. The first grant of lands to the Illinois & Michigan Canal in 1827, was the commencement of the up-building of a great commonwealth, and especially of that region whose life and wealth has concentered, with such grand results, in the county of Cook. It was but a just tribute of remembrance to an earnest, an honest and a useful life, to stamp this region of future power with the name of one who, though cut down in youth, was so much its father and benefactor.

Daniel P. Cook was born of respectable and humble parents, in the county of Scott, Kentucky, in the year 1794. With merely a

D. P. Cook

common school education, and a brief experience in mercantile pursuits, he entered the law office of Hon. John Pope. In 1815, Mr. Cook removed to Kaskaskia, the Territorial seat of Government, to engage in the practice of law, and to strive for the success which was so soon to come to him. "The Illinois Intelligencer," the first paper published in the Territory, had been established six years. That journal had all the Government printing, which was, of itself, quite a profitable monopoly. On account of the sparsely settled state of the county, the practice of law was then at a low ebb, and, in order to add to his scanty income Mr. Cook, soon after settling in Kaskaskia, purchased the "Intelligencer" and formed a partnership with Robert Blackwell. The original proprietor of this paper, and from whom it was purchased by Messrs. Cook & Blackwell, was Matthew Duncan, the brother of Joseph. Joseph Duncan was afterwards a successful competitor for Mr. Cook's seat in Congress and Governor of the State. The paper became at once a political power, Judge Breese acting as one of disposition, coupled with the influence possessed by Judge Nathaniel Pope, then Secretary of the Territory, soon made themselves felt, and the bright young Kentuckian was elected Clerk of the Honse of Representatives, at the second session of the Second Territorial Legislature, serving in this capacity until January, 1818, when the last session of the Territorial Legislature adjourned. A portion of this period, also, from January, 1846, do, April, 1817, he acted as Auditor of Public Accounts. The next

day after the adjournment of the last Territorial Legislature Mr. Cook became "Judge" Cook, his district in the "Western Circuit" embracing the counties of Bond, Madison, St. Clair, Randolph and Monroe, or a territory comprising about one-third of the present State. He remained in office but a few months, no doubt wishing to give his whole energies to the movement then progressing for the formation of a State Government. In July, 1818, the constitutional convention assembled at Kaskaskia and adjourned in August. The Constitution was approved by Congress in December of that year. Illinois, therefore, did not formally and legally become a State until December 3, 1818. But by virtue of the Constitution adopted by the convention in August, an election for State officers and a Congressional Representative was called for the third Thursday of September. The question of slavery was even then dividing the councils of the young State, and the politicians of the day had separated into two sharply-defined parties, led respectively by Ninian Edwards, last Governor of the Territory, and Shadrach Bond, first Governor of the State. A strong disposition had been evinced by Governor Bond and his party to insert into the new Constitution some provision recognizing slavery as a necessary, because an "established" institution. Although better counsels prevailed and the slavery issue was not recognized as an element in the campaign, Mr. Cook was put forward as a Congressional candidate for the short term expiring March 3, 1819, and as a representive of the Edwards faction; while John McLean, of Shawneetown, also a Kentuckian by birth, and a brilllant and irreproachable member of the Bar from southeastern Illinois was his opponent, and the representative of the Bond party. This campaign, therefore, resolved itself into a personal contest for popularity, waged by two talented and energetic young men, supported by parties of nearly equal strength. As would be expected, the result was close; Mr. McLean was returned by only fourteen majority.

Mr. Bond was inaugurated as Governor October 6, 1818, and upon the organization of the State government in December, Mr. Cook was elected Attorney-General by the Legislature, and held the office until the conclusion of his more successful contest with Mr. McLean in the summer of 1819. The proposed Missouri Compromise had now entered Congress, had became a national issue, and divided the country. During his term of service Mr. McLean had taken his stand with the pro-slavery party and against the re-striction of slavery to the future state of Missouri. The second campaign between himself and Mr. Cook was therefore fought on Cook was elected by a good majority. He was re-elected to the Seventeenth Congress, his competitor being Hon. E. K. Kane, first Secretary of State, and who was a stubborn representative of the pro-slavery element. It was understood, at the time, that Mr. Cook favored the admission of Missouri as a slave State, merely as a matter of policy. To the surprise and indignation of many of his supporters, at the next session of Congress he voted against the measure. While the bill was before the House of Representatives he frankly admitted that he had changed his mind, and gave as his only reason that the proposed Constitution of the new State was not in conformity with the principles of the Constitution, in that it proposed to bar out free negroes and mulattoes from settling in Missouri, notwithstanding they had the power, and had availed themselves of it, to purchase and hold property. Missouri proposed to pass ex-post facto laws—laws impairing the obligation of property contracts which these people had made. Mr. Cook re-peated that his "feelings" were in favor of the admission of Missouri-that "both personal and political reasons rendered it a desirable event."

On May 6, 1821, Mr. Cook married Miss Julia C., the eldest daughter of Governor Ninian Edwards, an accomplished, beautiful and loveable woman. One child, John Cook, was born to them, June 12, 1825, in the town of Belleville, St. Clair County. He was afterwards a prominent citizen of Springfield, Sheriff of the county, member of the Legislature, and mayor of the city.

Although Mr. Cook had already made his mark in Congress, among other measures having introduced a bill giving actual settlers on public land the rights of pre-emption, it was reserved for him, during the session of the Eighteenth Congress to commence a work which he lived to see completed, and which was the crowning success of a successful public career. Relying upon the opposition which had been aroused because of Mr. Cook's course on the Missouri question, Mr. McLean led the opposition against his political rival at the general election of 1822. He was defeated by nearly one thousand votes. It was at this session of Congress that, with the earnestness and faithfulness which marked all his efforts, Mr. Cook urged upon that body the justice of granting such aid to the State of Illinois as would insure the construction of the Illinois & Michigan Canal.

Says William H. Brown, in his memoir: "In 1822 this subject was brought directly before Congress. Mr. Cook labored to

secure such aid from the General Government as would enable the state to prosecute this important work. He asked for bread and received a stone. The utmost extension of congressional liberality was a grant of a strip of land, uinety feet wide, through the public domain, from the Illinois River to the lake; and lest, by any means, the Congress of the United States, after such a munifi-cent grant, should be further committed, a saving proviso was added, that the United States should in no wise become liable for any expense incurred by the State 'in surveying or opening said canal.' In the intervening years, from 1822 to 1827, Mr. Cook urged this measure in Congress as a national work, in which other States were as directly interested as his own, and affording to the Government in time of war, great facilities in the movement of troops and transportation of stores. The result of his labors was the passage of the act of March, 1827 (the last session of his congressional career), granting, in fee simple, to the State, and without any reservation, the alternate five sections upon each side of the canal, amounting to more than three hundred thousand acrcs of land, and embracing the site of the city of Chicago. This act was worthy of a Congress representing a great Nation, and is wonderfully in contrast with that of 1822. But its greater and more enduring value was the precedent for future grants, embracing that for railroad purposes, the effect of which we now feel in the enhancement of the value of property, the increase of business and the general prosperity of the State."

In 1823-24 the State was greatly agitated over the attempt made by the pro-slavery members of the Legislature to have a convention called for the adoption of a new Constitution, legalizing the "institution" within the limits of the commonwealth. Although the proposition was carried by the Legislature, when submitted to the people in 1824 the measure was rejected by 1834 majority, out of a vote of 11,764. The vote of Fulton County, which then comprised Cook, was 5 for and 60 against the resolution for the calling of the convention. Daniel P. Cook, with such men as Governor Coles, Judge Pope, Governor Edwards, William H. Brown, and Samuel D. Lockwood, was found in the front ranks,

faithfully fighting the abomination.

Mr. Cook's competitor for Congress in 1824 was ex-Governor Bond, and as it was a close "presidential year" when the election of the National Executive might be thrown into the llouse of Representatives and even be decided by Illinois, the contest was exciting. Governor Bond was, however, defeated by over three thousand majority. The President was chosen in the House of Representatives, and Mr. Cook cast the vote of the State of Illinois for John Quincy Adams. It is not necessary to vindicate the young congressman from the charge of "broken faith with his conyoung congressman from the charge or booken and with most stituents, "which was brought against him by his political opponents and the warm friends of Mr. Adams' presidential rivals. For an explanation of the pledge he made, and how he kept it, the reader is referred to the best known authority on this subject.\* Mr. Cook was a candidate for re-election in 1826, but was defeated by General Joseph Duncan, a resident of Jackson County, and, al-though still young, a Lieutenant of the War of 1812 and a State legislator of some experience. He went into the canvass with ardor, and his opponent's friends were so confident of their accustomed success that they did not put forth counter efforts. Others were anxious that Mr. Cook should become a candidate for the Senate. He was defeated by a majority of 641. But his term of service both as a congressman and as a man, was gradually approaching its close. The arduous duties which fell upon his shoulders during the session of 1826-27 were too much for his enfeebled constitu tion, and during the last days of his life at Wash ngton he was confined to his bed. In the spring of 1827, by the advice of his physician, he departed for Cuba, in a vain search for lost health and strength. Early in the month of June, however, he returned to the home of Governor Edwards at Belleville. He gradually went into a consumptive's decline, and, while on a visit to his father, in his native place in Kentucky, he died, October 16, 1827 Thus there passed away from earth, one of those rare, small, frail men of body, who seem inspired from the first with the thought their might before that time comes upon them so quickly in which no man can labor. Such men are given to the world as one of its powers of progress, and must be accounted by the Higher Power, as necessary to its onward march, as those men of both physical and intellectual might who, through the ceaseless perseverance of a long life, are accorded the privilege of working out to their conclusion some of their dearest plans for the public good.

The next election of which there is a reliable account was purely local, it being for the election of Justice of the Peace and Constable. It was held July 24, 1830, at the house of James Kinzie, on the West

<sup>\*</sup> History of Illinois and Life of Ninian Edwards, by his son, Ninian W. Edwards,

Side; fifty-six voters turned out. John S. C. Hogan, afterward Postmaster, was the successful candidate for Justice over Archibald Clybourne. It was probably quite an exciting election, as a much larger vote was polled than at the State election held only about a week afterward.

At the State election held August 2, 1830, thirtytwo voters exercised their privileges at the Chicago precinct, twenty-two of whom supported the somewhat celebrated John Reynolds for Governor. Reynolds was a Jackson Democrat, and was elected by a triumphant majority. Chicago, unanimously Whig in 1826, was now strongly democratic-two to one-Jackson being the President. This election was held at the house of James Kinzie, on the West Side. The judges of election were: Russel E. Heacock, J. B Beaubien, and James Kinzie; the clerks were, Madore B. Beaubien

and Rev. Jesse Walker.

Prior to the organization of Cook County, in 1831, there was not a sufficient number of voters in Chicago, or in fact in all the region roundabout, to make them even a disturbing element in the politics of the State. What few there were seem to have had no political party predilections whatever, further than to vote with the dominant party, and for several years thereafter party lines were not strictly drawn in the local elections which occurred. In the congressional election held in August, 1832, the county, then embracing the present counties of Lake, McHenry, DuPage and Will, there were cast at the three precincts, one hundred and fourteen votes, of which number ninety-four were for the Democratic candidate for Congress, Joseph Duncan, of Jacksonville, who was elected. His competitors were Jonathan H. Pugh, Whig, who received nineteen votes, and Archibald Clybourne, who received one

State and county officers were elected at the same time, which show more local or personal than political preference. The votes were: For State Senator-James M. Strode Galena, eighty-one votes; James W. Stevenson Galena, twenty-six votes; J. M. Gay, four votes. For State Representative—Benjamin Mills Galena, one hundred and ten votes. For Sheriff-Stephen Forbes Chicago, one hundred and six votes; James Kinzie Chicago, two votes. For Coroner, Elijah Wentworth, Jr. Chicago, one hundred and four votes. The votes of the different precincts, Chicago, Hickory Creek, and DuPage, are not separately given in the list\* from which the above returns are taken. Chicago had been entirely depopulated by a cholera panic in July, and it is not probable that any large part of the vote was cast at that precinct. This was the first general election after the organization of Cook County.

So far as appears from the votes cast at presidential and congressional elections after 1832, the returns of which will be given further on, Chicago and Cook County seem to have been unswervingly Democratic for the succeeding twenty-two years, during which time, with but a few exceptions when the councils of the party were divided (1840 and 1848), it did not fail to give a majority for the Democratic candidate, whoever he might be, and regardless of all local issues tending to swerve voters from party allegiance. It was not until it had seen buried in oblivion the party which had been its ancient and worthy foe, and its own party disintegrations throughout the nation had become apparent, precipitated, although not caused, by the acts of one of

Chicago's most gifted and idolized citizens, that the Chicago Democracy knew defeat. The following election returns will show the strength of the opposing political parties at the periods designated:

1834—Gubernatorial election, August 4 Cook

County

FOR GOVERNOR .- William Kinney (of Belleville , Whig, 201; Robert K. McLaughlin (of Vandalia), 10; Joseph Duncan of Jacksonville), Democrat, 309; James Adams of Springfield, 8-528.

1836 - Presidential election, November (Cook County). FOR PRESIDENT-Martin Van Buren, Democrat, 519 votes; William Henry Harrison, Whig, 524

1838—Congressional and gubernatorial election, August (Cook County). Congressman—Stephen A. Douglas, Democrat, 1,667 votes; John T. Stuart, Whig, 839 votes. Governor-Thomas Carlin, Democrat, 1,664

votes; Cyrus Edwards, Whig, 832 votes.

This was a most exciting campaign. The recent financial collapse, which had left business in a state of paralysis throughout the country, had been attributed largely to the financial policy of Jackson's and Van Buren's administrations, and the Whig party, with a vigor inspired by high hopes of riding into power on the waves of prevailing discontents, were contesting every election, thus preparing the way for the great presidential campaign of 1840, which resulted in a victory so overwhelming as to endanger the victors by its

completeness.

During this campaign Stephen A. Douglas, then a a young man of twenty-five years, made his first appearance in Chicago as a political orator. He had been in the State but five years, his home being first in Winchester, a small town some fifteen miles from Jacksonville, and later in Springfield. During this time he had taught school, completed his law studies, been admitted to the Bar, and by his marvelous powers fought himself to a prominent position among the oldest and ablest members of the Illinois Bar. At the age of twenty-two years he was elected by the Legislature as Attorney General of the State; when twenty-three years old he was a member of the Legislature; and a year later his talents received national recognition through his appointment by President Van Buren to the office of Register of the Land Office at Springfield, Ill. In 1838 he received the Democratic nomination for Congress, and with the uncompromising pluck which characterized his whole life canvassed the whole district, holding joint discussions with his opponents or speaking alone, during every evening, except Sundays, for the five months preceding the election. It was at the close of this remarkable campaign that he spoke at Chicago. The meeting was held in the Saloon Building, August 4. The fame of the "Little Giant" had preceded him and the hall was packed with an eager crowd whose curiosity to see and hear the young orator was little less than their interest in the exciting political issues he was to discuss. It is a matter of history that on his debut he took the entire crowd by storm. He was applauded to the echo, and a Whig, William L. May, who arose to reply, was hissed down and failed to get a hearing. For sixteen years thereafter Douglas led captive the Democracy of Chicago, and held their destinies in the hollow of his hand. The vote polled at the Congressional election was the largest ever at that time polled in the State, aggregating over 36,000 votes; so close was the contest that the result was not officially declared for several weeks, when the Whig candidate was declared elected by a majority of five votes only.

See supplement to lecture of Hon. John Wentworth, Fergus's Historic Series, No. 8, p. 43.

† See corporate history of Chicago, and fearly history elsewhere in this

1840—Presidential election, November 3 Cook County). For President—Martin Van Buren, Democrat, 1,989 votes; William Henry Harrison, Whig, 1,034 votes. Chicago) For President—Van Buren, 807 votes; Harrison, 622 votes,

1842—Gubernatorial election (Cook County). For GOVERNOR, Joseph Duncan, Whig, 625 votes; Thomas Ford, Democrat, 1,328 votes; — Hunter, Abolitionist,

37 votes.

1842—Congressional election (Fourth District). Giles Spring, Whig, 891 votes; John Wentworth, Democrat, 1,172 votes. Mr. Wentworth was re-elected in 1842, 1844, and 1846, serving four terms in Congress successively as a Democrat.

1844—Presidential election, November 4 (Cook County). For President—James K. Polk, Democrat, 2,027 votes; Henry Clay, Whig, 1,117; James G. Birney, Abolitionist, 317. (Chicago) Polk, 136 votes; Clay,

850 votes; Birney, 209 votes.

1848. — Presidential election, November 7 (Cook County). FOR PRESIDENT—Martin Van Buren, Free-Soil Democrat, 2,120 votes; Lewis Cass, Straight Democrat, 1,622 votes; Zachary Taylor, Whig, 1,708 votes. (Chicago) Van Buren, 1,543 votes; Cass, 1,016 votes; Taylor, 1,283 votes.

1850—Congressional election, (Cook County). For Congressman, R. S. Molony, Democrat, 2,863 votes;

Churchill C. Coffing, Whig, 1,880 votes.

1852—Presidential election, November 3 Cook County.) For President—Franklin Pierce, Democrat, 3,767 votes; Winfield Scott, Whig, 2,089 votes; John P. Hale, Free-Soil, 793 votes. Chicago) Pierce, 2,835 votes; Scott, 1,765 votes; Hale, 424 votes.

1854—Congressional election Cook County. James H. Woodworth, Free-Soil, 3,448 votes; Turner, Demo-

crat, 1,175 votes.

1856—Presidential election, November 4 Cook County). For President—John C. Fremont, Republican, 9,020 votes; James Buchanan, Democrat, 5,680 votes; Millard Fillmore, Whig, 342. Chicago Fremont, 6,370 votes; Buchanan, 4,913 votes; Fillmore, 332 votes.

1856—Congressional election Cook County). John F. Farnsworth, Republican, 8,993 votes; John Van

Nort Wyke, Democrat, 5,572 votes.

1858—Congressional election 'Cook County'. John F. Farnsworth, Republican, 10,108 votes; Thomas Dyer, Douglas Democrat, 8,278 votes; Robert Blackwell, Ad-

ministration Democrat, 305 votes.

1866—Presidential election, November 7 Cook Countyl. For President—Abraham Lincoln, Republican, 14,589 votes; Stephen A. Douglas, Democrat, 9,846 votes; John Bell, Straight Whig, 107 votes; John C. Breckenridge, Southern Democrat, 87 votes.

1860—Congressional election Cook County. Isaac N. Arnold, Republican, 14,663 votes; Augustus Har-

rington, Douglas Democrat, 9,791 votes.

The returns of such important elections as have been before given are sufficient to indicate to the reader the political status of Chicago and Cook County through the period of the twenty-five years here in review. In 1836 Cook County gave Harrison, Whig, a majority of five votes in a total ballot of 1,041. His vote was largely increased by his being a Western man and in closer sympathy with the frontiersmen than was his Eastern political opponent, Van Buren. Two years after, in 1838, with no such disparity in the popularity of the opposing candidates, the Democrats carried the county by a majority of 828 in a total vote of 2,506; the Democrats outnumbering the Whigs, two to one. In

1840, when the enthusiasm of the hard-cider-Tippecanoe campaign swept the country like a prairie fire, both Cook County and Chicago stood rock-bound against the popular wave, and gave a majority for Van Buren, in spite of Harrison's personal popularity: the county 835, in a total vote of 3,023; the City of Chicago, 185, in a total vote of 1,420.

The Democratic ascendancy remained uninterrupted until 1848. In the presidential election of that year two Democratic candidates were in the field: Cass the regular nominee, and Van Buren, who had been nominated by Northern Democrats, who took issue with their Southern brethren on the admission of Texas as a slave State. The Democratic forces thus being divided and demoralized, the Whig candidate, Zachary Taylor, received a small majority over Cass, both in the city and county. The aggregate vote, however, of both wings, showed that the united Democracy still held the power at the ballot box in a ratio of two to one.

The election of 1850 showed the usual Democratic majority, as did the presidential election of 1852, the majority for Pierce, Democrat, being, the latter year, 646 over the combined vote of the Whigs for Scott and the Free-Soilers for Hale in the city. In the

county the Democratic majority was 885.

Here the Democratic ascendency, which had been uninterrupted for almost a generation, ceased, and for as many years thereafter the party struggled in a minority, only fitfully broken by some local issue on which a fusion with other opponents of the Republican party brought a temporary or partial victory.

In 1854 the vote for a member of Congress gave to the Republican candidate a majority of 2,273 in a total vote of 4,623, the tables being completely turned, and the ascendency of the Republicans being now established on the former Democratic ratio of two to one. The reader can trace the subsequent history of political party power and weakness up to 1860 in the preceding pages. The further history of Chicago's career as a Republican stronghold will appear in future

The decline of Democratic power in Chicago was in a sense attributable to the same causes which destroyed its efficiency and strength as a National party, and in that sense need not here be discussed. The gradual decadence of the old Whig party, which for nearly fifty years had been in constant antagonism to the Democratic party, would have left it undisputed master of the field, but for the evolution of a new party on the issue of slavery or no slavery in the Territorial domain of the Nation. The question of the abolition of slavery was not the basis on which the Republican party was founded, nor was the abhorrence in which the institution was justly held by a large part of the Northern people sufficient to break old party ties or bring into existence a party that could rule the destinies of the Republic. Until the stern necessities of war wrung from that cautious, wise and freedom-loving patriot, Abraham Lincoln, against the protests of many of his trusted advisers, the Emancipation Proclamation, the Republican party, although opposed to the extension of slavery and favoring its restriction to its existing territorial . limits, had abjured all sympathy with the formerly decried but now glorified party known as abolitionists. Nevertheless, although their doctrines were repudiated openly, they were, from the beginning, a constant and ever increasing educational power, imbuing the popular heart with their own abhorrence for the cursed institution itself, and preparing it for the great conflict which in good time was to come. It was precious seed they

sowed as they "went forth weeping," and not a few of them lived "to come again rejoicing, bearing their

sheaves with them."

The student of Illinois history is conversant with the early history of slavery as it had a bearing on the destinies of the State. He has read of the efforts, well nigh successful, which were made to legalize the institution in Illinois in 1824. As late as 1840, with a view to inducing Southern planters to settle in the State with their slaves, and to insure peace and harmony with the neighboring slave States, many openly advocated the introduction of slavery. Through all the various laws passed by the State Legislature had run a peculiar code which precluded the residence of free negroes in the State, except under conditions but little better than those of actual slavery. They were incompetent witnesses in any case where a white man was the plaintiff or defendant, and except they could show free papers were subject to arrest, imprisonment, and, after due advertisement, no master appearing, the negro so arrested was sold by auction for the costs of his arrest. The sale thus made placed him under as absolute control of his new master as though he had been a born slave in the South. The same penalties were provided for insubordination or other offenses, including that of running away, as for slaves, and throughout the code "slaves" and "servants" colored were subject to the same penalties and restrictions.

Under this code of laws, modified, but not repealed until the War of the Rebellion was ended, free negroes had few rights which white men were bound to respect. Among the posthumous papers of the late Zebina Eastman, who, at the time of his death was engaged on this volume, is an exhaustive history in manuscript, of the "Black Code of Illinois," which he in common with other early Abolitionists opposed for nearly half a century before they saw it obliterated. The papers are deposited with the Chicago Historical Society, pending their publication. Mr. Eastman thus sketches the end

of class legislation against negroes in Illinois:

" After this there came upon the nation the storm of God's terrible swift judgments, in his thunder and his lightning, and things were not what they seemed before. What had been prayed for by timid women for a generation and unheeded, to remove the curse of our apostacy from the honor of the State, was answered very suddenly at length by the spontaneous action of stern and earnest men. The storm of the Rebellion was a revolution, the most complete ever falling over the fate of a race-to the colored people of the country, bond or free. If the slaves even had become free, real freedom should come to the colored people of Illinois, and their coming here should no longer be a 'High Misdemeanor' as the statutes still declared it. There were whisperings that the Black Laws should be repealed. After the emancipation had been effected, John Jones, a mulatto well known in Chicago, a man free-born, yet who came under the ban of the law and filed his certificate of freedom with the Chicago Historical Society, carried a petition through the streets of Chicago, asking for the repeal of these laws. He went to Springfield, backed by influential citizens, and engineered the enterprise. Through his efforts the end came speedily. Through Senator Lansing of McHenry County, first moving early in the session of 1865, for the repeal of these laws, and the steady process of the course through the legal forms, we see, at last, as with a blow, four years after the breaking out of the Rebellion, every vestige of the Black Code swept from the statute book.

Therefore in the laws of 1865, there is the following enactment, with this title abreviated:

"An act to repeal Section 16, Division 3, Chapter 30, and Chapter 74, of the Revised Laws, etc."—and this is the immortal act:

"SECTION I. Be it enacted by the people of the State of Illinois by the General Assembly; that Section 16, Division 3, Chapter 30, of the Revised Statutes of the State entitled 'Criminal Jurisprudence;' and Chapter 74 of said Revised Statutes, entitled 'Negroes and Mulattoes,' and an act of the General Assembly of this State approved, February 12, 1853, entitled 'An act to prevent the immigration of free negroes into this State' be, and the same are hereby repealed; also, Section 23, Chapter 40, Revised Statutes, entitled, 'Evidence and Deposition.'

"Section 2. This act to be in force from and after

its passage." Approved February 7, 1865.

Mr. Eastman with the exultation of a fearless, outspoken, conscientious abolitionist of the old school, who had lived to see the full consummation of his life-long work, and the fruition of his early hopes, thus closes:

"This is one of the immutable laws, that stand for-

ever! Every pigeon-hole of the legal archives was ransacked, and every taint of color in our laws searched

out and buried forever."

Under these laws negro servants were advertised as runaways in the daily papers of Chicago, and the labor of free negroes sold. The more serious phases of the working of the atrocious laws did not often appear in the northern part of the State. Mr. Eastman's papers, before alluded to, abound in incidents illnstrative of the working of the black code. Among them is one having

its scene partially laid in Chicago:

One Nicholas Jones, a free-born colored man, born and reared in the South, there married (or rather took to himself, as no marriage like his was valid a black woman who was a slave. They had several children. All efforts on his part to purchase his family having proved unavailing, he fled with them to the North, and came to Chicago to live. An agent of his wife's owner traced these fugitives to their city of refuge, where, with the co-operation of one Henry Rhines, the whole family, including the free-born husband were arrested, bound, bundled into a carriage and started for the South. Mr. Eastman states that their repeated calls for help along the road were unheeded until they had reached Ottawa, crossed the river, and commenced to cross the prairie beyond. There they were stopped by Sheriff William Reddick, and forced to show their claim to the colored cargo. Under the existing laws their right to the woman and children was established, but Jones himself was set free, and was allowed to return wifeless and childless and broken hearted to Chicago. Jones stated that while he was on his way to Ottawa, he saw Rhines rob his wife of what little money they possessed, which she had concealed about her person. The date of this occurrence is not given. The story is a sad one, but it does not seem to have stirred the unsympathetic heart of either of the then leading political parties.

Below are other incidents in the history of Chicago having a bearing on the early development of anti-

slavery sentiment in Chicago.

An advertisement published in Chicago in 1837, in the Commercial Advertiser, Hooper Warren, publisher, read:

"ONE CENT REWARD. — Disappeared from my residence, on the morning of the 2d inst., an industrious

Black Girl, named Eliza Ann Thompson, about fourteen years old, rather large of her age, and foxy-looking; a great liar, and would steal some; as she not only has taken away her duds, but some other fixings which she had no right to. As near as I can ascertain, she was persuaded to run away by a bull |! negro by the name of Joe Abbey, who had been prowling about my house some time for that purpose. I forbid all persons harboring or trusting her on my account, as I will pay no debt or debts of her contracting after this date. The above reward will be given for her delivery, but no charges paid.

"January 3, 1837. John C. Hugunin."

In 1842, Edwin Heathcock, a colored man, industrious and well-behaved, and a member of the Chicago Methodist Church, was working in a field on the North Branch of the Chicago River, having hired out as a laborer to earn wages for himself. While so employed, a wordy quarrel arose between himself and employer, or some fellow workman, in which language was used not comporting with the dignity of either white or black, and which came near ending in a more serious affair. In retaliation the white man had the negro arrested on the ground of being in the State of Illinois without free papers or having given bonds. Heathcock was brought before Justice L. C. Kercheval, who had given much attention to the law governing such cases, and he promptly committed the negro to jail. It was impossible to make Heathcock say that he ever had a master or owner, or ever even wanted one. He was put in charge of Sheriff Samuel J. Lowe, in the log jail on the northwest corner of the court-house square; the Grecian-columned brick court-house gracing the eastern corner. He was duly advertised for sale in the "Chicago Democrat," for six weeks, with the constitutional cut of a runaway negro, bare-headed, with a bundle held over his shoulder on a stick. The day of sale was to be Monday, November 14, 1842, if no master came to claim him. On the Saturday night preceding the sale, Mr. Eastman met, on Clark Street, Calvin DeWolf, then a young law student. Together they went to the printing office of the former, where by the dim light of an oil lamp, Mr. Eastman set up in type a little hand-bill headed, "A Man for Sale," giving the date and place of the Monday morning sale, and inviting the citizens of Chicago to be present. stood behind the press and rolled, while Eastman pulled. The bills finished, they went out with their paste-pot and pasted them along the board fences that surrounded the court-house square, and pretty well lined the forty yards up and down Clark Street, where the citizens could have a fair chance to encounter them as they passed to and from their places of worship the following day. The bills were a surprise to some, and an offense to others, as was proved by the splashes of mud and tobacco which disfigured some of them, while others were torn from their exalted positions and trampled in the mud of early Chicago. Enough had been seen, however, to draw a crowd on Monday morning that blocked the corner of LaSalle and Randolph streets, and up the latter to the front of the log jail. Sheriff Lowe brought out the man, whom the law had put into his hands for sale. Says Mr. Eastman:

"I believe it was the only slave sale that ever took place in Chicago. Chicago, however, always does justice to her natives. Its first white settler was a black man—Jean Baptiste Point De Saible—who preceded John Kinzie in the settlement of Chicago, and who is the black root from which all our glory has sprung—the parent of the half million population; so before they

sold a negro as a slave in 1842, they previously made a precedent by selling a white man; for before this, some time in the thirties, as Judge Caton testifies, a Maryland vagrant (there being nothing here that could be done for him) was sold as a vagrant or vagabond, and was bought by George White, the black crier of auctions and lost children. So the way was justified for this sale by Sheriff Lowe.

"Sheriff Lowe brought out his prisoner, placed him on the sidewalk and offered him for sale, to pay the expenses of his imprisonment. There were people enough there to have invited strong competition for a bargain. Edwin Heathcock seemed to shudder from the effect of the chill air, in contrast with the seething jail, or from the fact that he was passing through a scene to which he was not accustomed. Some of us might have felt a little queer, if we were being sold by the Sheriff, instead of our horse or our dog. Sheriff Lowe tried to be complacent; but being an Englishman, although a good Democrat enough to be Sheriff, he felt himself encumbered with embarrassing circumstances, and he was rather solemn. The people looked on glum and scowling. He offered the man for sale, and called for bids. The offer was answered by expressive silence. He felt called upon to explain that he was only the agent of the law, and that as the man had been committed and had not proved his freedom, neither had any master proved that he was a slave, the law required him to sell the negro to pay expenses-pay for solving that muddle of the law, which itself could not solve; but Sheriff Lowe did not admit that. No bids came in. The auction went on ;- 'Here is an able bodied man; I am required to sell him for a term of service, for the best price I can get for him, to pay his jail fees. How much am I bid, and so on,' No bids. Said he, 'Gentlemen, this is not a pleasant job. Don't blame me, but the law. I am compelled to do it. If I can get no bid for this man I must return him to jail. The law requires me to sell him; if I get no offer, I must return him to jail, and continue the sale at another time.

"Still no bid came at these pathetic appeals. Like the Irishman who had joined himself to a potato cask by putting his hand through the bung-hole and grasping a potato, he had got a man on his hands, and he couldn't drop him. Finally the threat of putting the poor man back into that miserable jail prevailed so far that a voice was raised from the opposite side of the street-'I bid twenty-five cents,' This was the voice of the late Mahlon D. Ogden. Appeals were made in the usual manner for an increase of the bid. 'Do I hear no more—only twenty-five cents for this able-bodied man; only a quarter?' But no further bid was made, nor did the good Mr. Ogden raise his, and the man was struck off to Mahlon 1). Ogden for twenty-five cents. Mr. Ogden took out a silver quarter and handed it to the Sheriff, in presence of the crowd, who gave a liberal cheer. He then called the man to him. 'Edwin, I have bought you; I have given a quarter for you; you are my man-my slave! Now, you go where you please,

First Passenger on the Underground Railroad to Chicago.—Mr. Eastman says: "I believe I sent the first passenger on the underground railroad to Chicago, but he had to go through Chicago not alone into it to get to freedom." The facts, as given by him, are as follows:

In the fall of 1839, Mr. Eastman was living in the little town of Lowell, on the Vermilion River, in La Salle County. On a very cold morning in October of

that year, a farmer came to him, stating that he had met a very strange person down on the river bank, who upon his approach aimed a shotgun at him with a warning to keep back, and that he believed he was a fugitive of some kind-perhaps a runaway slave. Mr. Eastman asked the farmer to go back, and if it was a black man, tell him he was among friends, and bring him up to him. The farmer soon reappeared with the stranger, whom Mr. Eastman describes as a most strange, famished, terrified negro, clad in rags and skins, and armed with a murderous looking knife extemporized from the end of a scythe, and an equally rough looking gun, both of which he carefully guarded, evidently suspicious that they might be taken from him. Other neighbors joined Mr. Eastman and his companion, and the negro was finally made to believe that even if, as they suspected, he was a runaway, no harm would be done him-that he was among friends. One of the party, whose home was nearest the spot where this interview occurred Mr. H. L. Dutton, afterward a resident of Hyde Park, took the fugitive to his table, and a good meal had the effect of thaving his reticence and loosening his hitherto silent tongue. It being now understood, although the man did not admit it, that an escaped slave was present, plans were discussed as to his disposal, which was not so easy a matter to determine in 1839 as it might seem to the reader of 1884. Mr. Eastman says:

"We were living in a moral community. On one side of the river, and not a gunshot distance from us was a Congregational church; on the other side was Vermilionville, with a Baptist church, and a Methodist meeting; and the founder of the town named in Peck's Guide Book of Illinois was a leader in the Baptist Church, and a reader of the Chicago Democrat. This man was an exemplary man, but, alas, he was a Democrat! Down the river a little way was another exemplary man, who was an attendant at the Congregational Church; but, alas, he was a Whig! The little party that had determined to engage in the unlawful business of sheltering-perhaps, in the sense of the law, secreting-this runaway property consisted of four; the one who had just fed him was a deacon of the Congregationalist Church; another who had fallen into this bad business was a leader in this Baptist Church of Vermilionville; another was a boisterous millwright who was in for the fun of the thing; and the fourth was myself, who at that time represented the sense of the no offense in hindering us; but there was a grave offense in our hindering that 'any person,' who figures so largely in authority in the law. So now, in all this we were willful transgressors. There were enough of us to have made it a 'conspiracy' if we had been negroes; and we should have been seditious, and might have been dispersed by proclamation, or treated as rioters by force of arms, and as white men subjected to imprisonment. We knew the penalty to which we made ourselves liable, and therefore added to our other sin that of concealing the crime. We were moral thieves in thus projecting plans, secretly to run that negro into freedom. We knew that the most active man among us, and probably his good wife, had already made themselves liable to a five-hundred-dollar fine in giving that man a breakfast. That Democratic farmer who had left us had already made himself liable by bringing the negro up out of the bushes by the river bank. I had made myself liable by the 'comfort' I gave him while standing in the roadhe, in the meantime, not permitting me to handle his shotgun. We all began to realize that we were in for it, and might as well 'be hung for an old sheep as for

a lamb.' So we resolved to take him over the river to a farmer from New Hampshire, who we knew was a reader of the Bible and Rogers's Herald of Freedom, and there secrete him till he could be sent to Canada. And then we all went stealthily down to the river, not by the common road and the ford, but by a pathway through the bushes, and crossed the river by stepping from stone to stone. As we thus passed along in Indian file, the negro in the midst, we knew that we were breaking the law of Illinois. We were aiding him to escape, and were liable to be indicted. We thought of the good Baptist world at large. Now, as we discussed the matter in the presence of that rabbit-skin-clad negro, we considered how we could possibly protect him, and get him safely off to that land of freedom in Canada. At the word Canada this stolid man's eyes seemed to kindle up with some expression of intelligence. The thought came over one of the party that if any person might desire to interfere with our intentions, that is, hinder us, it might be necessary for us to 'hinder' him, in the language of the law that makes 'hinder' an offense, with penalty of imprisonment. Now, there was the Democratic founder of the town, and the good Whig Justice of the Peace, further down, and we would rather have met the devil than either that Whig or Democrat. We thought of the religious community up in that village we must needs pass if we took the common road, and as Fred Douglass said, 'would rather meet a wolf than a Christian.

"Skulking along under the shelter of fences and bushes, the party reached the house of the New Hampshire farmer, who 'read the Bible and Herald of Freedom,' and found in the 'bay' of the old fashioned New England barn a safe hiding-place for the fugitive, who, fairly in the hay almost to his eyes, opened his heart and disclosed the story of his wrongs, his sufferings, and his final escape from the Alabama plantation to the sympathizing circle seated on the railing of the He had supposed vaguely that 'the North meant liberty, and that Illinois was a part, at least, of the North, and found out his mistake in geography when, having reached the State, after incredible hardships, he was arrested as a runaway slave and thrown into jail. He was advertised, but no master appearing, was sold to pay jail expenses. After serving his time with his new master, he again started for the land of freedom, which he now knew was Canada, and had reached the little hamlet where Mr. Eastman lived before he found 'aid or comfort.' He remained one night in the barn to which he had been taken, and the next night farmer Clark took the first passenger to the nearest station on what became the great 'under-ground railroad,' and which later had so many branches centering in Chicago. The first night the fugitive reached Ottawa, thence on by night stages in farmers' wagons to Northville, then to Plainfield, to Cass, then to Deacon Vial's at Lyons, who brought him to Chicago and deposited him with Dr. Dyer. After caring for him a little while, the good Doctor thought it advisable to give him a chance to see Canada-to reach Canaan at last-and placed him on board the steamer 'Illinois,' Captain Blake, with his gun and his knife. Captain Blake, as usual, when several days out, made a tour of discovery to see what he might find on board, and among the firemen he found a 'new hand,' at which discovery he was very wroth, and made awful threats in language more forcible than polite. However, his fury ended by the positive determination to 'kick him off the boat at the first port he came to.' So as he came into the Detroit River, he made a grand circuit, as if to show off his fine boat to a circle of admiring Southerners on board, and ran it into a port on the Canada shore, where he had no passengers to leave, but where he furiously dragged the negro from the lower regions and energetically 'kicked him off' into freedom."

Mr. Eastman gives the following as the last slavery

disturbance in Chicago:

"In 1845-46 a certain negro was arrested by Henry Rhines by virtue of a writ issuing from the office of Justice Lewis C. Kercheval, and brought before that Justice to answer to the charge of seeming to be free when he was not, and to respond to a claim of ownership by a man residing in Missouri. There was no master or agent in Chicago to look after the interests of this claim, but the negro was brought before the Justice to answer to the charge. It was soon noised abroad that Rhines had "got hold of another nigger, and had him in Kercheval's office." Dr. Dver, the stanch friend of the then oppressed race, with a score of black friends of the prisoner, and quite a number of "respectable" people besides, soon arrived at the office, where the Justice was engaged in making out the paper of "extradition," and Mr. Kercheval was coldly informed that that case was to be contested. Lawyer Collins was sent for, and as the rumor that "a nigger had been caught" spread abroad, great crowds of people gathered on the street and filled the Justice's office on the second floor of a wooden building on Clark Street. It was very evident there was to be a full trial. Mr. Collins critically examined all the papers that had been prepared in the case, as well as the evidence submitted to prove that this man was a slave of somebody in Missouri. He could find no flaw in Kercheval's decisions through which the man might escape, and suddenly sprung upon him this startling proposition: "This man is charged with being a slave in Missouri; now, I deny that slavery exists in Missouri." The Justice affirmed that the proposition was absurd; that everybody knew that slavery existed there. "I deny it," protested Mr. Collins, "and you can't take as evidence what everybody says; it must be proved before your honor. Your honor's court is of too high a grade to be taking evidence on hearsay." No one could be found who could testify "from personal knowledge" that slavery existed in Missouri. Mr. Collins claimed that it must therefore be proved by the law itself, and it struck the Justice that this was but reasonable and just, and in accordance with proper legal practice.

In the meantime the crowd was getting very dense in front of the building, blocking up Clark Street from Lake to Water, and the little office and stairway was so closely packed that there was great danger of breaking

down and being lost in one common muddle.

"It must be proved," says the Justice, and where is the "Stat-tuts of Wisconsin!" Now these "Stattuts" were not in the Justice's office; they were not commonly at hand. A messenger was sent for the "Statutes of Wisconsin." Rhines remained on hand to guard his prisoner. It was with great difficulty that the messenger squeezed his way down the office stairs and through the outside crowd on his mission to a neighboring law office to get the required authority, and there was therefore a long and solemn waiting for his return—an ominous pause in the process of administering justice. Suddenly, from his "durance vile," and from before the very presence of the Justice, uprose that "nigger," and somehow, like a bubble, glided over the heads of the throng and down the staircase to the sidewalk. The crowd moved on to follow, and Rhines, like "Jill,"

"came tumbling after." Reaching the sidewalk, he tried to get out his pistol, but the pressure of the crowd forced him to point it past his own nose up to the heavens-an unprofitable direction in which to shoot. The Justice, in the meantime, waited for the arrival of the "statutes," and could have seen-had he looked, as his constable was obliged to see, to his discomfiture, in his utter helplessness on the outside-an eager and excited crowd, a mingling of men, wagons, horses and drays, and in the midst of shouts the negro hoisted onto the highest seat of the best carriage on the street, while the spare room was filled with young men, and then driven by these daring young fellows down Lake Street to Lawyer Collins's office, while an immense crowd followed shouting and cheering the rescued and rescuers. Arriving at the office, the negro ascended to the second story, the young men took out a front window, and the former prisoner, standing upon the sill, thanked the crowd below for his rescue from those whose purpose it was to remand him to slavery.

No prosecutions followed or were even threatened for thus placing obstacles in the way of the distribution of law and justice, although the offenders, who had incurred the penalty of six months' imprisonment by this jolly performance, would have filled half a dozen jails like that of Chicago, and the officers of the law who designed to send this underground-fugitive back to slavery, had to digest their disappointment as best they

might

To Mayor Curtiss, and to many of the good citizens of Chicago, however, this "demonstration" looked somewhat, yea, "very like" a mob, and there was great fear lest the fair fame of Chicago as a "law abiding city" should be tarnished. As a consequence of this anxiety, a proclamation was issued, calling a meeting of law-and-order people of the city in the court-house. The law-and-order people (on both sides were on hand at the appointed time. Everything had been prepared. Resolutions had been prepared, and were about to be promulgated, that would forever squelch "abolitionism." Somehow, things did not work smoothly for the selfconstituted law-protectors, and when J. Young Scammon arose in the rear end of the court-room and proposed a set of resolutions that had been brooded over by another kind of men, great was the consternation. Through much disturbance he was at length permitted to read them. They deprecated all illegal interference with the law, and especially illegal arrests of people who had made Chicago an asylum from oppression, declaring that Chicago was on the side of humanity, and was bound to protect legally the fugitive from oppression. The resolutions were passed by an enthusiatic vote. This was the last slavery excitement under the Black Laws, and Chicago maintained thereafter her well-earned reputation as a law-and-order community.

The murder of Lovejoy at Alton, Ill., in 1837, seems to have been the first incident that aroused the apathetic people of Chicago sufficiently to result in anything like organization or public protest against the enormity of human slavery. Mr. Eastman in his article in Blanchard's History of the Northwest, gives the following account of Chicago's connection with the early

anti-slavery days:

"Soon after the murder of Lovejoy, there was a meeting called in Chicago—not to sympathize with the cause of abolitionism, but to condemn this assault on the constitutional right of the freedom of the press. It was called to be held in the Saloon Building, a small public hall on the corner of Clark and Lake streets, on the third floor, and the meeting was held not without

fears that it would be broken up by a mob. There was an abundance of caution used in the calling and holding of the meeting, to avoid any collision with the fellows of the baser sort.' Rev. F. Bascom, of the First Pres-byterian Church, Dr. C. V. Dyer, Philo Carpenter, Robert Freeman, Calvin DeWolf, and some few members of the Baptist and Methodist churches, were the leading spirits of this meeting. A watch was set to give seasonable warning of any approach of a mob, should any one be sent howling upon the track of these devout men, mourning for Lovejoy, and endeavoring to give voice to a right-minded public opinion. But there was happily no demonstration of mob violence, and the meeting was not a large one, but probably fully represented the interest which Chicago then took in the fate of Lovejov; the city was at least saved from the disgrace of a mob. It was not then presumed that an abolition press would have fared any better in Chicago than it had at Alton. The public were not prepared to tolerate any such newspapers.

"This was the first anti-slavery meeting, if it may be called such, held in Chicago, of which there is any recollection. The men who were present became prominent afterward in the anti-slavery history of Chicago. The men who were willing to be known as abolitionists, soon after this event, were mainly a nucleus that formed around the First Presbyterian church, embracing a few individuals who were Methodists or Baptists; but in almost every instance they were professing Christians, who were led to take a stand by the death of Lovejoy. Here was the beginning of that antislavery sentiment that became a power in Chicago, and made that city distinguished throughout the country as one that proved itself a law-abiding community by sheltering and protecting the fugitive slave against illegal arrest.

The date of this first meeting is not given; probably in  $\tau 838$ .

September 3, 1839, the Chicago Colonization Society was organized.

January 16, 1840, the Chicago Anti-Slavery Society held its first public meeting at the Saloon Building. The officers were: President, Henry Smith; vice-presidents, Ira Miltimore, George Foster, and J. Johnston; secretary, Calvin DeWolf; treasurer, George Manierre. Resolutions were officred, and, with slight amendments, adopted, by Rev. Isaac T. Hinton, Rev. Flavel Bascom and Charles Durant, favoring the adoption of some plan for the peaceable abolition of slavery throughout the world, and denouncing the "Black Code" of Illinois.

December 25, 1840, there was published in the Chicago American, a petition to the State Legislature, praying it to remove from the Illinois statutes those laws known collectively as the Black Code which prevented negroes from testifying against whites, and which permitted any white man to cause any black man to be thrown into jail who did not show his papers of

freedom.

The Liberty Party abolitionist held a State convention at Chicago, May 27, 1842, to nominate candidates for State officers: Governor, Lieutenant-Governor, etc. This was the *first State Convention* ever held in the city.

It does not appear that these early abolition efforts made any perceptible impression on the Democratic majority or the Whig minority until the issue took a national form. But the leaven worked fast. In 1844, when, for the first time the abolitionists had a national ticket in the field Chicago gave 209 votes for Birney, the presidential candidate. Out of a popular vote of

2,615,855. b....ey received only 62,263 votes. Of these, the State of Illinois gave 3,570, and the little city of Chicago 209. Numerically the vote was insignificant, but comparatively it stamped Chicago at that early day as a hot-hed of abolitionism, where lived an uncompromising and undismayed set of radicals, whose strength was not to be despised.

The anti-slavery sentiment of the city was still more plainly discernable in the presidential election of 1848, when the Democratic party divided on the issue. Then, the anti-slavery sentiment was expressed by a vote of

1,543 for Van Buren.

The anti-slavery Democrats were again whipped into the party traces in 1848, but the incorrigible anti-slavery sentiment in Chicago and Cook County asserted itself in a vote of 793 in the county and 424 in the city for Hall.

The succeeding four years brought the contest which had heretofore smouldered under the crust of party politics to an eruptional crisis. During the period from 1848 to 1852, the whole nation had become stirred to its utmost political depths by national legislation which made it patent to the Northern mind that the North were not longer to be neutral in the propagan-

dism of slavery in the Republic.

The passage of the fugitive-slave law, a part of the compromise measures of 1850, although accepted by both the old parties as a law to be observed and executed, met a most determined opposition thoughout the North, and, although there was no political party, save the little revolutionary knot of abolitionists opposed to the law, it could not be enforced in Chicago, nor in any other considerable city in the North, without a popular outbreak, which showed plainly that a conscientious sense of inherent right was becoming so potent that party discipline could no longer restrain it. There was great excitement in Chicago on the receipt of news that the fugitive slave bill had been passed. September 18, 1850.)

On October 11, the colored people, in convention resolved, "not to fly to Canada," but, "to remain and defend themselves." On the 21st, the Common Council a Democratic Council) passed a resolution that "the city police would not be required to aid in the recovery of slaves." On the 22d, a great mass-meeting of citizens was held, which, by resolutions condemned the law, and defied its enforcement in

Chicago.

Stephen A. Douglas had been a most ardent supporter of the compromise measures. He had become a resident of Chicago in 1847, and had, through his influence, made the city of his residence the terminus of the Illinois Central system of railroads, thus largely increasing its commercial prosperity and importance. His popularity in Chicago as a citizen and as a politician, was at this time at its height. His power over his home constituency was never shown in a stronger light than at this time. In October, 1850, he returned to Chicago, where he found, even among his political friends, the measures generally unpopular, and, in the Democratic papers, even, assailed with great bitterness. On the 24th of that month he made, in Chicago, what has been deemed the ablest speech of his life, in which he defended the principles of the compromise bill, including the fugitive-slave bill, in a manner so masterly as to silence, if it did not convince the insubordinate elements of his own party. In this speech he enunciated the doctrines on which he framed and defended the Kansas-Nebraska bill, three years later, in the following words:

"These measure are predicated on the great fundamental principle that every people ought to possess the right of framing and regulating their own internal concerns and domestic institutions in their own way.

\* \* \* These things are all confided by the Constitution to each State to decide for itself, and 1 know of no reason why the same principle should not be extended to the Territories."

Through the influence of Douglas, the Chicago Democracy was re-united and solidified for the last time, as is evinced in the vote of the city and Cook County in 1852, when the united Democracy gave Pierce, the Democratic candidate for President, a vote of two thousand eight hundred and thirty-five in the city, against four hundred and twenty-four for Hall the free-soil candidate.

Douglas's scepter was quite rudely broken before another national election. In 1854, January 30th, Douglas made his great speech in the United States Senate, championing the Kansas-Nebraska bill, which repudiated the compromises which had gone before, and, in the minds of the populace, showed the compromises of 1850, including the hated fugitive-slave law, to have been only designed as a subterfuge of the slave power to gain a foothold for further aggression. Douglas took no backward step. He came to Chicago, as before, to explain to his constituency the questions they did not understand. He found his power gone, and only a small but faithful minority of adherents left. The anti-slavery sentiment had broken all bounds, and could no longer be curbed, even by the eloquence of Douglas. An account of his discomfiture is copied from the Chicago Times, of Sunday, August 19, 1877, it being one of a series of historical articles under the head of "By-Gone Days" which appeared in that paper. Its statements show the extreme color of admiration for the hero of the story, but is, nevertheless, deemed to be essentially correct, and is therefore embodied in the history. It read as follows:

"No man of his time had so many personal friends and so many bitter political enemies as Stephen A. Douglas. The former regarded him almost in the light of a prophet, and under his banner would have undertaken any crusade it might have entered his head to preach. The latter in order to maintain an equilibrium, went quite to the other extreme, and regarded the inventor of squatter sovereignty in the light of a Judas or Beelzebub, devoid of a single pure motive.

"Impartial history has since taken the equation of the Little Giant's character and mental stature, and now declares that he was neither so great as his most enthusiastic friends believed him to be, nor so fickle and insincere as his enemies portrayed him. He was eminently a man of action; a man to exert a powerful influence on his own generation, but as he, by nature, favored compromise principles, had a tendency to trim -not by any means a bad trait in times of public excitement-it was to be expected that he would leave no particular influence behind him. Even the present generation, hearing the old heads talk with abiding interest about Douglas, wonder, when they read his speeches, full of one idea and rather tiring repetition, what there was great in the man to draw other men to him in such magnetic chains; and another generation, still further removed from personal knowledge and oral reminiscences of the man, will wonder even more. It was Douglas's fault that he was ambitious. It is his glory, that in the supreme moment of his life he had the greatness to sink his disappointment in the welfare of his country, and his chief title to greatness rests on the fact that he was able to conquer himself, and, with a heroic abnegation, place himself by the side of the man who had robbed him of the crown of his consuming ambition, to strengthen his arm in fighting his country's foes. The man who could do this was not small,—he was not without principle—and though it does not prove him a great man as to brains, it testifies most eloquently to his greatness of heart.

"Two causes led to the mobbing of the Little Giant in 1854. Those were Know-nothing days, and the Nebraska excitement—supplemented by the Kansas furore—was coming to a head. That it was a period of turmoil is little matter for wonder. In the one case it was a question between the native and the foreign born element—a question, in fact, whether the adopted citizen had any rights which a native was bound to respect. In the other case it was a struggle between freedom and slavery; a life-and-death, hand-to-hand struggle

surrender of Lee under the apple tree. On the Know-nothing question Douglas took noble and even advanced ground. In fact, he was the first to make war on the proscriptive spirit of the native party, and it was he who marshaled the Democratic party against the hosts of intolerance, fanatism, and political as well as religious bigotry.

then begun, and which came to an end only with the

"Prior to the throwing of these firebrands into the political establishment of the country, as between Whigs and Democrats, Chicago was strongly Demo-cratic—was a stronghold, in fact. By way of illustrating the Democratic strength of that period, an old settler made the remark: 'If the town pump had been nominated for mayor in those days, on the Democratic ticket, it would have been elected. A nomination was always equivalent to an election, and 1 remember once when Dr. Kimberly, lately deceased, got the Demo-cratic nomination for clerk of some sort, in the Democratic convention that was held in the little old courthouse that stood in the northeast corner of the square, he fainted dead away; he was so overpowered by it. You see the nomination gave him a sure thing, and a nomination and election coming that way in one fell swoop is calculated to knock over the strongest, as I happen to know, for I have run for office myself once or twice in my life.'

"But the Democratic party got on a terribly ragged edge in 1854. The Whigs went to pieces, but in their place came an indefinable something that was neither fish, flesh, nor fowl, for a time, and went under the name of 'Fusion.' Everybody 'fused' for a time, and 'thused' over it, but the thing didn't last long, and out of this chaos was born the Republican party.

"When Know-nothingism came, it completely paralized the Democratic party for a time, and the leaders were afraid to combat it. But Douglas, with his characteristic courage—or more properly speaking, pluck having been invited to deliver a 4th of July address at Philadelphia, accepted on condition that he be allowed to free his mind, and he did so accordingly. On the one hand he went rough-shod for the Know-nothings, and on the other he spoke with enthusiasm for his squatter sovereignty, and thus had the entire opposition about his ears. On the one hand this speech had the effect of placing the Democratic party in solid opposition to Know-nothingism; but what he had said about the Nebraska question so offended the free-soil element in the party that a goodly proportion sloughed off and joined the incoherency known as Fusionists. by this free-soil element that Douglas was most bitterly antagonized thereafter, and it was his former supporters

of this complexion that determined to make it warm

for him on his return to Chicago.

"There was at that time a daily paper in Chicago called the Democratic Press. It was edited by John L. Scripps and Hon. William Bross, the latter still surviv-This paper, once Democratic, turned with vindictive vehemence on the "Little Giant," and left no means untried to turn the populace against him. Just at that period the once powerful Democratic party of Chicago was actually scattered to the four winds, and not more than a corporal's guard of true souls could be found to give the little Senator a brave backing.

"But, backing or no backing, the 'Little Giant' determined to face the music, and it was announced that shortly after his arrival in Chicago, after the adjournment of Congress, he would take occasion to address his constituents on the issues of the day, and

mayhap make a few personal explanations.

"This was just what the opposition to Douglas dreaded. They knew they had him at an advantage so long as he was a thousand miles away; but face to face, with his persuasive tongue in motion, it was another matter, and they determined at all hazards to thwart his purpose-even though it was at the sacrifice of their own vaunted principle, free speech. before, in 1850, Douglas had passed under a cloud, but a single speech by him in explanation of his position had placed him in a greater favor than ever. It was this power his enemies dreaded, were determined to

nullify, and made arrangements accordingly.

"Congress adjourned about the 1st of August. Mr. Douglas left Washington soon after, and reached his home in this city on the 25th. When he arrived here he found a most formidable organization opposed to him, determined to crowd him to the wall at all hazards; and determined even that he should under no circumstances have an opportunity to address the people, as it was announced he was prepared to do. In this movement to oppose violence to free speech the clergy took a prominent part, and from numerous orthodox Protestant pulpits, especially of the Methodist and Baptist persuasion, the fiat went forth to the faithful that this anti-Christ must be denied every opportunity to pollute the pure atmosphere of Illinois with his perfidious breath. Not only was this organization and purpose manifest in Chicago, but it was rampant all over the State, and the Know-nothing and free-soil combination was at nearly every point prepared to contest with him the right to address the public, on the plea that he was a public enemy.

"It was on the evening of September 1, 1854, that he was announced to speak at North Market Hall, where now the county building stands. Dan O'Hara says there can be no mistake about the date, because it was his birthday, his thirty-third, and he celebrated it by attending the meeting as one of the "Little Giant's"

most ardent admirers.

" As soon as the date was announced earnest preparations began on both sides. On the one hand were incendiary appeals on the part of a reckless, partisan press, calling on the populace to 'thwart the little demagogue's' purpose, while on the other there went forward determined measures on the part of Mr. Douglas's friends to see fair play and give him muscular backing if need be. But this determination was not widespread throughout the party. It was principally confined to personal friends-but these tried and true friends.

" Just before the meeting all manner of reckless reports were given currency by the opposition press, one

being to the effect that Mr. Douglas had selected a body guard of five hundred Irishmen who, with arms in their hands, were to be present and compel the people to silence while he spoke. This story was spread to inflame the Know-nothing element. It is needless to say that it had no foundation in truth, and more's the pity. Such an organization at this time-an organization to maintain free speech-would have been a most creditable thing, and that some of the leaders of that mob were not shot down in their tracks will ever be matter for regret among all liberty-loving and all rightminded folks, even though the mob acted in the abused name of liberty. After the riot, with a view of keeping up the bad blood engendered, a paper declared that terrible times might be expected soon, as the friends of the 'Little Giant' had bought up all the guns and revolvers in the stores of the city, and had given heavy orders for more. All of which was another lie manufactured to suit a particular emergency.

"Judge I. L. Milliken was the Mayor of the period -a Democrat in those days-and he was invited and consented to preside at the meeting. The fact that violence was to take place at the gathering was daily impressed upon the public by the opposition press, but with consummate duplicity it was stated that it would be brought about by Douglas, who intended to overawe

all disapproval by armed opposition.

"Under such circumstances as these, assembled the meeting on that September evening. During the afternoon the flags of such shipping as was owned by the most bitter of the Fusionists were hung at half-mast; at dusk the bells of numerous churches tolled with all the doleful solemnity that might be supposed appropriate for some impending calamity. As the evening closed

in, crowds flocked to the place of meeting.

"The gathering was on Michigan Street, immediately in front of the old North Market Hall. A great crowd was assembled, and it was plain from the start that a wicked feeling was abroad. A little before 8 o'clock Mr. Douglas began to speak. And still the crowd increased. It completely filled up Michigan Street, east as far as Dearborn, and west as far as Clark. And, besides this, the roofs of opposite houses were covered, and the windows and balconies filled, for the 'Little Giant' had a way of making himself heard at a great distance.

"The Senator had spoken but a few minutes when it became apparent that there was an element present that was not disposed to hear him. On the questioning of some statement of the speaker by a person in the crowd the rumpus began in earnest, and for a matter of two hours a juvenile pandemonium sported at a white rage all around that Old Market Hall. First hisses were in order. The Senator paused until silence was comparatively restored, when he told the meeting that he came there to address his constituents, and he intended to be heard. He was instantly assailed by all manner of epithets. Every name that vile tongue could invent was hurled at him. In a moment he was surrounded by a howling, raging mob, hungry to do him personal injury. But, all undaunted, he fearlessly faced the enemy, at the same time keeping down a little company of friends on the platform, who were all eagerness to resent the insults and affronts so brutally heaped upon their idol. Mr. Douglas appealed to the latter to be calm; to leave him to deal with the mob before him. He boldly denounced the violence exhibited as a preconcerted thing, and in defiance of vells, groans, catcalls, and every insulting menace and threat, he read aloud, so that it was heard above the infernal din, a letter informing him that if he dared to speak he would be

maltreated.

"The Senator's biographer, Mr. Sheahan, alludes as follows to the affair: 'We never saw such a scene before, and hope never to see the like again. \* Until ten o'clock he stood firm and unyielding, bidding the mob defiance, and occasionally getting in a word or two upon the general subject. It was the penalty for his speech in Philadelphia. It was the penalty for having made the first assault upon Know-nothingism. It was the penalty for having dared to assail an order including within its members a vast majority of the allied opposition of the Western States. We have conversed since then with men who were present at that mob; with men who went there as members of the order, pledged to stand by and protect each other; with men who were armed to the teeth in anticipation of a scene of bloody violence, and they have assured us that nothing prevented bloodshed that night but the bold and defiant manner in which Douglas maintained his ground. Had he exhibited fear, he would not have commanded respect; had he been craven, and entreated, his party would in all probability have been assaulted with missiles, leading to violence in return. But, standing there before that vast mob, presenting a determined front and unyielding purpose, he extorted an involun-tary admiration from those of his enemies who had the courage to engage in a personal encounter; and that admiration, while it could not overcome the purpose of preventing his being heard, protected him from personal The motive, the great ruling reason, for refusing him the privilege of being heard, was that, as he had in 1850 carried the judgment of the people captive into an indorsement of the fugitive-slave law, so, if allowed to speak in 1854, he would at least rally all Democrats to his support by his defense of the Nebraska bill. The combined fanatics of Chicago feared the power and effect of his argument in the presence and hearing of the people. They therefore resolved that he should not be heard. So far as this occasion was concerned, the object was successfully attained, and if there were any doubts as to the fact that the course agreed upon had been previously concerted, the experience of the following few weeks served to remove all question on that head.'

"It was reported at the time, especially by and among those who were not present, that the 'Little Giant' was pelted with rotten eggs. This feature is now called in question by most trustworthy witnesses, who substitute rotten apples. Perhaps, as between rotten eggs and rotten apples, there is not much choice of flavor, but the Sunday Times historian agrees with Uncle Dan O'Hara that the veracity of history is above every other consideration, and he, having been one of the eve-witnesses aforesaid, falls in line on the rotten-

apple side of this controversy.

"It was a brave little band that stood by the side of the 'Little Giant' in that hour of peril, and but for his restraining influence, though but few in numbers, it is more than likely they would have left their mark upon the mob. Some have since gone where it is to be hoped mob spirit is unknown since the rebellion of Satan, but others are still among the living. Of this little band were Hon. Frank C. Sherman, General Hart L. Stewart, Cornelius and William Price, Tom Mackin, Elfhu Granger, Dan McElroy, Dan O'Hara, Colonel Dick 'Hamilton and Elisha Tracy.

"This band clung to the lion-hearted Senator to the last. For two hours they stood like a solid wall back of him, and when, after a vain and protracted effort to be heard, Mr. Douglas finally succumbed to the inevitable, and prepared to leave the rostrum, they formed a stanch phalanx about his carriage, and proceeded to march with their charge toward the hotel. Hooting and yelling, the mob followed up to Clark-street bridge. It was a fortunate circumstance that as soon as the Douglas party had got across the bridge-tender had sense enough to turn the bridge, and thus the greater part of the mob were unable to continue their pursuit. In time the Senator was safely ensconced in his hotel, the Tremont House.

"A month or two later Mr. Douglas was invited by his political friends in this city to partake of a public dinner, and he accepted the invitation. The 9th of November was selected for the time, and on that evening some two hundred gentlemen sat down to a dinner at the Tremont House. In response to a complimentary sentiment, Mr. Douglas addressed the company in a speech which was substantially the address which he would have made to the people in September, had he

not been prevented by the mob.

"After the mob violence encountered in Chicago. Mr. Douglas announced his intention to speak at several points in the State, there being an election for Congressmen and State Treasurer then pending. Everywhere throughout the northern part of the State he was greeted upon his arrival by every possible indignity that could be offered, short of personal violence. Burning effigies, effigies suspended by ropes, banners with all the vulgar mottoes and inscriptions that passion and prejudice could suggest, were displayed at various points. Wherever he attempted to speak, the noisy demonstrations which had proved so successful in Chicago were attempted, but in no place did they succeed in preventing his being heard. At Galena, Freeport, Waukegan, Woodstock, and other points in the very heart of the abolition and Know-nothing portion of the State, he bearded the lion in his den, and soon rode on the topmost wave of public favor once more.

Later, when Douglas in the highest magnificence of his intellectual stature, rose up in indignant and uncompromising protest against the enormities that had grown out of his Kansas bill, and, apostatizing from his former apostasy, again stood for freedom, he came again to be the idol of the city, which now holds his sacred dust, and mourns his untimely death at a time when it seemed that the fires of true patriotism were just breaking in

a white heat from his great soul.

From the date of Douglas's rebuff, Chicago never ceased to be on the extreme verge of anti-slavery excitement, and became the center of the Western movement which resulted in making Kansas a free State.

May 31, 1856, that most wonderful combination of everything good and bad which has ever been put in human form—James H. Lane, of Kansas—addressed the whole city in Court Square. His address was the culmination of the anti-slavery sentiment which then broke out in deeds,

An echo comes from Kansas of those early times. In the history of that State published in 1883, is an account of what Chicago did for the struggling settlers of that State in their extreme distress. The account is as follows:

One of the earliest and most enthusiastic Kansas meetings held was at Chicago, Saturday evening, May 31, in court-house square. The Kansas speakers were Colonel James H. Lane and Mr. Hinman, "fresh from the smoking ruins of Lawrence." The Chicago Daily Tribune, June 2, gave a two-column report of the meet-

ing under such head-lines, as these: "Illinois Alive and Awake!" "Ten Thousand Freemen in Council!"
"Two Thousand Old Hunkers on Hand!" "Fifteen

Thousand Dollars Subscribed for Kansas!!!"

Hon, Norman Judd presided, and made the opening speech. He was followed by Francis A. Hoffman. I. C. Vaughn, in an eloquent speech, presented the claims of Kansas for immediate relief, and offered the following resolutions:

"Resolved, That the people of Illinois will aid the freedom of

"Resolved. That they will send a colony of five hundred actual settlers to that Territory, and provision them for one year.\* "Resolved, That these settlers will invade no man's rights, but

will maintain their own.

"Resolved. That we recommend the adoption of a similar policy to the people of all of the States of the Union, ready and willing to aid; and also, a thorough concert and co-operation among them, through committees of correspondence, on this

\*\*Resolved, That an executive committee of seven, viz., J. C. Vaughn, Mark Skinner, George W. Dole, I. N. Arnold, N. B. Judd and E. I. Tinkham, be appointed with full powers to carry

into execution these resolutions.

"Resolved, That Tuthill King, R. M. Hough, C. B. Waite, J. H. Dunham, Dr. Gibbs, J. T. Ryerson and W. B. Egan be a finance committee to raise and distribute material aid."

Following the reading of the resolutions, they were seconded by Peter Page, and passed amidst the most

enthusiastic and prolonged cheering.

Next Hon. W. B. Egan, one of the most eloquent Irish orators of the city, spoke to his Irish fellow-citizens, rousing them to the highest pitch of excitement.

The president then introduced Colonel James M. Lane, of Kansas. As he rose up and came forward, he was greeted with an outburst of applause from the crowd that continued for some minutes, during which time he stood statue-like, with mouth firm set, gazing with those wondrous eyes down into the very heart of the excited throng. Before the applause had subsided sufficiently for his voice to be heard, the fascinating spell of his presence had already seized upon the whole vast audience, and for the next hour he controlled its every emotion-moving to tears, to anger, to laughter, to scorn, to the wildest enthusiasm, at his will. No man of his time possessed such magnetic power over a vast miscellaneous assembly of men as he. With two possible exceptions Patrick Henry and S. S. Prentiss), no American orator ever equaled him in effective stump-speaking, or in the irresistible power by which he held his audiences in absolute control. On that night he was at his best. It was doubtless the ablest and most effective oratorical effort of his life. No full report of it was given at the time. One of the hundreds of young men made Kansas-crazy by the speech, and who forthwith left all and followed him to Kansas, thus wrote of it twenty years after:†

"He was fresh from the scenes of dispute in the belligerent Territory. He made a characteristic speech, teeming with invective extravagance, impetuosity, denunciation, and eloquence. The grass on the prairie is swayed no more easily by the winds than was this vast assemblage by the utterances of this speaker. They saw the contenting factions in the Territory through his glasses. The Pro-slavery party appeared like demons and assassins; the Free-state party like heroes and martyrs. He infused them with his warlike spirit and enthusiastic ardor for the practical champions of the freedom. Their response to his appeals for succor for the struggling freemen was immediate and decisive.'

It is doubtful if the writer of the above, or any other of the ten thousand hearers of that night, can recall a single sentence of his speech. The emotions aroused were so overwhelming as to entirely obliterate from memory the spoken words. A few broken extracts are

preserved below. He began:

"I have been sent by the people of Kansas to plead their cause before the people of the North. Most persons have a very erroneous idea of the people of Kansas. They think they are mostly from Massachusetts. They are really more than nine-tenths from the Northwestern States. There are more men from Ohio, Illinois and Indiana than from all New England and New York combined."

Speaking of the President, he said:

"Of Franklin Pierce I have a right to talk as I please, having made more than one hundred speeches advocating his election, and having also, as one of the electors of Indiana, cast the electoral vote of that State for him. Frank was, in part, the creature of my own hands; and a pretty job they made of it. The one preeminent wish of mine now is that Frank may be hurled from the White House; and that the nine memorials sent him from the outraged citizens of Kansas detailing their wrongs, may be dragged out of his iron box.'

Of the climate of Kansas, he said:

"Kansas is the Italy of America. The corn and the vine grow there so gloriously that they seem to be glad and to thank the farmers for planting them. It is a climate like that of Illinois, but milder. Invalids, instead of going to Italy, when the country became known, would go to Kansas, to gather new life beneath its fair sky and balmy airs. The wild grapes of Kansas are as large and luscious as those that grow in the vinevards of Southern France."

He alluded to Colonel W. H. Bissell, then the Republican candidate for Governor of Illinois, as follows:

"It is true I was side by side with your gallant and noble Bissell at Buena Vista and in Congress. I wish I could describe to you the scene on the morning preceding that glorious battle. On a ridge stood Clay, Bissell, McKee, Hardin and myself. Before us were twenty thousand armed enemies. It was a beautiful morning, and the sun shone bright upon the polished lances and muskets of the enemy, and their banners waved proudly in the breeze. In our rear the lofty mountains reached skyward, and their bases swarmed with enemies ready to rob the dead and murder the wounded when the battle was over. Around us stood five ragged regiments of volunteers, two from Illinois, two from Indiana, and one from Kentucky; they were bone of your bone, blood of your blood, and it was only when you were near enough to look into their eyes that you could see the d--- was in them. It did not then occur to them that I should be indicted for treason because I loved liberty better than slavery."

He then gave a warm and glowing tribute to Colonel

Bissell, his brother-in-arms.

Then followed a most vivid and awful narrative of the outrages perpetrated upon the free-State men by the Missouri ruffians; so vivid that the Ossawatomie murders seemed but merited retaliation, and most sweet revenge to his excited hearers.

<sup>&</sup>quot;The plan here adopted of sending in emigrants, provisioned for one year, as well as that subsequently adopted of arming them for self-defense, did out originate at this meeting. It was a Southero idea, first conceived early in March, by Major Buford, of South Carolina, adopted by most Southern Emigrant Aid societies in the South, and practically carried out before a company was ever raised, provisioned or armed by any Northero organization. Early in April, Buford "regiment," as it was called, was in Knosss. Other parties, armed and "provisioned for a year" (nominally so—the promises were not full-filled) came for the southern States. More configuratived from the South, armed and Promised "provision for a year," un the worm allegiance to the slave powers.

† Colonel S, S. Pronty.

"The Missourians [said he] poured over the border in thousands, with bowie knives in their boots, their belts bristling with revolvers, their guns upon their shoulders, and three gallons of whisky per vote in their wagons. When asked where they came from their reply was, 'From Missouri;' when asked, 'What are you here for?' their reply was, 'Come to vote.' If any one should go there and attempt to deny these things, or apologize for them, the Missourians would spit upon him. They claim to own Kansas, to have a right to vote there and to make its laws, and to say what its institutions shall be."

Colonel Lane held up the volume of the statutes of Kansas; then proceeded to read from it, commenting

as he read:

"The Legislature first passed acts virtually repealing the larger portion of the Constitution of the United States, and then repealed, as coolly as one would take a chew of tobacco, provisions of the Kansas-Nebraska bill. Of this bill I have a right to speak—God forgive me for so enormous and dreadful a political sin—I voted for the bill. I thought the people were to have the right to form their own institutions, and went to Kansas to organize the Democratic party there, and make the State Democratic, but the Missouri invaders poured in—the ballot boxes were desecrated—the bogus Legislature was elected by armed mobs—you know the rest.

"The pro-slavery fragment of the Democratic party talk much about Know-nothingism. It is their song day and night. Well, these Kansas law-makers have gone to work and repealed at once the clause in the Nebraska bill that gave the right to foreigners to vote in Kansas on declaring their intention to become citizens, and made it requisite for them to have lived in the Territory five years, and to take the final oath; and at the same time they made all Indians who adopted the habits of white men voters at once. And what was the distinguishing habit of white men? Why, it was understood to be drinking whisky. All that was necessary to naturalize a Kansas Indian was to get him drunk. What Knownothing lodge ever went so far in their nativism as this? -made foreigners in the Territory wait five years to become citizens, and enfranchised the drunken, thieving Indians at once, one and all!

"The pro-slavery fragment of the Democratic party also delights in the term nigger-worshiper,' to designate Free-state men. I will show you that these Proslavery men are, of all nigger-worshipers, the most abject. According to the Kansas code [Colonel Lane read from the book, giving page and section], if a person kidnaps a white child the utmost penalty is six months in jail—if a nigger baby, the penalty is death. Who worships niggers, and slave nigger babies at that? To kidnap a white child into slavery—six months in jail—to kidnap a nigger into freedom—death!"

He concluded his scathing review of the infamous

code as follows:

"Is there an Illinoisan who says enforce these monstrous iniquities called laws? Show me the man! The people of Kansas never will obey them. They are being butchered, and one and all will die first! As for myself, I am going back to Kansas, where there is an indictment pending against me for high treason. Were the rope about my neck, I would say that as to the Kansas code it shall not be enforced—never!—NEVER!"

Following, he argued, elaborately and conclusively, the right of Kansas to come into the Union as a free State "now." He closed his speech with a detailed account of the murders and outrages perpetrated upon the free-State settlers, given with a masterly power of

tragic delineation which brought each particular hortor, blood-red and distinct, before the eyes of the excited throng. He knew of fourteen cases of tar and feathering—"the most awful and humiliating outrage ever inflicted on man." He told of Dow, shot dead while holding up his hands as a sign of his defenselessness; lying, like a dead dog, in the road all the long day, until in the evening his friends found his body, dabbled in his life blood, and bore it away; Barber, unarmed, shot on the highway, brought dead to Lawrence, where his frantic wife, a childless widow, 'mid shrieks of anguish, kissed the pallid lips that to her were silent evermore; Brown, stabbed, pounded, hacked with a hatchet, bleeding and dying, kicked into the presence of his wife, where in agony he breathed out his life—she, now a maniac."

A voice from the crowd called, "Who was Brown?" Lane continued:

"Brown was as gallant a spirit as ever went to his God! And a Democrat at that—not one of the Proslavery fragment, though. For the blood of free men shed on the soil of Kansas—for the blood now flowing in the streets of Lawrence—for every drop which has been shed since the people asked to be admitted as a State, the Administration is responsible. Before God and this people I arraign Frank Pierce as a murderer!

"In conclusion I have only this to say: The people of Kansas have undying faith in the justice of their cause—in the eternal life of the truths maintained—and they ask the people of Illinois to do for them that

which seems to them just."

The Chicago Tribune, in its report of the meeting,

June 2, says:

"We regret we can only give a meager outline of the eloquent and telling effort of Colonel Lane. He was listened to with the deepest interest and attention by the vast throng, and as he detailed the series of infamous outrages inflicted upon the freemen of Kansas, the people were breathless with mortification and anger, or wild with enthusiasm to avenge those wrongs. During Colonel Lane's address, he was often interrupted by the wildest applause, or by deep groans for Pierce, Douglas, Atchison, and the dough-faces and ruffians who had oppressed Kansas; and by cheers for Sumner, Robinson, and other noble men, who have dared and suffered for liberty. \* \* \* Language is inadequate to give the reader a conception of the effect of the recital of that tale of woe which men from Kansas had to tell; the flashing eyes, the rigid muscles, and the frowning brows told a story to the looker-on that types cannot repeat. From the fact that the immense crowd kept their feet from eight till twelve o'clock, that even then they were unwilling the speakers should cease, or that the contributions should stop; from the fact that workingmen, who have only the wages of the day for the purchase of the day's bread, emptied the contents of their pockets into the general fund; that sailors threw in their earnings; that widows sent up their savings; that boys contributed their pence; that those who had no money gave what they had to spare; that those who had nothing to give offered to go as settlers and do their duty to Freedom on that now consecrated soil; that every bold declaration for liberty, every allusion to the Revolution of 1776, and to the possibility that the battles of that period were to be fought over again in Kansas, were received as those things most to be desired-something of the tone and temper of the meeting may be imagined. \* \* \* The effect of the meeting will be felt in deeds. Be the consequences what they may, the men of Illinois are resolved to act.

\* \* \* Take it with its attending circumstances—the shortness of the notice, the character of the assembled multitude, and the work which was accomplished—it was the most remarkable meeting ever held in the State, We believe it will inaugurate a new era in Illinois. We believe it is the precursor of the liberation of Kansas from the hand of the oppressor, and of an all-pervading political revolution at home.

"About half-past twelve, Sunday having come, the meeting unwilling adjourned, and the crowd reluctantly went home. At a later hour, the Star Spangled Banner and the Marseillaise, sung by bands of men whose hearts were full of the spirit or these magnificent hymns, were the only evidences of the event that we have en-

deavored to describe."

The subscriptions in money, given by upward of two hundred different persons and firms, in sums ranging in amount from \$500 down to ten cents—the latter sum being given by a boy, all he had—amounted to over \$15,000. In addition were given the following utensils and supplies, for the use and comfort of the emigrants. The names of the donors and explanatory notes are given, as reported:

F. R. Gardiner, six rifles, three with double barrels,

sure at each pop.

Major Van Horn, one sixteen shooter.

C. W. Davenport, one six-shooter, and ten pounds of balls.

An editor and a lawyer, four Sharpe's rifles and themselves.

D. G. Park, one can of dry powder.

C. H. Whitney, one revolver. J. M. Isaacks, one Sharpe's rifle.

G. M. Jerome, Iowa City, one rifle.

A. S. Clarke, one Sharpe's rifle.

J. A. Barney, one rifle, H. A. Blakesley, one rifle.

W. H. Clark, one double-barreled rifle and \$10.

J. A. Graves, one Sharpe's rifle.

Frank Hanson, one double-barreled gun and \$25. A German, one pair of pistols.

I. H. Hughes, one Colt's revolver.

F. M. Chapman, one horse.

Urhlaub & Sattler, three revolvers.

This meeting, although not the first of a like character held in the Northwest during that spring, was remarkable as being the first great outburst of enthusiasm, which, breaking local bounds, spread to every town and hamlet from the Mississippi to the Atlantic coast. It was the "little cloud no larger than a man's hand" which forthwith spread over the whole heavens, and out of it came money, and arms, and ammunition, and a ceaseless tide of emigrants and troops of armed men—all setting Kansasward. Out of it came "Lane's Army of the North," in the imagination of the frightened pro-slavery Kansans and Missourians, "a mighty host, terrible with banners," coming, in uncertain but irresistible force, by a route indefinitely defined as from the North, to sweep as with the besom of destruction, the Territory clean of the Territorial laws, and every man who had advocated their enforcement. The army proved neither so numerous in numbers nor so terrible in its vengeful visitations on the pro-slavery settlers, as to justify their fearful apprehensions; nevertheless, its heralded approach inspired the free-State settlers with renewed courage, opened a new path of immigration into the Territory, and proved one of the many great moral forces which brought victory and peace at last.

The exciting campaigns of 1858-60 will furnish a fit beginning, in the succeeding volume, to the exciting

period of the Rebellion, and the succeeding years of peace, during which the Republican party held undisputed sway in Chicago, and throughout the Nation.

## LOCAL POLITICS.

At the municipal elections, party lines were not always strictly drawn. Through the long uninterrupted predominence of the Democratic party, several Whig mayors were elected, and, in one case a Know-nothing, much to the surprise of both parties. Below is given the names and political affiliations of the mayors of Chicago, from 1857 to 1858:

1837, William B. Ogden, Democrat.

1838, Buckner S. Morris, Whig. 1839, Benjamin W. Raymond, Whig

1840, Alexander Loyd, Democrat. 1841, Francis C. Sherman, Democrat.

1842, Benjamin W. Raymond, Democrat. 1843, Augustus Garrett, Democrat.

1844, Augustus Garrett, Democrat.

1844, Alson S. Sherman. 3

1845, Augustus Garrett, Democrat.

1846, John P. Chapin, Whig. 1847, James Curtiss, Democrat.

1848, James H. Woodworth, Democrat.

1849, James H. Woodworth, Democrat.

1850, James Curtiss, Democrat.

1851, Walter S. Gurnee, Democrat. 1852, Walter S. Gurnee, Democrat.

1853, Charles M. Gray, Democrat. 1854, Isaac L. Milliken, Democrat.

1855, Dr. Levi D. Boone, formerly a Democrat, elected on the Know-nothing ticket.

1856, Thomas Dyer, Democrat.

1857. John Wentworth, Republican-Fusionist (so styled, received five thousand nine hundred and thirtythree votes, against four thousand one hundred and thirty-two votes cast for Carver.

There were few local excitements of sufficient importance to be historic. In 1840 the papers noted at the general election, great excitement and many arrests

-no bloodshed.

The most notable local political disturbance occurred during the administration of Mayor Boone, the successful Know-nothing candidate. High license for saloons came in that year to intensify the local excitement.

Under the peculiar stress brought upon Dr. Boone and his administration, through the prejudice of foreign voters, and the high license law that was started at that time, he found himself confronted by a mob quite early in his administration. The story was told years after in the Chicago Times, August 5, 1877, as quoted below:

"The riot occurred in 1855, nearly the middle period between the beginning and now. Chronologically it is the great 'divide,' at least for the present, but by and by time will lengthen the hither end out of all proportion, and when the last old settler departs, who

" Was there all the while At the battle of the Nile,"

this now-famous time would live only in history. But hold! not even there, unless the Sunday Times rescues it from oblivion, which it now proposes doing.

"The records of that affair are now only to be found in the memories of participants. All other data were destroyed by the great fire. By and by these participants will all have disappeared, and then what is left will

<sup>\*</sup> The first numicipal election was declared invalid, one of the judges never having been naturalized. At the second election Sherman was declared elected.

be merely, 'What I used to hear my father tell about that affair'—exceedingly unreliable stuff, after passing through one, and, perhaps, even two defective memories.

" Just now reminiscenses of that old time ruction, in view of the new, still partly on hand, cannot fail to be read with interest, and it is important that the data should now be gathered while the leading participants are still with unimpaired memories among the living. Dr. L. D. Boone was the Mayor of that period. 'In Mayor Boone's time' is a remark very common among old settlers. It was one of the hottest and most unreasoning political periods in the history of the country, Passion ran high on all sides. The temperance question was alive; the Catholic question almost precipitated a religious war, and Know-nothingism hung on the outer wall a banner inscribed, 'Put none but Americans on guard.' Each one of these questions was well calculated to rouse the very worst passions, and under this stimulus sprang up a generation of b'hoys that, until the war of the Rebellion, were the terror of all large American cities.

"Venerable Dr. Boone, who now in his mellow old age enjoys a glass of beer when mixed with Thomas's orchestra music, as well as the next man, was the Knownothing or American party candidate for mayor, and was elected. This event took place in March, 1855. During the preceding winter the Legislature had passed a stringent temperance law, to be submitted to the people for ratification or rejection. Mayor Boone believed-and for this he had apparently the best of reason-that the act would be ratified by a large majority, and appreciating that an abrupt passage from unlimited beer to no beer would be a trial that no wellregulated Teuton could undergo with equanimity, he determined, as a measure for the good of the community to smooth the way by degrees, and thus effect the transition by such easy stages that, metaphorically speaking, the Nord Seite would pass the Rubicon with no more discomfort than it now experiences in crossing the river by way of the LaSalle-street tunnel.

"The historian for the Sunday Times had the pleasure of an interview with Dr. Boone during the past week, in which the ex-Mayor took occasion to remark that his actions at that time were considerably misunderstood, and were still misunderstood, as he had never taken occasion to correct false impressions. The Doctor then stated what has been mentioned, that he believed the temperance law was again to become a fact and what he did he did conscientiously, as he believed, for the good of the whole community, and not on

fanatical grounds.

"What he did do was, as soon as he was inducted into the office of Mayor, to recommend to the Council that the license fee be raised from \$50 per annum, to the rate of \$300 per annum, but that no license be issued for a longer period than three months. This he believed to be a wise measure of precaution, since it would root out all the lower class of dives, and leave the business in the hands of the better class of saloonkeepers, who, when the temperance law should go into force, could be rationally dealt with. But the saloon element failed to see this measure by the same candle that Mayor Boone saw it. They regarded the ordinance in the light of oppression and nothing else, and banded together to defeat its object. The city government at this time was completely in the hands of the Native American party, and the Mayor and the Council had no fear of defeat, the more so as the adage, 'to the victor belongs the spoils,' had been so sytematically carried

out that every man of the eighty or ninety patrolnien on the force was a native American.

"As soon as the ordinance was passed resistance was agitated. The Nord Seite was in a state of ferment. It was argued, and not without some show of truth, that the boasted equal rights guaranteed by the constitution was a cheat and a fraud, and that if foreigners did not then and there die in the last ditch in behalf of their liberties, there would soon be instituted for the white alien a system of slavery as abject as the negro's servitude on the Southern plantation.

"One need not go over the whole ground to know what was said at that time. The imaginative orator was there, as he is everywhere, and if he failed in his duty it was not for want of a fruitful theme. But he he did not fail, and he fired the Teuton heart to a point where it was literally self-consuming, and other hearts—a la Beecher—such as beat in Irish and Scandinavian bosoms ached in earnest sympathy, though the demonstrations that ensued were principally of Teutonic origin.

"At the period that this stringent and almost prohibitory license ordinance was sought to be enforced, there was also among the municipal regulations a Sunday law, and this dead letter was sought to have the breath of life blown into it at the same time. Accordingly the persecution was of a two-fold character, and the Teuton's cup of bitterness literally overflowed. He determined to rebel. He did rebel. But the revolt

was short-lived. Clubs proved trumps.

"Mayor Boone had been running the municipal machine but a few weeks when in the neighborhood of two hundred saloon-keepers were arrested, and some of them ' jugged,' and others held to bail for trial on the charge. either for selling liquor without a license or for violation of the Sunday ordinance. When the saloon interest was attacked, the victims made common cause, and one attorney represented the entire batch. Between this attorney and the City Attorney it was agreed to try a sample case, and let the rest take the course set by that precedent. This case was called on the 21st of April. Squire Henry L. Rucker-a street was named in his honor-was the Police Magistrate of that period, and his court-room was in the court-house proper. About 10 o'clock, a few moments after the case had been called up for trial, at remendous commotion ensued in and about the court-house. The saloon interest had massed itself in a solid body on the North Side, especially the two hundred under bonds, and having secured a fife and drum, they proceeded to make a forced march on the court-house. With a tremendous racket they entered the sacred precincts of justice. The fife screeched, the drum rattled, beery throats uttered gutteral and unintelligible oaths, and there was the deuce to pay generally. This mob was bent on intimidation. Having, as they supposed, exercised a certain amount of 'moral' influence on the court, the mob gathered in force at the intersection of Randolph and Clark streets, and literally obstructed both thoroughfares opposite the Sherman House, C. P. Bradley was Chief of Police at that time, and Darius Knights, now at the head of the sewage department of the city, was the Marshal. Both were men of force and not to be trifled with. Luther Nichols-who came with General Scott in 1832, has been a resident of Chicago ever since, and is now the oldest continuous resident in the citywas the captain of police. When the mob had completely blocked the before-mentioned thoroughfares, Captain Nichols hurried to Mayor Boone for orders. What

shall I do?' queried he. 'Clear the streets and disperse the mob,' was Mayor Boone's answer, and the order was obeyed without any serious consequences. Several who made efforts at resistance were arrested. All this happened in the forenoon. The mob having dispersed, quiet reigned 'down town,' but it was one of those calms that precede a storm. Both sides were getting ready for a desperate struggle. While the saloon interest on the North Side were marshaling its forces, for the declared object of rescuing the prisoners in the hands of the officers, Mayor Boone was energetically strengthening his position by swearing into service an extra force of one hundred and fifty policemen, thus placing an effective force of nearly two hundred and fifty men at his command.

"About three o'clock the mob was sufficiently organized to proceed, and accordingly made its way along North Clark Street to the bridge. A part got across, but a considerable portion was cut off by a strategic movement on the part of the bridge-tender. It appears that the rioters became somewhat separated, one part preceded the other a short distance, and as soon as the first batch was across, the tender swung his bridge

to an open.

"Then a curious parley ensued. The Teutons raved and swore, and threatened to shoot, while the bridge-tender yelled back that he was acting under orders from the Mayor, and that he could not accommodate his fellow-citizens with a passage until the mayoral order was countermanded. The Mayor was communicated with, and finally word was sent to turn the bridge. Then the mob swarmed across, only to meet a solid phalanx of police. The reason Mayor Boone consented to the turning of the bridge was that he felt confident that his arrangements were equal to any emergency, and so they proved.

"Without much ado the mob and the peelers came into collision. The leaders of the mob cried, 'Pick out the stars!' 'Shoot the police!' Immediately a brisk fire was opened, and for a short time things were exceedingly lively round about the Sherman House. Quite a number of rioters were seriously wounded, but so far as can be definitely ascertained, only one was killed, though a few days later there were several mysterious funerals on the North Side, and it was generally believed that the rioters gave certain victims secret burial, the regulation with reference to permits

not being quite as strict then as now.

"A stalwart Teuton leveled a double-barreled shotgun at Officer Hunt, and blew off his left arm. The action was observed by Sheriff Andrews, who directed a young man named Frazer, standing by his side, to return the fire. He did so, and brought down his man. So far as known this was the single fatality of the day. Subsequently those in sympathy with the rioters had Frazer arrested, but the Sheriff put a quietus on that effort by averring that the shot was fired at his express order. Officer Hunt is still a member of the police force. He is at present detailed for special duty in connection with the Comptroller's office, and attends to show-licenses and other matters of that sort. At Mayor Boone's suggestion the City Council voted him the snug sum of \$3,000, and he still, after a lapse of twentytwo years, has that amount on interest, with Dr. Boone as his financial agent.

"The riot was ostensibly set on foot to release certain compatriots from jail. But it turned out to have a contrary effect, and instead of releasing any it added sixty to the number already 'jugged.' The event of the day created intense excitement throughout the

city, and as an aid to the police the military were called out, the said military consisting of an Irish company known as Montgomery Guards-relics of which were maintained up to quite a late period; an American company known as the Chicago Light Guards, a dragoon company, and a battery of two guns under command of the then prominent banker, R. K. Swift. The latter is said to have cut rather a bad figure during the trouble. He responded with his two guns, but was at a loss what to do. Mayor Boone requested him to protect the courthouse with his artillery, but the financial shootist claimed that it could not be done, since he could at the most protect but two sides at the same time. His honor, therefore, drew for him a little diagram, demonstrating that by placing one gun at the corner of La Salle and Washington streets, and the other at the corner of Randolph and Clark, he would be able to command all the approaches to the square. As soon as Swift became aware that the thing was practicable, he washed his hands of the whole affair, and left the guns in charge of his lieutenant, who was really an able officer, and would have thoroughly demonstrated the practicability of the Mayor's views, had the mob given him an opportunity. But the mob kept quiet thereafter. The one dose, well and quickly applied, was all-sufficient. Bad blood was rampant in those days, and street broils were exceedingly common. But Mayor Boone, being a man of nerve and decision, took the riotous bull by the horns, the moment he made his appearance, and knocked the brute insensible at the first blow.

"It was fortunate for Chicago at that trying period that the government was in excellent hands. For putting down a mob few could compare with C. P. Bradley and Darius Knights, men of the stanchest

erve.''

Following are personal sketches of the mayors who served the city up to 1858, from the inauguration of

city government in 1837:

WILLIAM B. OGDEN.—It has been the good fortune of Chicago to have possessed from the beginning a large number of public spirited citizens, and it is to them in greater measure than is often accorded, that the prosperity of the city is due. Early perceiving its great natural advantages, they supplemented those with the splendid enterprises and works that have made Chicago what it is. In the history of the progress and development of the city, the names of these honored citizens must always hold a foremost place, and chief among them stands the name of William B. Ogden. For nearly half a century, his time, his thought, his wise foresight and his prudent counsel were all given, and cheerfully given, to the building up and development of the great city, which he early saw would be the gateway and exchange of the Northwest. The mere enumeration of the great works and enterprises in which he was engaged, the most of which his mind conceived and his hand executed is enough to daze the ordinary mind. He advocated and helped to construct the Illinois & Michigan Canal. He built the first railroad that entered the city. He projected and constructed thousands of miles of that railway system which pours into the lap of Chicago the wealth and commerce of more than ten States. He possessed in a wonderful degree the American characteristics of hopefulness and self-reliance. Coming to Chicago when still a young man, while as yet the Indian paddled his canoe on Lake Michigan, or chased the deer over the prairies, and the nightly howling of wolves disturbed the repose of Chicago's first settlers, his prescient mind took in the future development of the great Northwest. When he first stood upon the shore of

Lake Michigan, there were scarce five thousand persons between that shore and the Pacific, and he lived to see it teeming with a population of ten million souls. He was a born leader of men. It has been said of General Jackson, that if he was thrown with a number of men and any emergency should arise requiring a commander that all would instinctively turn to him and obey him. Mr. Ogden possessed the same characteristic and was regarded in the same way. He was the first Mayor of Chicago;\* the first president of Rush Medical College; the president of the Chicago & Galena Union Railroad; of the National Pacific Railroad Convention held in Philadelphia in 1850; of the Illinois & Wisconsin Railroad Company; of the Buffalo & Mississippi Railroad Company; of the Chicago Branch of the State Bank of Illinois; of the board of sewerage commissioners of the city of Chicago; of the board of trustees of the University of Chicago; and he was the first president of the Union Pacific Railroad Company. Nor was he a mere figure-head in these great enterprises, but to all of them he contributed his time, his thought, his active exertion and his money. He foresaw the vast importance and

11.13. Ogden

value of the reaping machine to the Western prairies; and was early engaged in introducing it into extensive use throughout the West. He became interested with Mr. McCormick in the first large factory for their manufacture, and it was at Mr. Ogden's suggestion that the reaper was sent to England in 1851, which took the prize at the London Exhibition. He was a man of commanding presence, and cast in a mold of generous

\* For sketch of Buckner S. Morris, second Mayor of Chicago, see "Bench and Bar."

nobility. All whom he met accorded him at once their respect and confidence. In his commerce with mankind, whether with the high or the humble, he was always a courteous gentleman. He was the contemporary of, and lived on terms of intimacy with, some of the greatest men our country has produced, and though his life was mainly devoted to business, in comprehensive grasp of mind, in nobility of character, in all that goes to make the perfect citizen and the useful man, he was the peer of all. He was born on the 15th of June, 1805, in the town of Walton, Delaware Co., N. Y. His grandfather had been an officer in the Revolutionary War. and belonged to the Ogden family of Eastern New Jersey. Some time after the war he removed with a small colony of other officers and their families to the wild and picturesque region of Delaware County. Here a settlement was formed in the unbroken forest, and though the homes were rude, they were characterized by culture and a genuine hospitality. Amid such surroundings William was born and the first years of his life passed. He was born a pioneer, and he possessed the spirit of adventure and enterprise that belongs to the pioneer. Fond of athletic sports, he early became an adept with the rifle, and his boyhood was spent in learning the mysteries of wood-craft. Nor did he lose his natural taste for books and intellectual pursuits. His father's means warranted him in looking forward to one of the liberal professions for his career in life, and having chosen the law, he commenced his academic studies. But his hopes were rudely shattered by the sudden ill-health and subsequent death of his father, and when little more than sixteen years of age he found himself the mainstay and support of his mother and his younger brother and sisters. From this responsibility he did not shrink, and though the chosen avenue of life was closed to him, he knew that others would open to the faithful, honest and industrious worker. In the busy working-day world he did not intend to be a drone. The first years of his business life were moderately successful, but did not satisfy his ambition, and he began to cast about for other fields of labor, where the reward would be more in proportion to the enterprise. In the meantime, however, he did not cease to take an active interest in the public affairs of his native country, and in 1834 his fellow-citizens elected him to the Legislature of New York. The most notable thing in his legislative career was his advocacy of the New York & Erie Railroad, then lately projected, and which was seeking State aid in its construction. Though he was not thirty years of age, he made a wise and prophetic speech, urging upon the Legislature the importance of timely aid to the great enterprise. Though the measure did not pass at that session the following year the aid was granted. But he still desired a wider theater for his operations and ambition, and in 1835 he removed to Chicago as the representative of a number of Eastern capitalists who, associated under the name of the American Land Company, were making large investments in Chicago town lots, and other Western lands. Here he established a loan and trust agency, and commenced those vast operations and enterprises which resulted in making a small city a great one. His success was not unbroken, and the financial depression of 1837 found him unprepared for the storm, mainly through his attempt to carry others. But he bravely struggled through, and after several years of unwearying exertion, he came out with untarnished name and credit. Those were indeed days of depression, discouragement aud gloom. The vision of the future greatness seemed to depart from Chicago forever, and the luckless holders of corner lots loathed

the very sight of their possessions, and could not even give their lots away. Men subsequently became millionaires, because they could not sell their land at at any price during those days of desolation and despair. But if many lost faith, Ogden did not, and throughout all those trying years from 1837 to 1843 maintained a bold and courageous front. On the incorporation of the city in 1837 Ogden was elect Mayor, over John H. Kinzie, the Whig candidate. In all matters of public improvement he was untiring and zealous, and where it was possible always sought to place such improvements on a solid and enduring basis. Many street improvements he made at his own or the expense of those associated with him in his town property.

But the several years following 1837 were years of trouble. The prosperity of Chicago received a check, as did that of Illinois and the whole country. Business was prostrated. But worse than that; the State had embarked its credit in a vast system of internal improvement, too costly for the time. The canal was abandoned, work on the railroad ceased; the State could pay no longer and was bankrupt. The debtors were in a vast majority and it was hard to pay debts, much harder to pay taxes. Then went up the coward and despairing cry of "Repudiation"-"Let us have stay laws, relief laws, anything to save us from our bitter enemies, the creditors!" Throughout the city and throughout the State only the wild and senseless clamor of repudiation was heard. In the city a meeting was called by frightened debtors and some demagogues, to take measures looking to the repudiation of the city debt. Inflammatory speeches greatly excited and made desperate many of the crowd, and everything looked as if dishonor would crown the city's brow. In the midst of the excitement Mr. Ogden stepped forward to address the crowd. The sentiment in favor of repudiation appeared to be overwhelming, and it seemed like madness to endeavor to stay the whirlwind of desperation that was determined to sweep all before it. But he was equal to the great occasion. In a few wellchosen sentences he exhorted the citizens not to commit the folly of proclaiming their own dishonor. He besought those who were embarrassed to bear up against adverse circumstances with the courage of men, remembering that no misfortune was so great as personal dishonor. That it were better to conceal misfortune than to proclaim it: that many a fortress had been saved by the courage of its inmates in concealing their weakness. "Above all things, do not tarnish the honor of our infant city." His eloquence prevailed, and to him, more than to any other one man is due the fact that the city's credit was saved. Nay more than that: the example of that time became a guide and a tradition, and to it we owe that high sense of honor and financial integrity which has preserved the city's good name and fame against the schemes of all subsequent repudiators. Mr. Ogden's influence in this respect was felt throughout the State, and the honor of Illinois as well as of Chicago was saved. There can be no brighter page in any man's history than that which contains such a story as this. But this was not the only occasion when Mr. Ogden's power as an orator changed the temper of an angry and excited crowd. It was when he was building one of his Wisconsin railroads. He and others had obtained large stock subscriptions from the farmers and villagers along the line. Hard times came on, the road was not completed, but the subscriptions had all been paid. The people began to think they had been swindled, and Mr. Ogden was denounced as the chief offender. Threats against his life were made if he

should ever show himself in the country again. He heard of these threats, and against the counsel of his friends he called a public meeting and announced that he would address the people. A crowd of excited men gathered together, ready for almost any act of violence. He was received with hisses and groans, and at first could hardly be heard, but he appealed to their sense of fair play so effectively that at last they began to listen. Clearly and cogently he related the facts; spoke of his own losses and sacrifices; how unavoidably the work had been delayed. Then he showed what would be the effect of the completed road; how it would bring a market to every farmer's door, and would treble the value of every farm, and that if they would be patient a little longer all would be well. After he had finished a committee was appointed to wait on him, not to lynch him, but to say: "Mr. Ogden, we are authorized by the farmers and the stockholders along the road, to say, if you wish it, we will double our subscriptions." Another display of his oratory was exhibited on a more pleasing occasion. In 1839 Oliver Newberry built a magnificent steamboat, and called it the Illinois. It was a Chicago steamer, and the citizens of Chicago determined to present it with a splendid flag worthy of such a vessel, and Mr. Ogden was selected to make the presentation speech. It was a beautiful day in summer, and the whole city turned out en masse to witness the spectacle. General Scott was present on the occasion. Standing on the deck of the steamer, General Scott by his side, and the commander of the vessel, Captain Blake, and the owner, Mr. Newberry, in front of him, Mr. Ogden commenced by speaking of the "splendid specimen of naval architecture" on which he stood, and of his pleasure in being the organ of presenting the appropriate gift to the steamer bearing the name of our State. He spoke of the wonderful advance our country was making, of the enlarged means of communication between the East and the West, binding together the Hudson, the Great Lakes and the Mississippi. He spoke of the prairie fires as the "Pillar of fire by night" lighting the path of Empire on its Western way. He paid a glowing tribute to the memory of Robert Fulton, but for whose genius the lake and the prairie around it would have still remained in the solitude of nature. Then turning to Captain Blake and unfurling the silken banner, he said: "We present to you our country's flag. To you it is no stranger; under a most valiant chief [bowing to General Scott] whom a grateful people have not forgot to praise, bravely and honorably have you defended it in war. Stand by it in peace. Stand by it forever." To recount the labors of Mr. Ogden in connection with the railroads of the Northwest would be to write a volume. He was called the "Railway King of the West." East, West and South he pressed his railroad enterprises, and it was his desire to bring every farm in the Northwest within reach of a road. It was in April, 1849, that the first locomotive started west from Chicago. It drew a train ten miles from the city. It was the earnest of Chicago's greatness. That road was built by William B. Ogden. The panic of 1857 found Mr. Ogden heavily obligated as endorser for the Chicago, St. Paul & Fond du Lac Railroad Company, but he weathered the storm successfully, without loss, and without assistance from the hosts of friends who tendered him almost unlimited means during those trying times. It was at this time that a Scotch nobleman sent him the following note:

"My dear Mr. Ogden:—I hear you are in trouble. I have placed to your credit in New York £100,000. If you get through I know you will return it; if you don't, Jeanie and I will never miss it,"

Although this princely liberality was not accepted, it will always remain a gratifying exhibition of the esteem and confidence which Mr. Ogden inspired in those who knew him. Mr. Ogden was one of the chief organizers of the Chicago & Northwestern Railway Company in 1859, now one of the largest, if not the largest railway corporation in the United States. In 1856 he organized a lumber company on the Peshtigo River in Wisconsin, purchased immense tracts of pine lands, erected extensive mills and factories and built up at the mouth of the river on Green Bay a thriving village. In 1860 he purchased at Brady's Bend, on the Alleghany River, in Pennsylvania. some fivethousand acres of iron and coal land, and organized the Brady's Bend Iron Company, with a capital of \$2,000,000. This company employed over six hundred men in their furnaces and mills and turned out year after year over two hundred tons of rails daily. When the Union Pacific Railroad Company was organized, under the act of Congress in 1862, Mr. Ogden was chosen its first president, but his other enterprises induced him subsequently to retire from the presidency, though he remained a director, and gave what service was possible to the construction of the road. In June, 1868, he retired from the presidency of the Chicago & Northwestarn Railway Company, with some of the lines of which he had been connected for a period of twenty-one years. At a meeting of the stockholders on that occasion, this resolution was adopted: "Resolved, That his [W. B. Ogden's] connection with this company dating back for a period of twenty-one years, his disinterested labors in its behalf without fee or reward during the whole time, the benefit he has conferred upon it, and the country demand our grateful acknowledgement, and we hereby tender him our warmest thanks for his long services, and our best wishes for his long continued health and prosperity." Politically he was known as a Democrat. As such he was elected to the New York Legislature, and as Mayor of Chicago. When the slavery question arose, he identified himself with the free-soil party, and in 1848 supported the Van Buren and Adams ticket. In 1860 he supported Mr. Lincoln, and was elected to the Illinois Senate on the same ticket. He favored the war for the Union, but was opposed to the emancipation proclamation and the policy of the administration, and this led him finally to antagonize the Republican party. The later years of his life were spent largely in New York. At his villa of Boscobel, on the Harlem River, he dispensed a noble and generous hospitality. It was here in his retirement and repose from his chief business cares, that news suddenly came upon him-" Chicago is burning." He started at once for the West, and arrived in Chicago on Tuesday, October 10. He found only a mass of black and smoking ruins. The house of his brother, Mahlon D. Ogden, was the only house remaining on the North Side. The following day he received the news of the utter destruction of his immense lumber establishment at Peshtigo, and that many lives had been lost. Remaining in Chicago a few days longer, to instil hope and courage in the hearts of the despairing and stricken citizens, he started for Peshtigo, where he was much more needed. General Strong, who accompanied him, has written a thrilling account of this fire and of the labors of Mr. Ogden during these trying times. After these herculean labors Mr. Ogden again sought the retirement of his favorite villa. Mr. Ogden's social qualities were of a high, a very high order. His mind, enlarged by travel and by extensive reading, sought relaxation from his immense business cares, in art, music and poetry. He was a great lover of nature, and

Bryant was his favorite poet. At his home he entertained with a generous hospitality, his mother and sisters assisting him. He was not married until late in life. In February, 1875, he married Miss Mariana Arnot, a daughter of Judge Arnot, of Elmira, N. Y. This most excellent and highly aecomplished lady cheered and solaced the declining years of his life. In his youth he had been separated by death from the one dear heart that he loved, to whose memory he remained ever faithful. Years afterward he would show to his most intimate friends some tenderly cherished relics - a ribbon, a glove, some faded flowers - mementoes of one whom he never could forget. Such fidelity to his youthful love was strikingly characteristic of the man. His nature was sympathetic, and his smile illuminated every circle. To relieve the distressed, to aid the deserving, to encourage the despairing, for these and all good works, he always seemed to have abundant time, and many now prosperous men can look back upon the time when the timely word or aid of William B. Ogden placed them upon the road to that prosperity. The most striking feature of his character was self-reliance. As Emerson says, "He could stay at home in his own ' He did not pretend to be powerful, he was powerful. He saw his way to the end from the beginning. To a lady whom he was seeking to encourage about her sons, he once said, "I was born close to a saw mill, was early left an orphan, christened in a millpond, graduated at a log school house, and at fourteen fancied I could do any thing I turned my hand to, and that nothing was impossible, and ever since, madam, I have been trying to prove it, and with some success. He believed that honest faithful work could accomplish every thing. His conversational power was very great. The artist Healy said of him that in conversation he was a worthy rival of the best three he ever met: Louis Phillippe, John Quincy Adams and Doctor Bronson. Guizot, the French historian and statesman, said of him as he looked upon his portrait, "That is the representative American, who is a benefactor of his country, especially the mighty West; he built Chicago." Ogden could indeed say, as he looked over the great West and the great city that he loved, "et quorum magna pars Fortunate in his life, he was also happy in his death. Cheered by the affection of his noble wife, surrounded by loving friends, honored and respected by all his fellow-citizens, sustained and soothed by an unwavering faith in the religion of his fathers, he entered the valley of the shadow of death. On the 3d of August, 1877, he died at his country seat, Boscobel, on the Harlem. His remains repose in Woodlawn Cemetery, near New York. To the citizens of Chicago it should be said, "Would you behold his monument, look around you!"

BENJAMIN W. RAYMOND, the third Mayor of Chicago, was born at Rome, N. Y., in 1801. His early years were passed in Oneida County and St. Lawrence County, N. V., and he received a good common school education. At the age of nineteen he commenced his business career as an employe for a lumber merchant. Afterward he commenced merchandising, and continued it with more or less success for several years. His mother had died when he was five years old, and his father when he was about twenty-two, so that upon Benjamin was now thrown the care of his younger brothers and sisters. The feeling of responsibility caused by these circumstances created in him habits of economy and industry, and these became to him handmaids of fortune. In 1826, under the influence of the celebrated revivalist, Rev. C. G. Finney, Mr. Raymond

made profession of religion, which he consistently maintained until the end of his life. He also became strongly imbued with strict temperance principles, and gave up the sale of liquor in his store, though it was one of the largest sources of profit to the merchant of those days. As early as 1831 he began to look to the Far West, believing that greater opportunities could be found there for the young business man than could be found in his native country. At this time he formed the acquaintance of Mr. S. N. Dexter, who encouraged him in his Western notions, and offered large financial

12M Caymonds

assistance. One or two trips into Northern Ohio and part of Michigan not proving very successful, he settled in East Bloomfield, N. Y., and for four years carried on a very successful business. Here, in the year 1835, he married Miss Amelia Porter, with whom he lived happily for almost fifty years, and who still survives him. Two sons were born to this marriage, one of whom is now dead. The other is Professor George W. Raymond of Williams College. His attention was now attracted to Chicago as a point of great future importance, and he determined to make it his future home. He arrived in Chicago in June, 1836, with a large stock of goods, and found the place running over with merchants and merchandise looking for nothing so much as for purchasers. The outlook for legitimate business was by no means favorable, and Mr. Raymond was obliged to look about for other points at which to dispose of his goods. Assisted by his friend Dexter, and in partnership with him, he also made large investments in real estate, and when the hard times of 1837 came upon the country the firm of B. W. Raymond & Co. found its liabilities largely in excess of its assets. But Mr. Dexter had both the ability and the will to assist the struggling firm, and during the years 1837, 1838 and 1839 advanced fully \$20,000, and thus the credit of the house was preserved and it passed safely through the terrible depression. In the year 1839 Mr. Raymond was elected Mayor of the city, on the Whig ticket. Although the Democrats were in the ascendancy, the popularity of Mr. Raymond enabled him to successfully carry the election. The main incident of Mr. Raymond's term of office was an exciting contest between the North and South divisions concerning a bridge over the Chicago River. The bridge had been swept away at Dearborn Street, and the people of the South Side were opposed to its being replaced. There were great jealousies existing at the time between the divisions, and the contest was waged with great bitterness. The Council was evenly divided, and Raymond, who held the casting vote, was a South-sider. Finally he decided that if the Northsiders would subscribe \$3,000 toward the erection of the bridge they should have it, and this being agreed to he gave the casting vote in favor of the bridge. It was during his term of office that the canal scrip was largely counterfeited. Mr. Raymond was exceedingly active in putting a stop to it. Several persons were arrested, and two were convicted and punished. The hard times brought great suffering among the laboring classes, and particularly to the "canallers," as the Irish laborers and their families were called, who had been working on the canal until the work was stopped by

the inability of the State to go further. These laborers thrown out of employment poured into the city, where they became only objects of charity. Mr. Raymond bestowed upon them the whole of the salary he received as Mayor. It was during his term of office that the Fort Dearborn reservation was laid out in town lots and sold. It had been expected by the people that the land would be donated by the Government to the city, but the Government was not very rich, and so the order went out for the sale of Fort Dearborn addition. Through the efforts of Mr. Raymond Dearborn Park was reserved to the city, and State Street was laid out one hundred and twenty feet wide instead of sixty. This he accomplished by his personal exertions. In 1842 he was again elected Mayor, much against his own personal wishes. City orders were being hawked about at a large discount, though good times were now returning. Mayor Raymond by a system of rigid economy in the administration of public affairs soon brought the city's credit to par. Mr. Raymond early became interested in railroads, and he was one of the first directors in the Chicago & Galena Union Railroad, the pioneer of the great Northwestern system. He was one of the foremost in many of the great undertakings that have tended to build up Chicago, but he was particularly active in promoting the religious and educational interests of Chicago and the West. He laid out the town of Lake Forest, and was active in securing the charter for its University. He was president of the board of trustees of the University for twelve years. He was one of the trustees of Beloit College, and also of the Rockford Female Seminary, and he gave largely of his time and means to their assistance. He did much for the town of Elgin; built the first woolen mill there, and in 1864 founded the celebrated watch manufactory, and was the first president of the company. For more than forty years he was a ruling elder in the Second Presbyterian Church of Chicago. His later years were passed in retirement and in the enjoyment of that ease his long life of labor had so nobly won. He died on the 6th of April, 1883, full of years and honor.

ALEXANDER LOYD became Mayor in 1840, engaging in business for many years as a builder and con-

Abtander Layd

tractor, owner of a lumber yard and proprietor of a dry goods and grocery store. The latter was run under the firm name of Loyd & Thomas until after 1857.

Francis C. Sherman was one of Chicago's pioneers, coming to this city from Connecticut in 1834. Like most of Chicago's Mayors he was, primarily, a

Francis , 6, Theman

merchant, being also interested in a brick yard at a later day. Mr. Sherman was Alderman of the First Ward in 1837, County Commissioner from 1840–45. mayor in 1841, chairman of the Board of Supervisors in 1851, and again filled the Mayor's chair for three

terms, commencing 1862.

AUGUSTUS GARRETT, one of the pioneer business men and public-spirited citizens of Chicago, came to the city in 1836. Originally from the State of New York, he had been a successful auctioneer both in Cincinnati and New Orleans, but bad fortune had overtaken him, and when he came to Chicago he was, virtually, a bankrupt. Introducing himself to Rev. Jeremiah Porter, the Church people interested themselves in his case and he soon was upon his feet again, financially. He sent on for his wife, whom he had left with her parents, on the Hudson River (being unable to support her), and the husband and wife were soon together again and settled down as permanent residents of Chicago-one of them, at least (Mrs. Garrett), to make her name blessed to posterity. In the winter of 1839, through the labors of Rev. Peter R. Borein, they were both converted to a belief in the Methodist faith, and became prominent Church members. Mr. Garrett's abilities as a clear-headed and successful business man were at once recognized in a public way. He served as Alderman in 1840 and in 1845 was elected to the mayoralty. His death occurred in December, 1848. Mrs. Garrett survived her husband until November, 1855, having two years previously bestowed the bulk of her husband's large fortune upon that noble institution for the propagation of Christian learning, known as the Garrett Biblical Institute. Mr. and Mrs. Garrett left no children.

ALSON S. SHERMAN was born April 21, 1811, in Barre, Vt., coming to Chicago November 1, 1836. The early portion of his residence in Chicago was spent as a builder and contractor, being engaged from 1845 to 1855 in the marble, stone and milling business, and in the sale of building material. Mr. Sherman was active as a local legislator, the public showing their confidence in him repeatedly. He served one term as Mayor, one term as chief engineer of the fire department, two terms as Alderman, about ten years on the board of water commissioners, and acted for a number of years as city school trustee. In fact, in most of the public enterprises which marked Chicago's early growth, Mr. Sherman took a leading part. He was married February 26, 1833, and has nine children living. Mr. Sherman's residence is Waukegan.

JOHN P. CHAPIN, Mayor of Chicago in 1846, was in business, for many years, as a forwarding and commission merchant. He first established himself alone, and later became a member of the firm of Wadsworth,

Alm F. Chapmi

Dyer & Chapin, who were also large packers, operating a house on the South Branch. In 1844 Mr. Chapins served as Alderman from the First Ward, but was better known as a merchant than as a politician.

JAMES CURTISS, a lawyer by profession and a native

Janufurtif

of New York, came to Chicago in 1835. He held many offices of local trust, being Clerk of the County Court,

State's Attorney, and Alderman for two terms. He was elected Mayor in 1847 and again in 1850.

James H. Woodworth acted as Mayor in 1848 and 1849. He was a native of New York, coming to Chicago in 1833, and early becoming a marked public character. Mr. Woodworth engaged in the milling

Jas H Woodling 7

business, and was part owner of the old Hydraulic Mills for some time. He was elected Alderman in 1845 and again in 1847, and was later a commissioner of water works, while during 1855 and 1857 he was sent to Congress.

Walter S. Gurnee was born at Haverstraw-onthe-Hudson, N. Y., in 1813. Having lost his father at the age of eight years, he left his home to find another with his uncle, Judge John D. Coe, at Romulus, Seneca Co., N. Y. Here he remained until old enough to take care of himself. Mr. Gurnee's first independent business venture was at Detroit in 1835, and the following year he went to Chicago, where he, at first, started

W. S. Gurnes

in the saddlery business, also carrying a stock of general hardware. Until his retirement from business, was engaged in the leather trade, operating, in early days, one of the largest tanneries in the West. He was one of the original directors of the Board of Trade, and was elected Mayor of Chicago in 1851 and 1852. Mr. Gurnee was always considered one of the most substantial business men of the city, being so confident of its continual growth that he invested in real estate in localities which, at the time, were far beyond its limits. He, with Charles E. Peck, purchased considerable land along the line of the Chicago & Milwaukee road, and founded the present beautiful village of Winnetka. Mr. Gurnee is now a resident of New York city, having removed there in 1863.

CHARLES M. GRAY, Mayor in 1853, was a native of New York, coming to Chicago in 1834. At first he manufactured grain cradles in a small way, and afterward associated himself with Cyrus McCornick in the

Combray

manufacture of reapers. He was also engaged in business as a wholesale grocer, and had merely a local name as a public man. He is assistant general freight agent of the Lake Shore and Michigan Southern Railroad.

ISAAC L. MILLIKEN was one of Chicago's early blacksmiths, but being industrious, ambitious and popular, obtained a smattering of law and served the city as

Isciac L. Milliken.

Alderman twice and both the city and county in a judicial capacity. He acted as assistant County Judge for few years, commencing with 1853, and began his service as Police Magistrate in 1856. He became Mayor in

1854.

LEVI D. BOONE was born December 8, 1808, near Lexington, Ky., being a grand-nephew of the noted Daniel Boone and a son of "Squire" Boone, a Baptist minister, and Anna Grubbs, of Virginia. He was the seventh son, and in his tenth year was left fatherless, his mother being poor and burdened with a large family. His early days were spent among Indian outrages, and his first recollections were of the active and brave part taken by both his parents in subduing the savages. His father was killed at the battle of Horseshoe Bend. Growing up amid such scenes, it is quite remarkable that when twenty-one years of age Dr. Boone should have been able to graduate with honors from Transylvania University. In the spring of 1829 he removed to Edwardsville, Ill., to engage in the practice of his profession. Subsequently he settled in Hillshoro, Montgomery County, and upon the breaking out of the Black Hawk War in 1832 responded as the very first man in his county, and served as Captain of a cavalry company. In 1836 Dr. Boone removed to Chicago and at once became identified with its progress. At first he engaged in the insurance business, but the panic of 1837 forced him to return to practice. For a number of years he was western head of the Mutual Life Insurance Company. He served as city physician for a number of years, and his invaluable services during the cholera epidemic of 1848 are still remembered with gratitude by many early residents. Having served three successive terms as Alderman, he was elected Mayor in 1855, and it was during his administration that the "beer riots" were quelled. During the war

L. D. Boon

Dr. Boone was a faithful Union man, and therefore the following story told of him ever retains its "flavor:' "He was one of the physicians at Camp Douglas during the incarceration of Confederate prisoners, one of whom, a boy named Tom Green, got the good Doctor into a peculiar scrape. Green's mother came to Chicago and immediately set about securing her son's release, aided by a Mrs. Morris. A plan was arranged by which Tom should promenade a certain stretch every day where his mother could view him through a field-glass from the roof of an adjoining building. But Mrs. Green couldn't stay and departed, leaving \$50 for her boy in care of Dr. Boone, which was to be used in buying necessaries. The Doctor placed the amount in his safe in an envelope and labeled it 'Tom Green's money,' and was then called to Washington. Green learned of the money and its location, and secured it through the connivance of a medical student during the Doctor's absence, the student agreeing to let Tom escape for \$30. The bargain was made and Tom proceeded to escape by climbing a fence and-found himself in the Federal ranks, betrayed by the student! The Union soldiers tried in vain to compel Tom to give up the information relating to his attempted escape by moderate means, and only succeeded after stringing him up by the thumbs. Then the vouthful

Confederate confessed that the money to purchase his liberty had come from Dr. Boone, and that was all he knew about it. Immediately upon Dr. Boone's return to Chicago he was arrested on a charge of conspiracy to aid in the escape of prisoners of war. No explanations would suffice at that time, and he was placed under arrest by Colonel Joseph Tucker, then in command of Camp Douglas. After a time the Doctor was released on parole, and that parole was still in force when his spirit took its flight." Dr. Boone was the first man in Chicago to advocate the award of private bounty as an inducement for men to enlist in the Federal ranks. For himself he backed the proposition to give a city lot or a farm of forty acres to the widow of the first Chicago volunteer who should fall in defense of the country's honor; and the widow of a gallant soldier under Colonel Mulligan received the Boone bounty as promised. In March, 1833, Dr. Boone was married to Miss Louise M. Smith, daughter of Judge Theophilus W. Smith, of the Illinois Supreme Court. At the time of his death six of their eleven children were left to them-two sons and four daughters. Aside from his public life, Dr. Boone is best known as a pillar of the Michigan-avenue Baptist Church, and as a trustee and valued patron of the Chicago University. His life, in short, was filled with useful works, and his marked success as a man was

THOMAS DYER, an old and respected settler and merchant of Chicago, was born January 13, 1805, at

That Dyn

Canton, Conn. His father was an officer of the Revolutionary War. Young Dyer was brought up as a farmer's son, but developed sterling business traits at an early age. When he was about thirty years old he started for Chicago and the West, and soon engaged in general trade, also erecting a warehouse, and doing business under the firm name of Wadsworth, Dyer & Chapin; Newberry & Dole, and this house were among the very earliest warehouse firms to engage in business in the then young city. Mr. Dyer at once assumed his place as a leading man of affairs in the growing community with which he had cast his lot, being one of the directors of the Galena & Chicago Union road. He also served one term in the Legislature, was president of the Chamber of Commerce in 1848, and Mayor of the city in 1856. His death occurred at Middletown, Conn., on the 6th of June, 1862. Mr. Dyer was twice married-the first time to Adaline Hopkins, the second time to the widow of Elijah K. Hubbard. Clarence H. Dyer, his son, is still a respected business man of this city, being a child about two years old when his father removed to Chicago. Mrs. Dyer resides with Elijah K. Hubbard, Jr., her only surviving child.

JOHN WENTWORTH was born in Sandwich, Strafford Co., N. H., on March 5, 1815, of the Hon. Paul and Lydia | Cogswell) Wentworth. His paternal grand-father was the Hon. John Wentworth, Jr., member of the Continental Congress from New Hampshire, whose name is signed to the original "Articles of Confederation." His maternal grandfather was Colonel Amos Cogswell, who served through the entire Revolutionary War, entering at the same time that General Washington took command of the Revolutionary Army, under the old tree at Cambridge, Mass.; and served through the

entire war, with six brothers, and assisted at the formation of the Society of Cincinnati at the disbanding of the Revolutionary Army. John Wentworth is descended on both sides from the earliest settlers of New England, and there is no blood in his veins of any emigrant, since the year 1700; all his ancestors, after that date, living and dying in New England, and nearly all of them in the State of New Hampshire. The ancestor of his family in 1066 was Reginald Wentworth,-Rynold de Wynterwade-who was proprietor of the fief of Wentworth, in the wapentake of Strafford, West Riding of Yorkshire, as shown by the celebrated Domesday Book; Wentworth means the White Hall, Court or Town. A periodical of years since thus describes the birthplace of John Wentworth: "He was born in that part of New Hampshire known as the Switzerland of America; among those highlands separating those beautiful and picturesque bodies of water, dotted with hundreds of little islands, which are known as Squam and Winnipisseogee Lake. As the traveler from the capital of the State reaches the first of that extensive range of mountains, which he never loses sight of until he arrives at Mount Washington itself, known as the Red Mountain, he beholds a promontory of comparatively low lands, nearly equally divided between hills, vales, and little lakes, jutting up among precipitous and rugged mountains, and from which there seems no ontlet, except in the direction of the entrance. At the extreme end of this peninsular strip of land, bounded almost entirely by mountains, with no house, no road, nor any place beyond save the mountain's craggy side; less than a quarter of a mile to the right of the road that now leads through a hardly passable gorge to Thornton, in the town of Sandwich, at the foot of Mount Israel, and at the last cultivated farm thereon, was Colonel Wentworth born, in the sight of almost perpetual snows. Seldom indeed are all those towering peaks that line the town of Sandwich snowless, and few are the fields that miss the frosts for six months in a year. It blights the blossoms in the spring and the unripe fruit in autumn. Few are the agricultural products adapted to its short and cool summers, and to its winters, vieing almost with those of Franconia, known as the coldest place in the Union. The soil is sterile and rocky; and its original settlers, in 1768, declared that they found it a dense mass of rocks and trees, with no bare spot save its lakes and rivers. At the date of the birth of Mr. Wentworth there were no stores, no hotels, and no places of recreation, where one could while away a leisure hour, or which could entice one from the paths of industry. Work was the only recreation and sleep the only rest. The evening shade was the signal for general retirement, and the day-dawn found all breakfasted, and the oxen yoked at the door. Amid such habits, and upon such a theater, was the subject of this sketch born and reared." And so restricted were its mail facilities, that the news of the Battle of New Orleans reached the town on the day of Mr. Wentworth's birth.

The first school attended by John Wentworth was the public school taught by Benjamin G. Willey, at Sandwich, in the winter of 1819-20. He attended the common schools of Sandwich until the winter of 1826-27, when he went to reside with Dr. Asa Crosby the ancestor of the distinguished family of all the Crosbys in the United States, of Gilmanton, N. H., and attended the academy there under the charge of Asa Emerson Foster. During the summer and fall of 1827, he was a pupil of Rev. James Towner at the Wolfeborough, N. H., Academy, and in the summer of 1828 was at the

New Hampton, N. H., Academy, of which Benjamin F. Farnsworth was principal. On August 12, 1828, the inchoate congressman participated in the annual exhibition, being then thirteen years of age, and declaimed an extract from Webster's eulogy on Adams and Jefferson. In the winter of 1828-29 he attended a school taught by Dudley Leavitt, of Meredith, N. H., the celebrated almanac-maker. In the summer of 1829 and the winter of 1829-30, he attended the New Hampton Academy, under the same preceptor as before; and, on August 13, 1829, at the annual exhibition, took part in a Greek dialogue. He remained at home during the summer of 1830, and returned to the Academy in the winter of 1830-31. At this Academy, in the spring of 1830, he founded the Social Fraternity, which was created by the founder in order to supply the necessity existing for a debating and literary society, other than the Literary Adelphi, an association whose advantages were limited to students of older age than that of Mr. Wentworth. It was a fitting prelude to the life of John Wentworth, editor, mayor and congressman, to find him at the age of fifteen organizing a literary society, to provide students with those educational amenities from which they were debarred because of their age. He remained at this Academy until the winter of 1831-32, participating in the exhibition of August 13, 1831, and there took an original part in the discussion: "Which has conferred the greatest benefit upon mankind, the discovery of the art of printing or the mariner's compass?" During this winter he taught his first school at Simpson Hill, New Hampton, N. H.; and returned to the Academy subsequently and remained until the spring vacation. In the spring of 1832 he attended the Academy of South Berwick, Me., under the charge of Lewis Turner, remaining until the close of the summer term, and there delivered the valedictory address. During his stay there he wrote several articles for the Democratic Press in defense of General Jackson's financial policy, which received high eulogium. Thus, during his adolescence, is John Wentworth noticeable for his prominent literary ability. In the autumn of 1832 he entered Dartmouth College, N. H., from which institution he graduated in 1836. During his second winter in college he taught school in Hanover, about two miles south of the college; during the third winter at college he taught school at Grafton, N. H., and the fourth winter at East Lebanon, N. H. While there he was a substitute for one of the leading men in the school district, a delegate to the county convention, to nominate a democratic candidate for Senator, and was made chairman of the committee on resolutions; his reports and the remarks called forth by the transaction of business received high encomiums from the delegates and the Press. His first and only vote before coming to Chicago was cast for Isaac Hill, Democratic candidate for Governor, and this action likewise manifested the bent of his subsequent career. On Monday, October 3, 1836, he left the paternal roof-tree in Sandwich, N. H., with a general idea of going West and with \$100 in his pocket. The opinions of the prominent men of that time may be inferred from the following letters, given to Mr. Wentworth prior to his departure:

"MOULTONBOROUGH, September 22, 1836.
"Hon, John Reynolds, Dear Sir: Permit me to introduce to your acquaintance Mr. John Wentworth, a young man of good talents, who has just completed his collegiate studies, and visits the West for the purpose of studying and pursuing the practice of the law. As your knowledge and influence will enable you to direct him in the choice of a desirable spot to locate, whatever assistance you may render him will be gratefully received and considered a favor conferred on, Your friend and obedient servant, "Benning M. Bean."

John Reynolds was Governor and Member of Congress from Illinois, and Mr. Bean was Member of Congress from New Hampshire. The other letter was from Governor Isaac Hill, formerly United States Senator from New Hampshire, to General Henry Dodge, Governor of Wisconsin:

"Concord, N. H., September 29, 1836. 'Sir: Permit me to introduce to your friendly attentions Mr. John Wentworth, a graduate of Dartmouth College, of the present year. Mr. Wentworth possesses merit as a scholar and a gentleman, and has already discovered talent as a politician which gives him the first rank among our young men. He goes to the West in pursuit of fortune and fame. Should he take a stand in your Territory, I cannot doubt that he will receive, as he will merit, the patronage and friendship of the pioneers of your flourishing country.

I am, with high respect,

Vour obedient servant,

"Isaac Hill."

These letters and the facts recited show how well his dominating characteristics were exhibited in his early life; how the struggles, the difficulties and the encomiums he experienced, seemed to be preparatory to the wider, higher sphere he was ultimately to fill. Upon his journey he traveled by post-coach to Concord, N. H.; thence across the Green Mountains to Troy, N. Y .; theuce to Schenectady; thence, for the first time, on the cars to Utica, N. Y.; thence, for the first time, on the canal, to Tonawanda, N. Y.; thence by stage to Niagara Falls; thence on a steamer, for the first time, to Buffalo, thence on the steamboat Columbus, Captain A. Walker, to Detroit, arriving there October 13. He took a pedestrian excursion of some forty miles into the country from Detroit, visiting Ann Arbor and Ypsilanti, and advertising for a position as school teacher, in the Detroit Free Press, but meeting with no response to his advertisement, and not being inspired by the "star of inevitable destiny" otherwise to remain, he returned to Detroit upon the seventeenth, and sent his trunk to Chicago by the brig Manhattan, Captain John Stewart, and took stage for Michigan City, Ind., arriving there on the afternoon of October 22. The ensuing day he set out on foot for Chicago. Several old residents remembered seeing Mr. Wentworth en route to Chicago, tall, dusty, gritty and independent as he strode toward the goal, where he was to win fame and fortune such as are achieved by but few people. He tarried over the night of October 24, at Calumet, now known as South Chicago, and arrived in Chicago on the forenoon of October 25, 1836, and accidentally meeting Matthew S. Moloney, then of the leading mercantile house of Wild, Moloney & Co., formerly of Northfield, N. H., and an old schoolmate of Mr. Wentworth's, that gentleman strongly recommended to him the United States Hotel-previously the Sauganash-kept by the late John Murphy, afterwards well known as an Alderman and leading politician of the city. Since that date John Wentworth dines with Mrs. John Murphy every 25th of October. He determined upon pursuing the study of law, and made the necessary arrangements having that end in view with Henry Moore, a leading lawyer of this city, whose ill-health required him to return to the East, where he died of consumption many years ago. But, on November 23, 1836, he was induced to take editorial charge of the Chicago Democrat. Of the influence of that newspaper upon civic and general politics; of the sturdy denunciation of the wild-cat and other fictitious paper money; its stanch advocacy of "Liberty and Economy;" its stinging and pungent epigrams, the history of those times bears witness. A short time after he took charge of the paper, the mark of this twenty-one years old editor was made in the city of his choice, and many of the prominent citizens of Chicago and propri-

etors of the newspaper, urgently solicited him to remain in charge of the paper, and proffered him every financial assistance necessary for its purchase; so evidently was Mr. Wentworth the right man in the right place. He accordingly made arrangements to take the paper, and within three years the establishment costing \$2,800 was owned by John Wentworth, free from indebtedness. He had earned it by incessant labor and indefatigable application, rigid economy and unremittent attention to business-such attention as his magnificent physique and the stern, persistent daily labor of his early New England home fitted him to endure. In the winter of 1836-37, Mr. Wentworth attended the meetings held in the Saloon Building, to consider whether the Legislature-then in session at Vandalia-should be applied to for a city charter. But very few of those who attended those meetings are now living. He also took an active part in the election of Chicago's first Mayor, William B. Ogden. He was the secretary of the first political meeting ever called in the old First Ward. In 1837, he was appointed by the Council the first corporation printer of Chicago, and early in 1838, was appointed School Inspector, which office, under different names, he held at various times afterward. Mr. Wentworth was one of the earliest, and has ever been one of the most persistent advocates of the common-school system in the West. In 1839, he was appointed one of the "aides-de-camp" of Governor Carlin. In 1840 he commenced making speeches to public assemblages outside the city, and in February, 1840, wrote a letter upon the relation of the banks to the Govern-ment and their reciprocal duties. This letter was printed in pamphlet form, and copied into the Administration papers of the day; it received deserved eulogiums, and attracted a great deal of attention to the utterances of the newspaper, whose editor, in such terse, powerful yet elegant phraseology, clearly solved one of the vexed financial and economic questions of the day. During this year, also, he started the Daily Democrat, the first daily Democratic newspaper in the Northwest. Despite these various demands upon his time and mental capacity, he still pursued his legal studies, and early in the spring of 1841 he left Chicago to attend the law lectures at Cambridge, Mass., with the intention of remaining there a year, but hearing that he would probably receive the nomination for Congress, he returned to Chicago late in the autumn of 1841, and was shortly thereafter admitted to the Bar. On May 18, 1843, he was unanimously nominated for Congress by the Democratic convention at Joliet. In consequence of the failure of the Legislature to district the State, the election which should have taken place in 1842 did not occur until August, 1843, when Mr. Wentworth was elected from the Fourth District of Illinois by a large majority, at the early age of twenty-eight, to a seat in the House of Representatives of the Twenty-eighth Congress, the youngest member of that body. In 1844 he was re-nominated, "nemine contradicente," and re-elected by a majority of more than three thousand. He was renominated in the same manner and re-elected by a majority of over six thousand in 1846. In 1848 he was again nominated and rolled up a majority of three thousand five hundred and fifty-five votes, while in Washington, attending to his Congressional duties, and notwithstanding the cry of rotation in office made by aspirants. As an evidence of Mr. Wentworth's personal popularity it may be remarked that at the time of the antagonism to him, Mr. Polk's majority was, in the same district, only three thousand and eight votes; also, that Mr. Wentworth's majority was greater than that of any

other person in the State whose election was contested by an opposing faction. The Congresses to which he was elected up to this period of his life were the Twenty-eighth, Twenty-ninth, Thirtieth and Thirtyfirst. Before Mr. Wentworth entered Congress he had never seen a legislative body in session, yet his actions in Congress were such as though he had been engaged in parliamentary debates for years. In fact, his whole life has exhibited a wonderful adaptability of mind and aptitude of manner, with a comprehensiveness of understanding that made all questions readily understood by him. Before his election to Congress there had not been any member who resided on the lake, nor had there been one north of the center of the State of Illinois, and until the admission of Wisconsin as a State he continued to be the sole representative who resided upon the shores of Lake Michigan. His district embraced the counties of Boone, Bureau, Cook, Champagne, DeKalb, DuPage, Grundy, Iroquois, Kane, Kendall, Lake, LaSalle, Livingston, McHenry, McLean, Vermillion and Will, and it extended from the Wisconsin State line on the north to a distance of one hundred miles below the line of the termination of the Illinois & Michigan Canal on the south, and from the Indiana State line on the east to counties touching Rock River on the west. Its area was two hundred and fifty miles by one hundred miles, and comprised the most wealthy and populous portion of the State. Since that time several entirely new counties, and parts of other new counties, have been created out of his old district. Mr. Wentworth was a member of the Baltimore National Convention of 1844, which nominated James K. Polk for the presidency; also of that of 1848, which nominated General Lewis Cass. He was chairman of the committee that called the celebrated National River and Harbor Convention which assembled at Chicago in 1847, and Mr. Wentworth also drafted the address to the people of the United States, urging them to send delegates to the convention. In 1850 he peremptorily declined a renomination to Congress, and retired from his representative duties on March 4, 1851. In November, 1852, he was elected to Congress from a new Congressional district, the Second, made under the census of 1850, comprising the counties of Cook, DeKalb, Du-Page, Kane, Lee, Whiteside and Rock Island. His term in the Thirty-third Congress expired on March 4, 1855, and again he refused to accede to the solicitations of his constituents, declining a re-nomination. He thus served two years under Acting-President Tyler; he was present at the inauguration of President Polk and served out his term of office; was present at the inauguration of President Taylor and that of Acting President Fillmore, and served two years under their administrations. He was then out of Congress for two years. He was present at the inauguration of President Pierce, and served two years under his presidency. He was present when John Quincy Adams fell in the House of Representatives, and was one of the committee appointed by Speaker Robert C. Winthrop to take his remains home to Massachusetts. He was elected to the Thirty-ninth Congress from a district composed alone of Cook County, and was upon the Committee of Ways and Means under the administration of Acting-President Andrew Johnson. During this session he was an earnest advocate of the immediate resumption of specie payments, often declaring that every day's delay therein would prove calamitous to the country. He attended the inauguration of Abraham Lincoln and was one of the committee to receive his remains at Chicago. During Mr. Wentworth's occupancy of a seat in Congress,

there was much local legislation requisite for the crescive Chicago of that era, and he worked intelligently and incessantly for those improvements that were necessary for her future greatness. He urged, and accomplished, the improvement of the harbor, the establishment of light-houses and ports of entry, the erection of marine hospitals, etc. He championed the causes of his constituents in contested cases under the pre-emption acts, and was the unpaid agent for numberless claimants for bounty, back-pay, etc., accrued during the Mexican War. He strenuously championed pre-emption, graduation and homestead laws; he was the first Western congressman who introduced a bill advocating the bonded warehouse system, and he was mainly instrumental in passing the land grant bill for the Illinois Central Railroad through the House of Representatives. The remarks of the Democratic Review, made during his congressional career, aptly describe his service: "Colonel Wentworth's political career has been marked by untiring industry and perseverance, by independence of thought, expression and action, by a thorough knowledge of human nature; by a moral courage equal to any crisis; by a self-possession that enables him to avail himself of any chance of success when on the very threshold of defeat; and by a steady devotion to what he believes to be the wishes and interests of those whose representative he is. \* \* \* \* Few men of his age, under so many adverse circumstances, have attained to equal success, and still fewer are less indebted to accidental circumstances. So many obstacles have been already overcome by him, that he is never daunted by the hopelessness of any enterprise that it may seem desirable to undertake." Wheeler, in his "Biographical and Political History of Congress, Vol. 2, conveys the same idea as to Mr. Wentworth's persistence: "We mark him down as a man of untiring energy, whose mind once fixed upon a project is not apt to be diverted from it, but will make every consideration secondary to its accomplishment. Possessing a good knowledge of parliamentary tactics, and conversant generally with the means of success in any movement he may make, he calculates coolly and afar off, and turns every little circumstance to good account. We have seen him stand up in the face of denunciation and excommunication fierce enough to awe into submission any mind accustomed to acknowledge the obligations of that austere discipline which is characteristic of the Democratic party. If he has winced, we have never seen him. As a good local representative he has few superiors—perhaps none." The value of these criticisms lies in their having been contemporaneous, almost synchronous, with the performance of the legislative duties commented upon. Mr. Wentworth was one of the original stockholders of the Chicago & Galena Railroad, and continued one of its most urgent supporters, and was chairman of the executive committee of the board when the road was consolidated with the North-Western. In 1857, Mr. Wentworth was unanimously nominated, in a convention of delegates from all the old political parties that existed at that time, as a candidate for Mayor. The new party was designated, at that period; the Republican fusion. Upon receipt of the nomination Mr. Wentworth at once stated, in his speech at Metropolitan Hall, that if he was elected he wished it distinctly understood that he was elected to enforce all the laws of the city. This he proposed doing. He stated that he did not desire the salary; that he could not well attend to the duties without encroaching upon the responsibilities of his private business; and that the only consideration that made him a candidate was, that he believed the great mass of those who ought to take it, were deterred from doing so, from the moral certainty that they would greatly increase the number of their enemies. But, of all considerations, this would have the least weight with John Wentworth. He also explicitly stated that he would defer to the wishes of the people, if they elected him, and serve for one year, but that must be all that he would be expected to serve. In March, 1857, he was elected by over eleven hundred majority. His watchword, while serving the public, was that which dominated his individual business interests; "Liberty and Economy," and to the doctrines implied in that watchword he steadfastly adhered. It may be remarked that, during this term, he introduced the first steam fire-engine into the city, which was named "Long John" in his honor; and his first official act was to call a board of engineers who established the present grade. Mr. Wentworth declined a reelection, but he was again nominated and elected to the mayoralty in 1860. When the Prince of Wales visited Canada in 1860, there was a strong effort made to have him make a tour of the United States, but the Canadian authorities were opposed to this, and wished to take him through the British Provinces, with an idea of enlisting his influence for their development, with reference to the then contemplated Pacific road through the British Provinces. Lord Lyons, then British minister at Washington, was exceedingly anxious to gratify the American people in their wishes, and he suggested that the Governors of the States and the Mayors of the principal cities should meet the Duke of Newcastle upon the arrival of the Prince in Canada, to have a consultation upon the subject. It was understood that the Duke of Newcastle had the movements of the Prince in charge. Mr. Wentworth was one of the large body of prominent men of America who met the Duke at Montreal-but was the only one from Illinois. It was urged by the Canadian authorities that the Prince would not be well received by the masses of the foreign population in the United States, and disturbances might arise, and it was contended that those disturbances would be inaugurated in Chicago. Mr. Wentworth assured the Duke of Newcastle that he had only to make his arrangements through the British Consul at Chicago, and he, as Mayor of the city, would see that they were all carried out. And they were carried out, to the entire satisfaction of the Duke and to the pride of the people of Chicago. Mr. Wentworth in person superintended all the arrangements, and they were so satisfactory, that, after the return of the Prince, the Duke of Newcastle wrote him a very complimentary letter, stating that nowhere were the arrangements made and carried out so satisfactorily as they were at Chicago. He sent to Mr. Wentworth a large portrait of the Prince and also sent to him two Southdown sheep from the Queen's herd for his farm. During this term he introduced two more fire-engines, which were named "Liberty" and "Economy," after the prominent characteris-Upon each occasion of his tics of his civic rule. assumption of the Mayor's office, he found a large floating debt against the city, but at the termination of each of his tenures of office there was no floating debt, and he left money in the treasury for his successor. Mr. Wentworth positively declined a renomination to the office of Mayor, and, although it was frequently tendered him, has persistently declined it since that time. In 1861 he was elected a delegate to revise the Constitution of the State of Illinois, and during the same year was chosen a member of the Board of Education for three years. In all his official capacities, Mr. Went-

worth wielded all his influence in behalf of the common school system when it was very unpopular; and by his strong, urgent and sensible articles in the "Democrat," he was extremely influential in causing the first brick public school building to be erected in Chicago, called the Dearborn school; on the north side of Madison Street, east of Dearborn Street; it was always his favorite school, and at the time of the fire he was on the special committee in charge of it. In later years, when failing banks became largely in default to the school fund, his energy, both upon the board and in his newspaper, saved a large portion of those funds that, at one time, were considered lost; and had he been sustained by the action of a majority of the board, every dollar that was finally lost, by what he believed an unjust compromise with the banks, would have been saved. In 1863 he was appointed a police commissioner to fill a vacancy in the term, which expired in November, 1864. It was during this term as police commissioner that the raid by the Rebels upon Camp Douglas was to have been attempted, and he was all the time in private consultation with Colonel Sweet, in charge of Camp Douglas. Francis C. Sherman, the Mayor of the city, had authorized Mr. Wentworth to take entire charge of the police in case of any emergency; and during the entire night wherein Colonel Sweet made the arrests which caused such a sensation throughout the country, Mr. Wentworth was in a private room, with a man from each police station in the city, awaiting any suggestions that might be made by Colonel Sweet. While sitting there a messenger arrived from Colonel Sweet, bringing, with the Colonel's compliments, several pistols which he had just taken from the traitors outside the camp, and were so soon to have been used in liberating the prisoners. It was also during this period that, as police commissioner, he preserved order in the courthouse yard while the notorious Clement L. Vallandigham addressed the people. At the close of his remarks Mr. Wentworth took his place upon the court-house steps and made that ever memorable speech in reply to him; and when a disturbance was attempted, Mr. Wentworth called the attention of the crowd to the fact that Mr. Vallandigham could never have uttered his sentiments in the loyal city of Chicago but for the protection of the Chicago police, acting under his orders. He then asked of Mr. Vallandigham's friends the same courtesy while replying that he had extended to Mr. Vallandigham. Mr. Vallandigham's friends saw the point and gave Mr. Wentworth an attentive hearing. In 1868 he was again elected a member of the Board of Education for four years. One phase of his political career has been unnoticed hitherto in this article-the change from old-time Democracy to Republicanism, and his action upon the slavery question. Of these two matters, Zebina Eastman, the war-horse of abolitionism, thus wrote in 1857: "In politics Colonel Wentworth has ever acted with the old-line Democratic party; but when the old parties became split up, by making the slavery extension question a test, he went, with such other Democrats as Hamlin, Wilmot, King, Trumbull, Fremont, Blair, and others, into what is known as the Republican movement. To the success of this movement Colonel Wentworth has, by public speeches, by writing in his newspaper, and by efforts in every other way, bent all his energies. And if there is any truth in the old adage, that the tree which bears the best fruit is always known by its receiving the greatest number of clubs, Colonel Wentworth is singled out as one of the most effective laborers in the ranks of the opposition to slavery extension. It is not only in his own immediate neighborhood, but from the most distant parts of the Northwest, and from the extreme Eastern Press, Colonel Wentworth receives flattering testimonials of the effectiveness of his labors in the Republican cause, which he has espoused, by the violent personal abuse he receives from its opponents. No idiot, no drone, could receive the notice he daily does from the Press. Each day bears witness to the great fact that, if he is not hard at work, his enemies, at least, think he is, and are cautioning their party friends to beware of his efforts, and be prepared to counteract his movements. Of the services that Mr. Wentworth has rendered to his fellow-citizens, the late Hon. Thomas Hoyne-who came to Chicago a few months after Mr. Wentworth, and was intimately associated with him during his entire life in Chicago, a period of over forty-five years—thus eloquently speaks, in a set of resolutions adopted by the Chicago Historical Society, May 21, 1882;

"Whereas, This Society recognizes the long career of public service which has made the life of Hon. John Wentworth contemporaneous with the first organization of our municipal government and the entire history of Chicago since the year 1836. He was the first member of Congress from this district when it comprehended seventeen counties from Northern Illinois, of which he was the representative for many years. He was the Mayor and chief magistrate of the city, twice chosen at two different periods by the people, and his administration of city affairs is remembered to this day for its inflexible character, its economical expenditure of public money, its rigid execution of all laws and ordinances, the suppression of all vice and corruption, and the stern and impartial exposure and punishment of all crimes and criminals. He was the publisher and proprietor of the first newspaper ever printed in Chicago, and his name stood at the head of the Press of this State for a quarter of a century. His more recent labors, in the compilation of accurate historic material in respect to the early settlement and progress of the city, the personal reminiscences of a public life prolonged through one of the most eventful periods of American public history, and his recent lectures before this society, have all inspired a general public interest in the knowledge which he has accumulated; and this society, recognizing the value which his early contemporaries and the community at large attach to so signal a public life and career, do hereby, as a token of respect.

"Resolve, That the president and secretary be instructed to request of Hon. John Wentworth that he will procure a portrait

"Resolve, That the president and secretary be instructed to request of Hon. John Wentworth that he will procure a portrait likeness of himself to be taken so that it may be hung upon the walls of this institution, and remain as a memorial to posterity of the conspicuous position he occupied, and the public labors and services which he accomplished during a long and distinguished career, marked by the most extraordinary development in the rise and progress of this city, and his participation in the most moment-ous events of American public history." [Portrait by John Phil-

lips, of New York, presented September 1, 1882.]

The Calumet Club also adopted the following expressive preamble on October 8, 1881, in asking Mr. Wentworth to sit for his life-sized portrait for the club:

"Whereas, The directors of the Calumet Club appreciate in the life career and world-wide celebrity of the Hon. John Wentworth a great and noble example of what may be attained by force of character, strength and purity of purpose and public spirit, combined with generosity and kindness of heart, and recognize in his personality an incarnation of the spirit of Chicago—his own life history being virtually that of the settlement, growth and prosperity of the city, as well as a prominent part of the history of the Nation."

While he has written for the public as much as any other man in Chicago, no man has addressed more popular assemblages than he has, and his meetings have been essentially his own, being called in his own name and having no presiding officer. He speaks frankly his sentiments and takes the responsibility, and he has never failed to fill the house.

On November 13, 1844, Mr. Wentworth was married at Troy, N. Y., by Rev. Nathan S. S. Beman, D. D., to Roxanna Marie, only child of Hon. Riley and Roxanna (Atwater Loomis, of Troy, who, after many years of delicate health, died February 5, 1870. They

had five children, all of whom died young, except Miss Roxanna Atwater Wentworth, now living.

Since serving his last term in Congress, Mr. Wentworth has bestowed his time and attention upon his enormous stock-farm of about five thousand acres, at Summit, Cook Co., Ill., from which, like Cincinnatus, he was so often summoned to serve his countrymen. Mr. Wentworth's father was one of the largest real-estate holders in the State where he lived, and Mr. Wentworth's domestic early life was passed among the most distinguished of New Hampshire's agriculturists; and, in his public life, Mr. Wentworth had learned that nearly all the prominent men of this country had passed their later years upon large country estates. Mr. Wentworth had visited the farm of General Washington at Mount Vernon, and of the Adamses at Quincy, and more particularly was he pleased with a visit paid by him to ex-President Van Buren upon his farm at Lindenwood, N. Y.; and he had also heard of the Hermitage estate of General Jackson, of the Monticello estate of President Jefferson, and the Montpelier estate of President Madison, and had also talked of their estates, at Ashland and Marshfield, with those singularly great orators, Clay and Webster. These incentives made Mr. Wentworth determine upon emulating their example, and he selected the Summit as the location for his estate. This spot is noted as a dividing line between the streams that empty into Lake Michigan and pass out to the Gulf of St. Lawrence, and those that empty into the Illinois River and pass out into the Gulf of Mexico. Mr. Wentworth retains his interest in politics and is active in those pertaining to Chicago, but persistently refuses all proffers of nomination to office. In 1867 his Alma Mater, Dartmouth College, conferred upon him the degree of LL. D. Legum Doctor, and on July 2, 1873, he was elected president of the Alumni of the New Hampton Academical Institution, and in 1882 and 1883 he was elected president of the Alumni Association of Dartmouth College, for each of those years. In June, 1880, Mr. Wentworth was a vice-president of the Republican National Convention, being a delegate from the First District, but was declared ineligible by the majority report which confirmed congressional district representation. This, however, did not prevent his earnestly working for the nomination of U. S. Grant, and subsequently for the nominee of the convention, James A. Garfield. Mr. Wentworth grieves over the irreparable loss of his manuscripts and papers through the Chicago fire. He had kept a journal of all the great events that transpired while he was in public life, making entries therein almost every day, after the style of John Quincy Adams. He also had a complete file of the Daily and Weekly Chicago Democrat, from his first connection with the paper to its close, a period of twenty-five years. Mr. Wentworth is an active member of the Chicago Historical Society, and is especially interested in matters relating to Early Chicago, of which he has tacitly become the acknowledged depositary, and whereon he is conceded authority. His essays upon this subject are the classics of Chicago historiology. There is no man living that can so familiarly shake the hands of so many of the settlers of northern Illinois prior to 1850, male or female, as John Wentworth. He has likewise paid much attention to New England history, more particularly to the history of his native State, New Hampshire. The newspapers of that State frequently quote him as authority upon matters appertaining to its early history. He has been, for nearly a quarter of a century, vicepresident of the New England Historic Genealogical Society; and has been a frequent contributor to the columns of its recognized organ, the New England Historic Genealogical Register; a full set of which volumes he has presented to the Chicago Historical Society, together with many other valuable and rare works. Mr. Wentworth is also the author of the Wentworth Genealogy, in three volumes, conceded by critics to be the most complete and most perfectly indexed of any of that class of work published, and which is recognized in England and the United States as a standard work, and has been highly eulogized by many prominent literary men of both countries. Its collaboration occupied years of careful and cosmopolitan research.

"The Hamptonia," a quarterly published by the literati of New Hampton Academy, thus truthfully summarizes the life of this gentleman: "Mr. Wentworth, all through his editorial and official life, has shown himself not only a man of decided convictions, but has proved on many notable occasions that he had, under the most adverse circumstances, the courage to follow them. He has ever looked upon parties as only necessary organizations for the accomplishment of desirable ends, and he has no party attachments beyond his assurance of right, always having principles which he wished sustained by the legislation of his country, and always seeking political organization which would best promote this object. Mr. Wentworth has been remarkable, as a writer and speaker, for conveying his ideas in the fewest possible words, and for his success

in commanding the closest attention of promiscuous audiences; also for his habits of untiring industry, and for keeping such control of his private business that he has ever been personally independent of political results." Judge James B. Bradwell, who has been an intimate friend of Mr. Wentworth ever since his arrival in Chicago, thus condenses his estimate of the latter gentleman: "Few men in the nation have the intellectual capacity of Mr. Wentworth. He is strong in whatever he undertakes, and does it in his own peculiar way. He has been a power in this State and Nation. The old settlers know what influence he exercised in Congress and in the old Chicago Democrat for many years. The short and pointed paragraphs of the Democrat were a terror to the enemies of Mr. Wentworth. The influence of this paper in politics and the development of this country cannot be appreciated by those who were not here then."

Mr. Wentworth was one of the earliest Masons and Odd Fellows in Chicago. He stands six feet six inches high and weighs three hundred pounds, and has the reputation of being one of the most healthy and industrious men, and possessed of the greatest endurance of

any in the city of Chicago.

His full-size portrait, painted by the renowned George P. A. Healey, can be seen at the rooms of the Calumet Club, corner of Michigan Avenue and Twentieth Street; where his friends, the old settlers of Chicago, have their annual assemblage in May of every year.

OLD BLOCK HOUSE AND LIGHT HOUSE IN 1857.—THE LAST OF FORT DEARBORN.

## WOLF POINT AND EARLY HOTELS.

The few travelers and emigrants who came to the site of Chicago prior to 1831 had more difficulty in finding the true town than at present. The fort could be seen, and from a distance might be taken for the nucleus of the coming village, but its forbidding inclosure showed, on nearer approach, that it was exclusive property and no village or even place of temporary sojourn for the weary traveler, except as the guest of the officers of the garrison. That was not the village of Chicago at that time. In the fall of 1829, among others looking for a place to stop "over night" was the family of Elijah Wentworth. It consisted of himself, wife and two daughters, Zebiah, then nineteen years old; Susan, eighteen years of age, and George, then a child of

ARCHIBALD CALDWELL.

four years old. Whether Elijah, Jr., then twenty-six years old, came with his father, is a matter of doubt. He came soon afterward, if he was not at that time of the emigrant party. Elijah had come up from the Wabash country with three yoke of oxen, two covered wagons, containing all his household goods and earthly possessions, and, homesick, was trying to get back to Maine, where he was born. He was looking for Chicago as a point on the lake from which he might embark for the East. He arrived in October, 1829, and put up at the only tavern then having a sign-post. It was owned by James Kinzie who had built it the year before, and was then kept by Archibald Caldwell, who,

by virtue of his license, granted December 8 by the Commissioners of Peoria County, was, without doubt, the first landlord who ever legally kept tavern in Chicago.

The family found refuge at this tavern. It came on prematurely cold that year, and it was certain that the family must winter at Chicago. The oxen could not be sold here, and were accordingly sent back to the "Wabash country" to winter. The family rented a small log-house owned by Mr. Kinzie, standing on the shore of the South Branch some little distance south of Caldwell's tavern, at \$5 per month, and moved into it as a temporary home. While living there, Caldwell dissolved with Kinzie, left the hotel and removed to near Green Bay, Wis. Mr. Wentworth, in January or February, rented the hotel of Mr. Kinzie at \$300 per year and became its landlord. Here he remained until the fall of 1830, when he gave up his lease and took a claim eight miles north, near what is now the Jefferson Station on the Chicago & North-Western Railroad. There he kept a hotel uninterruptedly, except during the spring and summer of 1832, when for a few weeks he took refuge in the fort fearing Indian depredations. When Scott came with the cholera, he returned to his house with many other families who, like him, became panic stricken by the pestilence.

Who kept the tayern afterward known as the Wolf Tayern "the forks" had been known as Wolf Point long before during the year 1831, is not specially determined by the traditions or records of the period.

In addition to this first tavern there was another in 1830, kept by Samuel Miller. It stood on the east side of the North Branch, nearly opposite Wentworth's. He with his brother was living there in 1829, and kept a small store, besides entertaining such strangers as came along. In 1830, he having enlarged it materially, his place became known as a tavern, and he was the principal competitor of the "Forks Tavern" on the opposite side. He ran a ferry at that time to accommodate the travel and help along his own trade.\* There was at that time no bridge. Mr. Miller kept the hotel until the death of his wife, in 1832, when he sold out and moved away. It was never known as a hotel after Miller left it; various families lived in it temporarily, and at one time it was used as a store.

Mark Beaubien had his log house, also a tavern, on the South Side, on the point made by the junction of the two branches. It was not at that time a pretentious hostelry. He afterward added to it and kept one of the most famous hotels in the city, known as the Sauganash.

These three hotels, connected only by a primitive ferry, with a few scattering buildings on the West Side, made the only pretense of a village at Chicago in 1830, and was known as "The Forks." and as Wolf Point. The origin of the name is buried in oblivion. Mrs. Juliette A. Kinzie, authoress of "Waubun," came here in the winter of 1831, and, at that early day discussed the origin of the name as shrouded in mystery, then too old to be traced to its genesis. She states that at that

<sup>\*</sup> The county, in 1831, when Mark Beaubien took the ferry established by law, bought Miller's scow. See Colbert's History, p. 5.

time 1831 it was known as Wolf Point, and suggested some quite plausible origins for the name; among others, that it was the former residence of an Indian chief, whose name, translated into English, means "Wolf." The value of Mrs. Kinzie's testimony lies, not in her fanciful legend, but in the historic fact that at that time the land lying about "the forks" was known as "Wolf Point," and that the origin of the name was at that early day not known. As to the name and many other facts concerning Wolf Point, and the early taverns, Mr. Gurdon S. Hubbard, the oldest living citizen of Chicago, wrote the following letter to Rufus Blanchard, which is embodied in his History of the Northwest. See pp. 757-59.

what was then called the Forks. About this date Samuel Miller bought a small log cabin on the opposite side of the river from Wentworth's, and south of the present Kinzie-street bridge, to which he added a two-story log building, finishing the outside with split clapboards.

These two public houses were the first Chicago could boast of.

Miller by his influence and enterprise, erected a bridge built wholly of logs, across the North Branch, just north of the forks house getting the most patronage, James and Robert Kinzie built stores there, and here resorted some of the officers of the fort daily for social intercourse and 'drinks' at Wentworth's bar. Wolves were in those days quite numerous; one had the audacity to enter in the day time Wentworth's meat-house, and was by him killed. His house had for a sign a tall sapling topped off just above a prominent branch; it extended some distance above the top of the roof, and was a conspicuous notice, to be seen from the prairie and surroundings, that there was food for man

WOLF POINT IN 1830

"CHICAGO, October 13, 1880.

" RUFUS BLANCHARD:

"My Dear Sir-Vour favor of 11th is at hand, and I most cheerfully give you what information I possess on the subject mat-

Prior to 1500 the North Branch of the Chicago River was ealled by the Indian traders and voyageurs 'River Guarie,' and the South Branch 'Portage River.' On the west side of the North Branch a man by the name of Guarie had a trading-house, situated Branch a man by the name of Guarie had a trading-house, situated on the bank of the river about where Fulton Street now is. This house was inclosed by pickets. He located there prior to 1778. This tradition I received from Messrs. Antoine Deschamps and Antoine Beson, who, from about 1778, had passed from Lake Michigan to the Illinois River yearly; they were old men when I first knew them in 1848. This tradition was corroborated by other old voyagers The evidences of this trading-house were pointed out to me by Mr. DesChamps; the corn hills adjoining were distinctly traceable, though grown over with grass.

I am of opinion that these branches retained their names until about the time of the location of the first Fort Dearborn, and were afterwards known as the North and South branches.

"My impression is that Elijah Wentworth opened his tavern on the West Side, near the present West Kinzie Street, in 1830, at

and beast; 'it lacked, however, something to hang to the branch projection, to give it character; how to obtain a proper emblem puzzled the good landlord, as there was no carpenter or paint shop, puzzled the good landlord, as there was no carpenter or paint shop, or citizen artist; a happy thought struck him, that Lieutenant Allen might condescend to supply the deficiency, if properly approached; this was effected through a mutual friend. The boards of a drygoods box were obtained, from which was put in shape, under the superintendence of Lieutenant James Allen, a well-proportioned sign, the Indian Agency blacksmith putting to it hinges, when Lieutenant Allen took it in hand again, producing and presenting to Wentworth the picture of the slethy wolf, which was to serve no only an attractive painting, but a memorial of the landlord's valor in the killing alone and unaided, of a ferocious wolf. Officers and citizens received invitations to be present at the handing of the citizens received invitations to be present at the hanging of the sign; the day and hour arriving, found assembled a majority of the people; the sign was brought forth, duly veiled with a blanket, was attached to the branch of the pole, the veil removed, and it swung gracefully, and was greeted with hurrahs from those present; in turn something else greeted the hoarse throats of friends. was produced and baptized the name of 'Wolf Point.

Besides Wolf Point was a place called Hard Scrabble, of

early historic interest.

'Mrs. John H. Kinzie in her book, 'Waubun,' correctly

describes the location as 'Lee's Place,' Mack & Conant, extensive merchants at Detroit, in the Indian trade, became the owners of this property about the year 1816. They sent Mr. John Craft with a large supply of Indian goods to take possession of it, and establish a branch of their house there, the principal object being to sell goods to such traders as they could residing throughout this country, without interfering with the interests of those traders who purchased goods from him.

Mr Craft repaired the dilapidated building, adding thereto, and erecting others necessary for the convenience of business. He, I think, named it 'llard Scrabble;' whether he or some one else,

it bore that name in 1818.

"At the organization of the American Fur Company, 1816, Mr. Astor's plan was to control the entire trade by absorbing other companies doing an Indian business. He succeeded in buying out the Southwest Company, whose headquarters were at Mackinaw, but failed in his efforts to buy out Mack & Conant.

entitled to more than ordinary credence. The honesty of the writer is not questioned, and his own desire to vindicate the truth of history is shown in the following corrections made with his assent, after an interview with him on February 3, 1884, at which time the letter was read to him. The corrections made were on the following basis of conflicting facts: (1) Mr. Wentworth was not keeping the tavern after the close of 1831; 2 Lieutenant James Allen, as appears from the records and his letters now on file with the Chicago Historical Society, was not here until May 14, 1833. Hence, either Mr. Allen did not paint the sign, or Mr. Wentworth was not the landlord at the time it was painted. It was decided, as probable, that the sign was not

DEARBORN STREET DRAWBRIDGE, BUILT IN 1834.

"Mr. James Abbott, however, their agent at Detroit, succeeded in buying them out in 1820 or 1821, and they withdrew from the Indian trade, transferring their Indian goods, posts and good will to the American Fur, who constituted Mr. Craft their agent here, he removing his quarters from 'Hard Scrabble' to the company's warehouse, located north of, and adjoining, the military burying-ground. They enlarged it and built a log warehouse, besides; J. B. Beaubien, who had previously occupied it, removing to the 'Factor House,' adjoining Fort Dearborn. Craft died in the fall of 1826 and Mr. John Kinzie succeeded him. William W. Wallace (who was one of Astor's men on his expedition to Columbia River) took possession of 'Hard Scrabble' after Mr. Craft had left the place, and died there during the winter of 1827-28. From that time till the land title passed from the Government, it was occupied by several families, temporarily, among whom were the Lawtons, for a short time, and James Galloway, the father of Mrs. Archibald Clybourne.

bourne,
'Vours truly
'G. S. Hubbard."

The foregoing letter gives a circumstantial account of the painting and raising of the wolf sign at the old Wentworth tavern. The letter is of great historical value, and from the known reliability of its author is painted or hung until 1833, at which time either Charles Taylor, or his successor, William Wattles, was the landlord. That a sign bearing the image of a wolf, rudely painted, once swung from the pole of the old Wentworth tavern, can scarcely be doubted, but it is also quite certain that it was not put up until long after Wentworth left the hotel-probably in 1833. Zebiah Wentworth Estes, still living, remembers nothing of the sign; John Bates, still living, remembers a rough board sign, put up some time after he came here in the fall of 1832. So the wolf sign, the Wolf tavern, and the accompanying picture which lacks the sign afterward put up, become historically reconciled. In 1830, there was no sign at either of the taverns at Wolf Point, and no bridgesonly a ferry.\* In 1833, there was a sign of a wolf swung

<sup>\*</sup>A valuable thread of testimony was presented, too late for publication in its proper connection with the article concerning early bridges. It emhodies the result of a meeting of the old settlers whose names appear, held late in the fall of 1833, and was presented to the editors by John Bates, one of the signers. It reads as follows: "We all agree that the first bridge across the North Branch of the Chicago River was built in the winter of 1831 and 1832. The first bridge across the

from the sign-post of the old Wentworth tavern, and bridges across both the North and South branches.

These three taverns and Kinzie's store made Wolf Point the site of the real Chicago of 1830. The sale of the canal lots, the improvement of the harbor, the erection of warehouses, and, in fact, the evolution of a great city on the lake shore, changed the center of the town from Wolf Point to a region before not believed to be habitable, and that location lost its importance, which waned as its taverns died, and strangers sought board the house again changed hands, William W. Wattles becoming its proprietor and landlord. In November, he sold out to Chester Ingersoll, who ran it an uncertain length of time, first as the "Traveller's Home," and afterward as the Western Stage House. It went out of sight as a hotel in 1834.

With the wane of the hotel interest on the Point, its importance fell off, and with the great impulse of growing trade at the new town, with the erection of a firstclass hotel, the Lake House, and the removal of the

THE SAUGANASH HOTEL

and lodging in the new town and at new hotels. The old Wolf Hotel, after Wentworth left it, next came into the possession of Mr. and Mrs. Charles Taylor

post-office farther down town, it ceased all pretentions as the true Chicago after 1834. The movement of the center of business and the center of population until

Mr. Kinzie and family boarding with them in part payment for the rent. This was in 1832. In 1833,

South Branch was built in the winter of \$18.72 and \$18.72; and that both bridges were built on abutments and two 'bents.' The abutments were built of logs in the shallow water near the banks. The brits were of four heavy logs, resting on the bottom, in deeper water, stringers of heavy logs stretched from the abutments to the bents, and hetween the bents. On these stringers puncheons or split logs were laid for a floor. These bridges were about ten feet wide and without radiugs, for the first few years, after which guards, or radiugs, were added. These were both wagon bridges, and were about six feet above the South Branch stood till the spring of \$23, when it was going it was there in South Branch stood till the spring of \$23, when it was going it was there in some heavy timbers, which formed a flustrop bridge, only vide enough for four baseengers, or a well trained saddle-horse.

"Cleaver remembers driving across the first bridge over the North Branch; it was a wagon bridge, ten or twelve feet wide.

Mary A. Taylor

the great city absorbed all the various hamlets in one great whole, is traced by the building and success of the various early hotels. Following is a sketch of the early hotels other than the two Wolf Point taverns already sketched, which, by their success, marked the location and growth of the great city in its early days.

Mark Beaubien, whose name is inseparably linked with almost every chapter of Chicago's early history, was a famous hotel-keeper in his day. He came here in 1826, from Detroit. In 1831 he built, as he claimed, the first frame house in Chicago, the Sauganash Hotel. It is related that while he was at work on his house, Billy Caldwell Sauganash one day said to Beauhien, "I suppose you will name your new hotel after some great man?" "Yes," replied Beaubien, "I will. I

<sup>&</sup>quot;J. D. CATON,
"JOHN BATES,
"CHARLES CLEAVER,
"JOHN NOBLE,"

shall call it the 'Sauganash.'" He kept his word; the house became famous, and its name has gone into history as for years being the largest and finest hotel in Chicago. Mark, as is well known, was a jolly host; after having given his guests the best his larder afforded, he would of evenings tune up his violin, on which he was, for those days at least, a skilled performer, and often, till late at night, amuse and entertain them with his melody. Dancing, too, generally formed no small feature of these sports; and so the Sauganash became popular through the character of its proprietor as a musician as well as for its excellence as a hotel. This house was situated on the south side of Lake Street, at the corner of Market, though one or two old settlers have given the impression that it fronted as much on Market as on Lake. The accompanying illustration of the building, showing it as it appeared in 1833, has been pronounced by Hon. John Wentworth and by Charles R. Vandercook, who were in that year boarders at the hotel, a most excellent representation of it as it then was. It seems, too, that the cabin which Mr. Beaubien built when he came here stood on the site where, a few years later, he built the Sauganash Hotel. Mrs. Harriet Murphy, whose husband John Murphy was at different

Rearried & murphy

times proprietor of the hotel, states that the frame part was an addition built on to the cabin; and a writer who was at the hotel in the winter of 1833-34 says this room in the cabin, which was then weather-boarded on the outside, was the warmest and most comfortable place in town. Mr. Beaubien kept the Sauganash until 1834, when he left it, and in January, 1835, a Mr. Davis assumed control. Mr. Beaubien had meanwhile built a new house on the northwest corner of Wells and Lake streets. In August of 1834, Mr. and Mrs. Murphy took charge of this new hotel, which they christened the Exchange Coffee House. They remained there until 1836, when they removed to the old Sauganash, the name of which they changed to United States Hotel. Mr. Murphy continued business there until the following year, when he removed to the West Side, where he opened a new hotel under the same name he had given the old Sauganash, which was then converted into a theater-the first in Chicago. In 1839 the Sauganash was once more occupied as a hotel, being kept by Jesse Seymour until in 1840, when Mr. Murphy having leased his new West Side hotel, again became the proprietor of it. He remained there about a year and a half, when he again returned to the West Side to the United States Hotel, Mr. Smith having surrendered his lease. A man by the name of Davis next took the Sauganash but failing to make it pay, Mr. Murphy once more assumed its management, at the earnest solicitation of its owner, Augustus Garrett. Just how long he continued to run the house this time is not known, but it was probably in 1843 when he moved out. The next proprietor of the Sauganash was Jeduthan Brown, and he was succeeded in 1844 by L. M. Osterhaudt, who kept it for several years, when it passed into the control of M. & G. Walrod, who were its proprietors until 1848. From the directory of that year it appears that Newell Stratton had control, and in 1851 B. S. Foster wasi n charge at the time it was destroyed by fire. The conflagration which swept from existence, save in the memories only of those who had known for years this historic building, occurred at half-past 3 o'clock Tuesday morning, March 4, 1851; the following account of which is found in the Gem of the Prairie of March 8, 1851:

"At about half-past three o'clock last Tuesday morning flames were discovered issuing from the roof of the Sauganash Hotel on Market Street, between Lake and Randolph streets, and so rapid was their progress among the combustible materials in that vicinity that nine buildings were destroyed, before being finally subdued by the firemen. The buildings' destroyed were owned by the Carrett estate."

The account then mentions the occupants, and among the rest says, "Sauganash Hotel, B. S. Foster." Concerning the origin of the fire the article concludes.

"It is supposed that the fire was the work of an incendiary. Its supposition is strengthened by the fact that while the fire Monday evening was raging at the corner of Lake Street and Wabash Avenue, an unoccupied building adjoining the Sauganash Hotel was set on fire in an upper story, but was discovered and put out before making any considerable progress."

Thus ends the history of this notable building, which for so long was a prominent mark of interest in Chica

go's early days.

Another hotel and scarcely less noted in its time was the Green Tree Tavern, which stood on the northeast corner of Canal and Lake streets. It was built by James Kinzie in 1833, and opened for business by David Clock, who in a short time relinquished his proprietorship to Edward Parsons. The next proprietors were two young men, Snow and Spear, who kept it until 1838, when John Gray managed it until 1841. He sold out to George W. Rogers, who was its owner until 1845. During his time the house was known as the Chicago Hotel. The following year he was succeeded by F. A. McIntyre. From the directory of 1848 it is learned that J. W. Noyes was then running it under the name of Noves Hotel. In the next year it again changed hands and names, being called the Rail Road House, which title it held until 1851, when it became the Atlantic Hotel. Shortly after that year, Fred Meher took charge of the house and, in 1854, changed its name to the West Lake Street House. He continued to run it until 1859. Afterward it became a tenement house, having, however, a saloon in the lower front part. It remained standing at the corner of West Lake and Canal streets until 1880, when it was removed to Nos. 33, 35 and 37 Milwaukee Avenue, in order to make room for the American Iron Company's buildings which now occupy its former site. At this time 1884 the house still stands at the above numbers, and perhaps searcely one among the thousands who pass it daily are aware of its historic character or that it is one of the oldest buildings in existence in the city. There stands to-day on the southeast corner of Canal and Randolph streets a small two-story frame building, sadly dinged by age and exposure to the weather, for which the claim is made that it was the first frame house built on the West Side. In years now long since past it was known as the Western Hotel, and was built in 1835, as near as can be learned, by W. H. Stow, who came to Chicago in 1833. Mr. Stow was by trade an iron founder, and at one time had his shops on the rear end of the lot on which he later built his hotel. As he employed a number of men, his house was more of a boardinghouse for local custom than for the accommodation of the transient public. Mr. Stow kept the house until 1852, at which time he rented it to Martin Dodge and

William R. Irish, who, under the firm name of Dodge and Irish, conducted it until the following year, when Irish retired from the firm, being succeeded by A. P. Collar. The name of the house was, on the retirement of Mr. Stow from its management, changed to Commercial Hotel. Dodge & Collar remained the proprietors until early in 1854, when the building was partially destroyed by fire. After this it was rebuilt and in the years 1855-56 appears in the city directories as the Wilson House, kept by T. O. Wilson. With this terminated its career as a hotel or boarding-house. It is now occupied as a saloon, which is kept and owned by a son of the man who originally built and owned the house.

Chicago did, however, have a really grand hotel as early as 1835; this was the Lake House, located on the \$10,000. William Rickards was the next manager in 1844, and remained in charge several years, finally, however, leaving there to take control of the Sherman House. In 1854 the house was remodeled, inside, an additional story, with a handsome cupola added, and was opened as a first-class hotel by James E. Hays and M. M. Smalley. This firm remained the proprietors until in 1856, when Mr. Boardman took it and ran it until 1858. After repeated experiments to make it a financial success, all of which proved failures, the house was converted into residence flats and was so used until destroyed in the great fire of 1871.

From 1849 to 1852, Edward H. Aiken kept a hotel called the Lake Street House, situated at Nos. 135 and 137 Lake Street. In 1852 this house was destroyed by fire, and Mr. Aiken became the proprietor of the Gar-

THE GREEN TREE HOTEL.

corners of Kinzie, Rush and Michigan streets, fronting on the latter. This hotel, which was built of brick, was three stories and a basement in height, was elegantly furnished throughout, and cost its owners nearly \$100,000. The men whose enterprise led them into building a house which for those days was far in advance of the needs of the town, were Gurdon S. Hubbard, General David S. Hunter, John H. Kinzie, Dr. W. B. Egan and Major James B. Campbell. The hotel was completed and thrown open to the public in the autumn of 1836, Jacob Russel, of Middleton, Conn., assuming control of its management. In 1839 Mr. Russel left the Lake House to take charge of the City Hotel the predecessor of the Sherman House which had just been opened to the public, and George E. Shelley, of Baltimore, became the proprietor of the Lake House. Mr. Shelley introduced a French cook, printed bills of fare, and various other innovations in the management of the house. The following year Daniel S. Griswold succeeded Mr. Shelley in the management of the Lake House, and some years after this it was sold under a foreclosure of mortgage, by Hon. Isaac N. Arnold. attorney for the mortgagees, to Hon. Thomas Dyer, for

den City House, which then stood on the corner of Madison and Market streets. Mr. Aiken remained there until in 1855. The house then passed into the hands of R. and G. W. Storrs, who were its owners until 1859. Robert Hill next became its proprietor. Afterward the house was taken by Mr. Throop, the man who built it, and was conducted by him until it was, a few years latter, destroyed by fire. The large wholesale house of Marshall Field & Co. now (1884) occupies the corner where it formerly stood.

The Mansion House was built in 1831 by Dexter Graves; it stood on Lake near Dearborn and almost opposite the old Tremont House. As originally built, the Mansion House was situated some little distance back from the street, but two years later Mr. Graves erected a frame addition in the front, which came out to a line with the street. About this time he sold it to a Mr. Haddock, his son-in-law, who kept it until 1835 when it passed into the hands of Abram A. Markle, who, for two years thereafter accommodated and entertained many of Chicago's early residents, and travelers coming this way to take an observation of the "town lying in the mud."

In 1837 it was kept by Jason Gurley and two years later by Asher Rossiter. In 1844 Charles Skinner and J. F. Smith were its proprietors. The directory of 1845 shows it to have been in the hands of C. W. Cook. In 1848 Jacob R. Bates took it. Two years later the greater part of the house was removed to the northwest corner of Lake Street and Michigan Avenue, and was fitted up as a hotel under the name of the Dearborn House.

Among the minor houses in the year 1845 was the Eagle Tavern at Dearborn and South Water streets, the Farmer's Exchange on Lake Street near Wabash Avenue, and the Illinois Exchange, corner Wells and

Lake streets.

There were in 1839 the following minor taverns: the Columbian House, on the corner of Wells and South Water streets; the Shakespeare Hotel, corner of Kinzie and Rush streets; the Southern Hotel, corner of State and Twelfth streets; the Buffalo Hotel, on South Water Street; the Lake Street Coffee House, corner of Lake and Wells streets; the Ohio House, on LaSalle Street, and Myrick's Tavern (the Bull's Head) on Cottage Grove Avenue, near Twenty-ninth Street.

These hotels, which in the English sense, might more appropriately be called inns, were establishments which met a demand for modest accommodations,

peculiarly active in young and growing towns.

The New York House was built in 1834 and opened to the public the following year by Lathrop Johnson and George Stevens, who conducted it until the fall of 1839, when they were succeeded by L. M. Osterhoudt. He remained its keeper until 1843.

In 1849-50 W. R. Green and B. H. Skinner kept a hotel, known as the New York House, at 211 and 213 Randolph Street. A few years later the firm became Smith & Tiernan. In 1858 the house was still kept as a hotel by J. F. Smith, formerly of the firm of Smith

& Tiernan.

The United States Hotel, which has been mentioned so frequently in the account of the old Sauganash, was built by Mr. Murphy; it stood on Canal Street, near Randolph. The house changed hands often during its career, and at the time it burned, in 1852, was kept by David L. Rogers.

The Vermont House, which stood on Market Street. between Lake and Randolph streets, flourished in the days of the old Sauganash and was kept for years, in

fact until 1864, by Joshua Bell.

The American Temperance House, situated on the northwest corner of Lake Street and Wabash Avenue, was built by Asher Rossetter in 1840, and opened to the public in the spring of the following year. Charles W. Cook was its first proprietor, and kept it for a number of years, being succeeded by Jeduthan Brown; later Jason Gurley purchased an interest and the firm in 1845 was Brown & Gurley. Then A. J. Douglass took control, conducting the house until 1849, when it passed into the hands of Milton Barney, who continued its proprietor until 1852. In this year Mr. Rossetter took charge, changing the name to the American House,\* omitting the word "temperance." In the directory of 1854 "A. Rossetter & Co." are put down as proprietors; and it was probably at this time that John M. King had managing charge of the house. In the fall of 1854 W. R. Irish, who, it will be remembered, at one time kept the old Western Hotel, became the proprietor, conducting it until 1856. In the fall of that year, William Church and Charles Bissel took the house until 1858, when it again changed hands, L. P. Hill taking

See Udall & Hopkins' City Directory for 1852-53

control; he continued its proprietor until, in 1861, the house was torn down to make room for a business block which occupied its site until the fire of 1871.

The City Hotel, subsequently the Sherman House, was built in 1836-37 by Francis C. Sherman. Jacob Russel was its first proprietor, taking possession in December, 1837. In 1844, Mr. Sherman remodeled the house, added two stories, making it five stories high, and changed its name to the Sherman House. Two years later Mr. Russel retired from its management and was succeeded by James Williamson and A. H. Squier; the next year Mr Williamson retired from

marick colf

the firm, William Rickards purchasing his interest. This firm, Rickards & Squier, retained the proprietorship of the house until in 1851, when they sold out to Brown & Tuttle, late of the City Hotel, a building which then stood on Lake Street, near Wabash Avenue, and was formerly the Farmer's Exchange. In February of 1854, Mr. Brown sold his interest to A. H. Patmor. and until 1859 the firm was Tuttle & Patmor. In 1858 the proprietors were Martin Dodge and Hiram Longly.

In 1833, the first Tremont House, situated then on the northwest corner of Lake and Dearborn streets, was built by Alanson Sweet. It was kept as a saloon and boarding-house by him and a man from Canada, named Darwin. Then the Couch brothers purchased the property and Ira Couch opened it as a hotel. He ran it until 1836, when his brother James took control, and was managing it at the time it burned, October 27, 1839. In December of the same year the erection of

the new house was begun, on the corner where the present Tremont stands, and on the 20th of May, 1840, the building was completed. Both of these structures were of wood and far different in style and cost of construction from the costly edifice which to-day ranks among Chicago's leading hotels. The house, however, did a large business and prospered finely until July 21, 1849, when it was destroyed by fire. Its proprietors, however, immediately set to work rebuilding, this time a brick structure, which was opened in October, 1850. Ira Couch remained the proprietor until 1853, when the house passed into the hands of the Gage brothers, David A. and George W. Two years later John Drake, now of the Grand Pacific, was associated with them, and

in 1858 Gage Bros. & Drake were its proprietors. Speaking of the house in its earlier days, James Couch says that ofttimes they were so crowded that not only all the beds, but every available space of floor room, would at night be occupied by travelers, who were glad enough to get even a pallet on the floor. A single boat would bring two and three hundred passengers at a trip, and as the Tremont was a popular hotel, it was on such occasions taxed to its utmost for their accommodation.

The Steamboat Hotel, on North Water Street, near Kinzie, was kept in 1835 by John Davis, and from 1836 to 1839 by William McCorrister, as the American

Hotel.

The Chicago Temperance House in 1839 stood on La Salle Street, near Lake, and until 1844 was kept by by fire, and Mr. Barker removed to the corner of Wells and Randolph streets, taking charge of a hotel, then newly built, which he also christened the Baltic House. This house he kept until 1855, when O. V. Colby took it, changing its name to the Colby House. Mr. Colby remained there until in 1856-57, when the house was torn down and a new building, the Metropolitan Hotel, was erected in its stead.

For some years previous to the building of the Metropolitan, Isaac Speer, a worthy citizen, by trade a jeweler, conducted an extensive establishment at 77

FRINK & WALKER'S STAGE OFFICE.

David L. Roberts. In the following year it was taken by Augustus Dickinson, who kept it until 1849, when it was probably torn down or was no longer used as a hotel.

The new City Hotel, which stood on the corner of Lake and State streets, was erected in 1848. Before this, for some years, a wooden building under the same name occupied the same ground. When the new house was built, Jeduthan Brown was its proprietor, and the next year A. H. Tuttle became a partner. They conducted the house until 1851, when they went to the Sherman House. In 1856 the City Hotel was kept by John H. Thom and William F. Orcott, the next year by Orcott & Sutherland, and in 1858 by Richard Somers & Co.

In 1848 Peleg A. Barker kept the Baltic House, situated on the southwest corner of Dearborn and Randolph streets. Two years later this house was destroyed

Lake Street. He had in his employ a man named Howgate, in whom he reposed every confidence. At the end of the year 1853 Mr. Speer was astonished on balancing his books to discover that, notwithstanding a brisk trade and an apparent prosperous business, he was losing money. The mystery was wholly unexplainable. He, however, kept on, and the three years following showed precisely the same results; at this time. he found himself on the verge of bankruptcy, but with no satisfactory reasons apparent for his affairs being in so deplorable a condition. While he was thus lamenting his troubles, the news reached here that the detectives of St. Louis had unearthed, in that city, a lot of stolen jewelry, which bore the trade mark of Mr. Speer. Investigation followed, and the fact was disclosed that Howgate had been systematically robbing him for years, and mainly with the proceeds of his thefts, had commenced the erection of the Metropolitan

Hotel on the site formerly occupied by the Baltic. Howgate was apprehended, brought to trial, and the matter finally settled by Mr. Speer receiving the new hotel, in reparation for the losses he had sustained. In 1857 the Metropolitan was kept by John Mason and a man named Goodman.

The Matteson House was built in 1850 by C. H. Bissell, immediately following the destruction of the old Baltic, already mentioned. It was completed and opened to the public, with W. L. Pearce as proprietor, in the month of August of the following year. Mr. Pearce kept the house until 1854, when it passed into the hands of Herrick Stevens and J. P. Willard, who, under the firm name of Stevens & Willard, were its proprietors until 1859. In that year Charles H. Bissell and William S. Goodrich took it, and a few years later it was purchased by Robert Hill, who kept it until it

was destroyed in the fire of 1871.

In 1854, besides the hotels already mentioned, there were the following: The Bissell House, at 224 Lake Street, P. Bisself & Son, proprietors; the Bradley House, corner of Van Buren and Sherman streets, by Boyington & Turley; the Bull's Head, by H. Hopkins, at the head of Madison Street, where is now situated the Washingtonian Home; the Breman House, by C Nockin, at 245 South Clark Street; Doty's Hotel, by Theodoris Doty, at 64 and 66 Randolph Street; the Foster House, by Geiselman & Bro., Kinzie, corner of Clark; Hamilton House, by J. F. Draper & Co., at 14 North Clark; the Lake View House, by J. H. Rees, on the north lake shore; the McCardel House, McCardel & Crane, 17, 19 and 21 Dearborn; Merchant's, La Salle Street near South Water, by E. Moore; Naperville House, at 191 Randolph, by A. Schall; National Hotel, Randolph, near Peoria, by Brown & Crout; the New England House, at 40 Kinzie, by Briggs & Felthousen; the Philadelphia House, Washington, corner of Franklin, by Buest & Bunn; the Planter's House, by J. McDonald, Randolph, corner Wells; the Rock Island House, south end Clark Street, H. Longley; the Yorkshire House, J. Watson, Wells, near Randolph.

From this time up to 1859 the hotels of minor importance multiplied rapidly. Those of any prominence or worthy of mention, erected during this period, were: The Audubon House, Nos. 68 and 70 West Lake Street; the Boardman House, corner Clark and Harrison; the Briggs House, Randolph and Wells, built in 1854 by William Briggs and kept by John Floyd & George H. French, who were still its proprietors in 1857; the Cleveland House, also new, kept by A. Cleveland, at Nos. 46, 48, 50 and 52 West Lake; the Richmond House, corner South Water and Michigan Avenue; and the Young America, which stood on the southeast corner of Randolph and Dearborn, near Rice's theater. Of perhaps a score, the names of which have not been mentioned, it is only necessary to say that they were boarding houses, transitory, many of them, in their character, and not living long enough to become fixed or permanent houses of public entertain-

ment.

Family of Elijah Wentworth.—The following sketch of the family of Elijah Wentworth is compiled from the very authentic and elaborate work of John Wentworth, LL. D., entitled "The Wentworth Genealogy, English and American," published in 1878, in three volumes. Some additions and unimportant emendations have been made from the statements of Mrs. Zebiah Wentworth Estes, given during the summer of 1882.

ELIJAH WENTWORTH, son of Elijah and Rebecca

(Capen Wentworth, was born in Stoughten, Mass., September 25, 1776. He married, in 1798 or 1799, Lucy Walker, of Hampden, Maine, and, after his marriage, removed to Duck Trap, Maine. In 1817, with his family, he emigrated West; first to Kentucky; thence to Illinois, and thence to Dodgeville, Wis. He came to Chicago, in the fall of 1829.\*

In January, 1830, he opened the Wolf Point Hotel, which he rented of Mr. Kinzie and which he kept until late in the fall of that year, when he removed to a claim he had taken, eight miles northwest of the city, near where

Elizah Wentworth

Jefferson Station, on the Chicago & Northwestern Railroad, now is. Here he built quite a large log house and opened another tavern, which he kept uninteruptedly except during a short time when driven into refuge at Fort Dearborn during the Black Hawk War, in 1832, for many years. His wife died of cholera in Chicago, July 22, 1849. He died at the residence of his daughter, Mrs. Sweet, at St. Joseph, Mich. in November, 1863. He was buried in Chicago.

Their children were

Hiram, born in Vassalborough, Maine, April 22, 1800.

ELIJAH WENTWORTH, JR., was born in Lincolnville, Maine, March 30, 1803. He came to Chicago either in 1830 or 1831. He was elected, by a unanimous vote, the first Coroner of Cook County. He afterwards removed to Lyons, Cook County, where he kept the well-known Black Horn tavern. He was Postmaster for a while 1844. In 1875 he was living in Galesburg,

<sup>\*</sup> This date is given by Zebiah Wentworth.

Knox Co., Ill. He married, January 15, 1832, Eliza Jane Weed, Plainfield, Will Co., Ill. She died in Chicago, June 24, 1836; 2 he married Angelina, daughter of Demas Colton, Middletown, Conn. She died at East Hartford, Conn., July 25, 1858. 3 He married at Galesburg, June 13, 1864, Mrs. Elmira L. Myers widow. He died at Galesburg, November 18, 1875.

Eliza died young in Illinois.

Lucy, born in Lincolnville, Maine, October 25, 1807; married October 12, 1827, in Jo Daviess County, Ill., John Ray, Willow Springs, Wis. She died April 24, 1864.

Mary Wilson, born October 19, 1808; married 1 William Clark, Lewiston, Fulton Co., Ill. He died at Fort Winnebago, Wis., 1831. 2) John Holcomb. She died in 1834, at Pekin, Ill. Ruth Whitney, died in infancy in Lexington, Ky.

Zebiah Walker Estes, born in Hampden, Maine, April 19, 1810; married Elijah S. Estes, now of Bay View, Wis., September 4, 1836, where January, 1884, she is still living.

Susan, born in Hampden, Maine, July 12, 1811; married 1 July 1, William Anderson; [2] Charles Sweet, February 16, 1836, moved to St. Joseph, Mich., where she died, March 25, 1882.

Isaac died in infancy in Ohio, about 1813.

George H., born September 9, 1815, near Lexington. Ky. Now, 1884, living in the town of Lake, Wis.

VIEW ON CLARK STREET IN 1857.
